INTRODUCTION.

THAT nothing external is perceived till first it make an impression upon the organ of sense, is an observation that holds equally in every one of the external senses. But there is a difference as to our knowledge of that impression: in touching, tasting, and smelling, we are sensible of the impression; that, for example, which is made upon the hand by a stone, upon the palate by an apricot, and upon the nostrils by a rose: it is otherwise in seeing and hearing; for I am not sensible of the impression made upon my eye, when I behold a tree; nor of the impression made upon my ear, when I listen to a song*. This difference in the manner of perceiving external objects, distinguisheth remarkably hearing and seeing from the other senses; and I am ready to shew, that it distinguisheth still more remarkably the feelings of the former from those of the latter: every feeling, pleasant or painful, must be in the mind; and yet because in tasting, touching, and smelling, we are sensible of the impression made upon the organ, we unavoidably place there also the pleasant or painful feeling caused by that impression †: but with respect to seeing and hearing, being insensible of the organic

* See the Appendix, § 13.
† After the utmost efforts, we find it beyond our power to conceive the flavour of the rose to exist in the mind: we are necessarily led to conceive that pleasure as existing in the nostrils along with the impression made by the rose upon that organ. And the same will be the result of experiments with respect to every feeling of taste, touch, and smell. Touch affords the most satisfactory experiments. Were it not that the delusion is detected by philosophy, no person would hesitate to pronounce, that the pleasure arising from touching a smooth, soft, and velvet surface, has its existence at the ends of the fingers, without once dreaming of its existing any where else.
organick impression, we are not misled to assign a wrong place to the pleafant or painful feelings caufed by that impression; and therefore we naturally place them in the mind, where they really are: upon that account, they are conceived to be more refined and spiritual, than what are derived from tasting, touching, and smelling; for the latter feelings feeming to exist externally at the organ of fenfe, are conceived to be merely corporeal. The pleafures of the eye and the ear being thus elevated above those of the other external fenfes, acquire so much dignity as to become a laudable entertainment. They are not, however, set upon a level with the purely intellectual; being not less inferior in dignity to intellectual pleasures, than superior to the organic or corporeal: they indeed refeemble the latter, being, like them, produced by external objects; but they also refeemble the former, being, like them, produced without any fenfible organic impression. Their mixt nature and middle place between organic and intellectual pleasures, qualify them to associate with both: beauty heightens all the organic feelings, as well as the intellectual: harmony, though it afpires to inflame devotion, disdains not to improve the relifh of a banquet. The pleafures of the eye and the ear have other valuable properties beside those of dignity and elevation: being sweet and moderately exhilarating, they are in their tone equally defiant from the turbulence of passion, and the languor of indolence; and by that tone are perfectly well qualified, not only to revive the spirits when funk by fenfual gratification, but also to relax them when overstrained in any violent purfuit. Here is a remedy provided for many diftreffes: and to be convinced of its salutary effects, it will be fufficient to run over the following particulars. Organic pleafures have naturally a short duration; when prolonged, they lose their relifh; when indulged to excefs, they beget satiety and disguft: and to relieve us from such uneafines, nothing can be more happily contrived than the exhilarating pleasures of the eye and ear, which take place imperceptibly, without much varying the tone of mind. On the other hand, any intense exercife of intellectual powers, becomes painful by overstraining the mind:
INTRODUCTION.

Ceasing from such exercise gives not instant relief; it is necessary that the void be filled with some amusement, gently relaxing the spirits*: organic pleasure, which hath no relish but while we are in vigour, is ill qualified for that office; but the finer pleasures of sense, which occupy without exhausting the mind, are excellently well qualified to restore its usual tone after severe application to study or business, as well as after satiety from sensual gratification.

Our first perceptions are of external objects, and our first attachments are to them. Organic pleasures take the lead: but the mind, gradually ripening, relisheth more and more the pleasures of the eye and ear; which approach the purely mental, without exhausting the spirits; and exceed the purely sensual, without danger of satiety. The pleasures of the eye and ear have accordingly a natural aptitude to draw us from the immoderate gratification of sensual appetite; and the mind, once accustomed to enjoy a variety of external objects without being sensible of the organic impression, is prepared for enjoying internal objects where there cannot be an organic impression. Thus the author of nature, by qualifying the human mind for a succession of enjoyments from low to high, leads it by gentle steps from the most groveling corporeal pleasures, for which only it is fitted in the beginning of life, to those refined and sublime pleasures which are suited to its maturity.

But we are not bound down to this succession by any law of necessity: the God of nature offers it to us, in order to advance our happiness; and it is sufficient, that he hath enabled us to carry it on in a natural course. Nor has he made our task either disagreeable or difficult: on the contrary, the transition is sweet and easy, from corporeal pleasures to the more refined pleasures of sense; and not less so, from these to the exalted pleasures of morality and religion. We stand therefore engaged in honour, as well as interest, to second the purposes of nature, by cultivating the pleasures of the eye and

* Du Bos judiciously observes, that silence doth not tend to calm an agitated mind; but that soft and slow music hath a fine effect.
and ear, those especially that require extraordinary culture*, such as arise from poetry, painting, sculpture, music, gardening, and architecture. This especially is the duty of the opulent, who have leisure to improve their minds and their feelings. The fine arts are contrived to give pleasure to the eye and the ear, disregarding the inferior senses. A taste for these arts is a plant that grows naturally in many soils; but, without culture, scarce to perfection in any soil: it is susceptible of much refinement; and is, by proper care, greatly improved. In this respect, a taste in the fine arts goes hand in hand with the moral sense, to which indeed it is nearly allied: both of them discover what is right and what is wrong: fashion, temper, and education, have an influence to vitiate both, or to preserve them pure and untainted: neither of them are arbitrary nor local; being rooted in human nature, and governed by principles common to all men. The design of the present undertaking, which aspires not to morality, is, to examine the sensitive branch of human nature, to trace the objects that are naturally agreeable, as well as those that are naturally disagreeable; and by these means to discover, if we can, what are the genuine principles of the fine arts. The man who aspires to be a critic in these arts, must pierce still deeper: he must acquire a clear perception of what objects are lofty, what low, what proper or improper, what manly, and what mean or trivial. Hence a foundation for reasoning upon the taste of any individual, and for passing sentence upon it: where it is conformable to principles, we can pronounce with certainty, that it is correct; otherwise, that

* A taste for natural objects is born with us in perfection; for relishing a fine countenance, a rich landscape, or a vivid colour, culture is unnecessary. The observation holds equally in natural sounds, such as the singing of birds, or the murmuring of a brook. Nature here, the artificer of the object as well as of the percipient, hath accurately suited them to each other. But of a poem, a cantata, a picture, or other artificial production, a true relish is not commonly attained without some study and much practice.

INTRO-
that it is incorrect, and perhaps whimsical. Thus the fine arts, like morals, become a rational science; and, like morals, may be cultivated to a high degree of refinement.

Manifold are the advantages of criticism, when thus studied as a rational science. In the first place, a thorough acquaintance with the principles of the fine arts, redoubles the pleasure we have in them. To the man who resigns himself entirely to sentiment or feeling, without interposing any sort of judgment, poetry, music, painting, are mere pastime: in the prime of life, indeed, they are delightful, being supported by the force of novelty, and the heat of imagination: but when no longer thus supported, they lose their relish; and are generally neglected in the maturity of life, which disposes to more serious and more important occupations. To those who deal in criticism as a regular science, governed by just principles, and giving scope to judgment as well as to fancy, the fine arts are a favourite entertainment; and in old age maintain that relish which they produce in the morning of life.*

In the next place, a philosophic inquiry into the principles of the fine arts, inures the reflecting mind to the most enticing sort of logic: the practice of reasoning upon subjects so agreeable tends to a habit; and a habit, strengthening the reasoning faculties, prepares the mind for entering into subjects more difficult and abstract. To have, in this respect, a just conception of the importance of criticism, we need but reflect upon the common method of education; which, after some years spent in acquiring languages, hurries us, without the least preparatory discipline, into the most profound philosophy. A more effectual method to alienate the tender mind from abstract science, is beyond the reach of invention: and accordingly, with respect to such speculations, the bulk of our youth contract a sort of hobgoblin terror, which is seldom, if ever, subdued. Those who

* "Though logic may subsist without rhetoric or "poetry, yet so necessary to these last is a sound and "correct logic, that without it they are no better than "warbling trifles." Hermes, p. 6.
who apply to the arts, are trained in a very different manner: they are led, step by step, from the easier parts of the operation, to what are more difficult; and are not permitted to make a new motion, till they be perfected in those which go before. Thus the science of criticism may be considered as a middle link, connecting the different parts of education into a regular chain. This science furniseth an inviting opportunity to exercise the judgment: we delight to reason upon subjects that are equally pleasant and familiar: we proceed gradually from the simpler to the more involved cases: and in a due course of discipline, custom, which improves all our faculties, bestows acuteness upon those of reason, sufficient to unravel all the intricacies of philosophy.

Nor ought it to be overlooked, that the reasonings employ'd upon the fine arts are of the same kind with those which regulate our conduct. Mathematical and metaphysical reasonings have no tendency to improve social intercourse; nor are they applicable to the common affairs of life: but a just taste of the fine arts, derived from rational principles, furnishes elegant subjects for conversation, and prepares us for acting in the social state with dignity and propriety.

The science of rational criticism tends to improve the heart not less than the understanding. It tends, in the first place, to moderate the selfish affections: by sweetening and harmonizing the temper, it is a strong antidote to the turbulence of passion and violence of pursuit: it procures to a man so much mental enjoyment, that in order to be occupied, he is not tempted to deliver up his youth to hunting, gaming, drinking; nor his middle age to ambition; nor his old age to avarice. Pride and envy, two disgusting passions, find in the constitution no enemy more formidable than a delicate and discerning

* If any youth of a splendid fortune and English education stumble perchance upon this book and this passage, he will pronounce the latter to be empty declamation. But if he can be prevailed upon to make the experiment, he will find, much to his satisfaction, every article literally true.
INTRODUCTION.

discerning taste: the man upon whom nature and culture have bestowed this blessing, feels great delight in the virtuous dispositions and actions of others: he loves to cherish them, and to publish them to the world: faults and failings, it is true, are to him not less obvious; but these he avoids, or removes out of sight, because they give him pain. On the other hand, a man void of taste, upon whom even striking beauties make but a faint impression, indulges pride or envy without control, and loves to brood over errors and blemishes. In a word, there are other passions, that, upon occasions, may disturb the peace of society more than those mentioned; but none of the other passions is so unwearied an antagonist to the sweets of social intercourse: pride and envy put a man perpetually in opposition to others; and dispose him to relish bad more than good qualities, even in a companion. How different that disposition of mind, where every virtue in a companion or neighbour, is, by refinement of taste, set in its strongest light; and defects or blemishes, natural to all, are suppressed, or kept out of view!

In the next place, delicacy of taste tends not less to invigorate the social affections, than to moderate those that are selfish. To be convinced of this tendency, we need only reflect, that delicacy of taste necessarily heightens our feeling of pain and pleasure, and of course our sympathy, which is the capital branch of every social passion. Sympathy in particular invites a communication of joys and sorrows, hopes and fears: such exercise, soothing and satisfactory in itself, is necessarily productive of mutual good-will and affection.

One other advantage of rational criticism is reserved to the last place, being of all the most important; which is, that it is a great support to morality. Inflict on it with entire satisfaction, that no occupation attaches a man more to his duty than that of cultivating a taste in the fine arts: a just relish of what is beautiful, proper, elegant, and ornamental, in writing or painting, in architecture or gardening, is a fine preparation for the same just relish of these qualities in character and behaviour. To the man who has acquired a taste so acute and accomplished, every action wrong or improper, must be
be highly disgusting: if, in any instance, the overbearing power of passion sway him from his duty, he returns to it upon the first reflection, with redoubled resolution never to be sway'd a second time: he has now an additional motive to virtue, a conviction derived from experience, that happiness depends on regularity and order, and that a disregard to justice or propriety never fails to be punished with shame and remorse.*

Rude ages exhibit the triumph of authority over reason: Philosophers antiently were divided into sects, being Epicureans, Platonists, Stoics, Pythagoreans, or Sceptics: the speculative relied no farther upon their own judgment than to chuse a leader, whom they implicitly followed. In later times, happily, reason hath obtained the ascendant: men now assert their native privilege of thinking for themselves, and disdain to be ranked in any sect, whatever be the science. I must except criticism, which, by what fatality I know not, continues to be not less flavish in its principles, nor less submissive to authority, than it was originally. Boslú, a celebrated French critic, gives many rules; but can discover no better foundation for any of them, than the practice merely of Homer and Virgil, supported by the authority of Aristotle: Strange! that in so long a work, he should never once have stumbled upon the question, Whether, and how far, do these rules agree with human nature? It could not surely be his opinion, that these poets, however eminent for genius, were intitled to give laws to mankind; and that nothing now remains but blind obedience to their arbitrary will: if in writing they followed no rule, why should they be imitated? if they studied

* Genius is allied to a warm and inflammable constitution, delicacy of taste to calmness and sedateness. Hence it is common to find genius in one who is a prey to every passion; which can scarce happen with respect to delicacy of taste. Upon a man possest of that being, the moral duties, not less than the fine arts, making a deep impression, counterbalance every irregular desire; at the same time, a temper calm and sedate is not easily moved, even by a strong temptation.
INTRODUCTION.

studied nature, and were obsequious to rational principles, why should these be concealed from us?

With respect to the present undertaking, it is not the author's intention to compose a regular treatise upon each of the fine arts; but only, in general, to exhibit their fundamental principles, drawn from human nature, the true source of criticism. The fine arts are calculated for our entertainment, or for making pleasant impressions; and, by that circumstance, are distinguished from the useful arts: but in order to make pleasant impressions, we ought, as above hinted, to know what objects are naturally agreeable, and what naturally disagreeable. This subject the author has attempted, as far as is necessary for unfolding the genuine principles of the fine arts; and he assumes no merit from his performance, but that of evincing, perhaps more distinctly than hitherto has been done, that these principles, as well as every just rule of criticism, are founded upon the sensitive part of our nature. What the author hath discovered or collected upon that interesting subject, he chuses to impart in the gay and agreeable form of criticism; imagining that this form will be more relished, and perhaps be not less instructive, than a regular and laboured disquisition. His plan is, to ascend gradually to principles, from facts and experiments; instead of beginning with the former, handled abstractively, and descending to the latter. But though criticism be thus his only declared aim, he will not dilate, that all along it has been his view, to explain the nature of man, considered as a sensitive being capable of pleasure and pain: and though he flatters himself with having made some progress in that important science; he is however too sensible of its extent and difficulty, to undertake it professedly, or to avow it as the chief purpose of the present work.

To censure works, not men, is the just prerogative of criticism; and accordingly all personal censure is here avoided, unless where necessary to illustrate some general proposition. No praise is claimed on that account; because censuring with a view merely to find fault, cannot be entertaining to any person of humanity. Writers, one should imagine, ought, above all others, to be reserved
INTRODUCTION.

Termed upon that article, when they lie so open to re-
taliation. The author of this treatise, far from being
confident of meritsing no censuer, entertain not even
the slighteft hope of such perfection. Amufement was
at first the sole aim of his inquiries: proceeding from
one particular to another, the subject grew under his
hand; and he was far advanced before the thought struck
him, that his private meditations might be publicly use-
ful. In public, however, he would not appear in a flo-
venly drefs; and therefore he pretends not otherwise to
apologize for his errors, than by observing, that in a
new subject, not less nice than extincte, errors are in
some measure unavoidable. Neither pretends he to jus-
tify his taste in every particular: that point must be ex-
tremely clear, which admits not variety of opinion; and
in some matters susceptible of great refinement, time is
perhaps the only infallible touchstone of taste: to this
he appeals, and to this he cheerfully submits.

N. B. The Elements of Criticism, meaning
the whole, is a title too assuming for this work. A
number of these elements or principles are here unfold-
ed: but as the author is far from imaginging, that he has
completed the lift, a more humble title is proper, such
as may express any undetermined number of parts less
than the whole. This he thinks is signified by the title
he has chosen, viz. Elements of Criticism.
O

F all the fine arts, painting only and sculpture are in their nature imitative. An ornamented field is not a copy or imitation of nature, but nature itself embellished. Architecture deals in originals, and copies not from nature. Sound and motion may in some measure be imitated by music; but for the most part, music, like architecture, deals in originals. Language copies not from nature, more than music or architecture; unless where, like music, it is imitative of sound or motion: in the description, for example, of particular sounds, language sometimes furniseth words, which, beside their customary power of exciting ideas, resemble by their softness or harshness the sound described; and there are words, which, by the celerity or slowness of pronunciation, have some resemblance to the motion they signify. This imitative power of words goes one step farther: the loftiness of some words, makes them proper symbols of lofty ideas; a rough subject is imitated by harsh-sounding words; and words of many syllables pronounced slow or smooth, are naturally expressive of grief and melancholy. Words have a separate effect on the mind, abstracting from their signification and from their imitative power: they are more or less agreeable to the ear, by the fulness, sweetness, faintness, or roughness of their tones.

These are but faint beauties, being known to those only who have more than ordinary acuteness of perception. Language possessest a beauty superior greatly in degree,
degree, of which we are eminently sensible when a thought is communicated with perspicuity and sprightliness. This beauty of language, arising from its power of expressing thought, is apt to be confounded with the beauty of the thought itself; which beauty of thought is transferred to the expression, and makes it appear more beautiful*. But these beauties, if we wish to think accurately, must be distinguished from each other: they are in reality so distinct, that we sometimes are conscious of the highest pleasure language can afford, when the subject expressed is disagreeable; a thing that is loathsome, or a scene of horror to make one's hair stand on end, may be described in a manner so lively, as that the disagreeableness of the subject shall not even obscure the agreeableness of the description. The causes of the original beauty of language considered as significant, which is a branch of the present subject, will be explained in their order. I shall only at present observe, that this beauty is the beauty of means fitted to an end, that of communicating thought: and hence it evidently appears, that of several expressions all conveying the same thought, the most beautiful, in the sense now mentioned, is that which in the most perfect manner answers its end.

The several beauties of language above mentioned, being of different kinds, ought to be handled separately. I shall begin with those beauties of language that arise from sound; after which will follow the beauties of language considered as significant: this order appears natural; for the sound of a word is attended to, before we consider its signification. In a third section come those singular beauties of language that are derived from

* Chap. 2. part 1. sect. 5. Demetrius Phalereus (of Elocution, sect. 75.) makes the same observation. We are apt, says that author, to confound the language with the subject; and if the latter be nervous, we judge the former to be so also. But they are clearly distinguishable; and it is not uncommon to find subjects of great dignity dressed in mean language. Theopompus is celebrated for the force of his diction; but erroneously: his subject indeed has great force, but his style very little.
a resemblance between sound and signification. The beauties of verse are handled in the last section: for though the foregoing beauties are found in verse as well as in prose, yet verse has many peculiar beauties, which for the sake of connection must be brought under one view; and versification, at any rate, is a subject of so great importance, as to deserve a place by itself.

**S E C T. I.**

*Beauty of language with respect to sound.*

In handling this subject, the following order appears the most natural. The sounds of the different letters come first: next, these sounds as united in syllables: third, syllables united in words: fourth, words united in a period: and in the last place, periods united in a discourse.

With respect to the first article, every vowel is founded with a single expiration of air from the wind-pipe, through the cavity of the mouth. By varying this cavity, the different vowels are founded: for the air in passing through cavities differing in size, produceth various sounds, some high or sharp, some slow or flat; a small cavity occasions a high sound, a large cavity a low sound. The five vowels accordingly, pronounced with the same extension of the wind-pipe, but with different openings of the mouth, form a regular series of sounds, descending from high to low, in the following order, i, e, a, o, u.* Each of these sounds is agreeable to the ear: and if it be inquired which of them is the most agreeable, it is perhaps the safest side to hold, that there is no universal preference of any one before the rest: probably those vowels which are the farthest removed from the extremes, will be the most relished. This is all I have to remark upon the first article: for consonants being letters that of themselves have no sound, serve only in conjunction with vowels to form articulate

* In this scale of sounds, the letter i must be pronounced as in the word *interest*, and as in other words beginning with the syllable *in*; the letter e as in *persuasion*; the letter a as in *hat*; and the letter u as in *number.*
articulate sounds; and as every articulate sound of this kind makes a syllable, consonants come naturally under the second article; to which therefore we proceed.

All consonants are pronounced with a less cavity than any of the vowels; and consequently they contribute to form a sound still more sharp than the sharpest vowel pronounced single. Hence it follows, that every articulate sound into which a consonant enters, must necessarily be double, though pronounced with one expiration of air, or with one breath, as commonly expressed: the reason is, that though two sounds readily unite, yet where they differ in tone, both of them must be heard if neither of them be suppressed. For the same reason, every syllable must be composed of as many sounds as there are letters, supposing every letter to be distinctly pronounced.

We next inquire, how far articulate sounds into which consonants enter, are agreeable to the ear. Few tongues are so polished, as entirely to have rejected sounds that are pronounced with difficulty; and it is a noted observation, That such sounds are to the ear harsh and disagreeable. But with respect to agreeable sounds, it appears, that a double sound is always more agreeable than a single sound: every one who has an ear must be sensible, that the diphthong \( \text{ai} \) or \( \text{ai} \) is more agreeable than any of these vowels pronounced singly: the same holds where a consonant enters into the double sound; the syllable \( \text{le} \) has a more agreeable sound than the vowel \( \text{e} \), or than any vowel. And in support of experience, a satisfactory argument may be drawn from the wisdom of Providence: speech is bestowed upon man, to qualify him for society; and the provision he hath of articulate sounds, is proportioned to the use he hath for them: but if sounds that are agreeable singly were not also agreeable in conjunction, the necessity of a painful selection would render language intricate and difficult to be attained in any perfection; and this selection, at the same time, would tend to abridge the number of useful sounds, so as perhaps not to leave sufficient for answering the different ends of language.

In this view, the harmony of pronunciation differs widely from that of music properly so called: in the latter
latter are discovered many sounds singly agreeable, that in conjunction are extremely disagreeable; none but what are called concordant sounds having a good effect in conjunction: in the former, all sounds singly agreeable, are in conjunction concordant; and ought to be, in order to fulfill the purposes of language.

Having discussed syllables, we proceed to words; which make a third article. Monosyllables belong to the former head: polysyllables open a different scene. In a cursory view, one will readily imagine, that the agreeableness or disagreeableness of a word with respect to its sound, should depend upon the agreeableness or disagreeableness of its component syllables: which is true in part, but not entirely; for we must also take under consideration, the effect of syllables in succession.

In the first place, syllables in immediate succession, pronounced, each of them, with the same or nearly the same aperture of the mouth, produce a succession of weak and feeble sounds; witness the French words *dit-il, pathétique*: on the other hand, a syllable of the greatest aperture succeeding one of the smallest, or the opposite, makes a succession, which, because of its remarkable disagreeableness, is distinguished by a proper name, *viz. hiatus*. The most agreeable succession, is, where the cavity is increased and diminished alternately within moderate limits. Examples, *alternative, longevity, pusillanimous*. Secondly, words consisting wholly of syllables pronounced slow, or of syllables pronounced quick, commonly called long and short syllables, have little melody in them; witness the words *petitioner, frutterer, dizziness*: on the other hand, the inter-mixture of long and short syllables is remarkably agreeable; for example, *degree, repent, wonderful, altitude, rapidity, independent, impetuosity*. The cause will be explained afterward, in treating of versification.

A 4

*Italian words, like those of Latin and Greek, have this property almost universally: English and French words are generally deficient; in the former, the long syllable being removed from the end as far as the sound will permit; and in the latter, the last syllable being generally long. For example, Senator in English, Senator in Latin, and Senateur in French.*
Distinguishable from the beauties above mentioned, there is a beauty of some words which arises from their signification: when the emotion raised by the length or shortness, the roughness or smoothness, of the sound, resembles in any degree what is raised by the sense, we feel a very remarkable pleasure. But this subject belongs to the third section.

The foregoing observations afford a standard to every nation, for estimating, pretty accurately, the comparative merit of the words that enter into their own language; but they are not equally useful in comparing the words of different languages; which will thus appear. Different nations judge differently of the harshness or smoothness of articulate sounds; a sound, for example, harsh and disagreeable to an Italian, may be abundantly smooth to a northern ear: here every nation must judge for itself; nor can there be any solid ground for a preference, when there is no common standard to which we can appeal. The case is precisely the same as in behaviour and manners: plain-dealing and sincerity, liberty in words and actions, form the character of one people; politeness, reserve, and a total disguise of every sentiment that can give offence, form the character of another people; to each the manners of the other are disagreeable. An effeminate mind cannot bear the least of that roughness and severity, which is generally esteemed manly when exerted upon proper occasions: neither can an effeminate ear bear the harshness of certain words, that are deemed nervous and sounding by those accustomed to a rougher tone of speech. Must we then relinquish all thoughts of comparing languages in the point of roughness and smoothness, as a fruitless inquiry? Not altogether so; for we may proceed a certain length, though without hope of an ultimate decision: a language pronounced with difficulty even by natives, must yield to a smoother language: and supposing two languages pronounced with equal facility by natives, the rougher language, in my judgment, ought to be preferred, provided it be also stored with a competent share of more mellow sounds; which will be evident from attending to the different effects that articulate sound hath upon the mind. A smooth gliding
sect. i. beauty of language.

found is agreeable, by calming the mind, and lulling it to rest: a rough bold sound, on the contrary, animates the mind; the effort perceived in pronouncing, is communicated to the hearers, who feel in their own minds a similar effort, rousing their attention, and disposing them to action. i add another consideration: that the agreeableness of contrast in the rougher language, for which the great variety of sounds gives ample opportunity, nuff, even in an effeminate ear, prevail over the more uniform sounds of the smoother language*. this appears to me all that can be safely determined upon the present point. with respect to the other circumstances that constitute the beauty of words, the standard above mentioned is infallible when apply'd to foreign languages as well as to our own: for every man, whatever be his mother tongue, is equally capable to judge of the length or shortness of words, of the alternate opening and closing of the mouth in speaking, and of the relation that the sound bears to the sense: in these particulars, the judgment is susceptible of no prejudice from custom, at least of no invincible prejudice.

that the english tongue, originally harsh, is at present much softened by dropping in the pronunciation many redundant consonants, is undoubtedly true: that it is not capable of being further mellowed without suffering in its force and energy, will scarce be thought by any one who possesses an ear; and yet such in britain is the propensity for dispatch, that overlooking the majesty of words composed of many syllables aptly connected, the prevailing taste is to shorten words, even at the expense of making them disagreeable to the ear, and harsh in the pronunciation. but i have no occasion to insist upon this article, being prevented by an excellent writer, who possessed, if any man ever did, the true genius of the english tongue†. i cannot however forbear

* that the italian tongue is rather too smooth, seems probable from considering, that in versification words are frequently suppressed in order to produce a rougher and bolder tone.

† see swift's proposal for correcting the english tongue, in a letter to the earl of oxford.
bear urging one observation, borrowed from that author: several tenses of our verbs are formed by adding the final syllable ed, which, being a weak sound, has remarkably the worse effect by posseffing the most conspicuous place in the word; upon which account, the vowel in common speech is generally suppressed, and the consonant added to the foregoing syllable; and hence the following rugged sounds, drudg’d, disturb’d, rebuk’d, fledg’d. It is still less excusable to follow this practice in writing; for the hurry of speaking may excuse what would be altogether improper in a composition of any value: the syllable ed, it is true, makes but a poor figure at the end of a word; but we ought to submit to that defect, rather than multiply the number of harsh words, which, after all that has been done, bear an overproportion in our tongue. The author above-mentioned, by showing a good example, did all in his power to restore that syllable; and he well deserves to be imitated. Some exceptions however I would make: a word that signifies labour, or any thing harsh or rugged, ought not to be smooth; therefore force’d, with an apostrophe, is better than forced, without it: another exception is, where the penult syllable ends with a vowel; in that case the final syllable ed may be apostrophized without making the word harsh: examples, betray’d, carry’d, destroy’d, employ’d.

The article next in order, is the music of words as united in a period. And as the arrangement of words in succession so as to afford the greatest pleasure to the ear, depends on principles pretty remote from common view, it will be necessary to premise some general observations upon the appearance that a number of objects make when placed in an increasing or decreasing series; which appearance will be very different, accordingly as resemblance or contrail prevails. Where the objects vary by small differences so as to have a mutual resemblance, we in ascending conceive the second object of no greater size than the first, the third of no greater size than the second, and so of the rest; which diminisheth in appearance the size of the whole: but when, beginning at the largest object, we proceed gradually to the least, resemblance makes us imagine the second as large
as the first, and the third as large as the second; which in appearance magnifies every object of the series except the first. On the other hand, in a series varying by great differences, where contrast prevails, the effects are directly opposite: a large object succeeding a small one of the same kind, appears by the opposition larger than usual; and a small object, for the same reason, succeeding one that is large, appears less than usual. Hence a remarkable pleasure in viewing a series ascending by large differences; directly opposite to what we feel when the differences are small. The smallest object of a series ascending by large differences has the same effect upon the mind as if it stood single without making a part of the series: but the second object, by means of contrast, makes a much greater figure than when viewed singly and apart; and the same effect is perceived in ascending progressively, till we arrive at the last object. The opposite effect is produced in descending; for in this direction, every object, except the first, makes a less figure than when viewed separately and independent of the series. We may then lay down as a maxim, which will hold in the composition of language as well as of other subjects, That a strong impulse succeeding a weak, makes a double impression on the mind; and that a weak impulse succeeding a strong, makes scarce any impression.

After establishing this maxim, we can be at no loss about its application to the subject in hand. The following rule is laid down by Diomedes †. "In verbis obervandum est, ne a majoribus ad minora descendat oratio; melius enim dicitur, Vir est optimus, quam, "Vir optimus est." This rule is also applicable to entire members of a period, which, according to our author's expression, ought not, more than single words, to proceed from the greater to the less, but from the less to the greater ‡. In arranging the members of a period, no writer equals Cicero: the beauty of the following

*See the reason, chap. 8.
†De structura perfectæ orationis, i. 2.
‡See Demetrius Phalereus of Elocution, sect. 18.
ing examples out of many, will not suffer me to flour
them over by a reference.

Quicum quæstor fueram,
Quicum me fors consuetudoque majorum,
Quicum me deorum.hominumque judicium conjunx-
erat.

Again:
Habet honorem quem petimus,
Habet spem quam præpositam nobis habemus,
Habet exstillationem, multo sudore, labore, vigiliis-
que, collectam.

Again:
Eripite nos ex miseriis,
Eripite nos ex faucibus eorum,
Quorum crudelitas nostro sanguine non potest expleri.

De oratore, l. 1. §. 52.

This order of words or members gradually increasing in
length, may, so far as concerns the pleasure of sound
 singly, be denominated a climax in sound.

The last article is the music of periods as united in
a discourse; which shall be dispatched in a very few
words. By no other human means is it possible to pre-
sent to the mind, such a number of objects and in so
swift a succession, as by speaking or writing: and for
that reason, variety ought more to be studied in these,
than in any other sort of composition. Hence a rule
regarding the arrangement of the members of different
periods with relation to each other, That to avoid a te-
dious uniformity of sound and cadence, the arrange-
ment, the cadence, and the length of these members,
ought to be diversified as much as possible: and if the
members of different periods be sufficiently diversified,
the periods themselves will be equally so.

S: E C T: II.

Beauty of language with respect to signification.

It is well said by a noted writer *, "That by means
of speech we can divert our sorrows, mingle our
"mirth,

* Scot's Christian life.
mirth, impart our secrets, communicate our counsels, and make mutual compacts and agreements to supply and afflict each other.” Considering speech as contributing to so many good purposes, words that convey clear and distinct ideas, must be one of its capital beauties. This cause of beauty, is too extensive to be handled as a branch of any other subject; for to ascertain with accuracy even the proper meaning of words, not to talk of their figurative power, would require a large volume; an useful work indeed, but not to be attempted without a large stock of time, study, and reflection. This branch therefore of the subject I humbly decline. Nor do I propose to exhaust all the other beauties of language with respect to signification: the reader, in a work like the present, cannot fairly expect more than a slight sketch of those that make the greatest figure. This talk I attempt the more willingly, as being connected with certain principles in human nature; and the rules I shall have occasion to lay down, will, if I judge rightly, be agreeable illustrations of these principles. Every subject must be of importance that tends to unfold the human heart; for what other science is of greater use to human beings?

The present subject is too extensive to be discussed without dividing it into parts; and what follows suggests a division into two parts. In every period, two things are to be regarded: first, the words of which it is composed; next, the arrangement of these words; the former resembling the stones that compose a building, and the latter resembling the order in which they are placed. Hence the beauties of language with respect to its meaning, may not improperly be distinguished into two kinds: first, the beauties that arise from a right choice of words or materials for constructing the period; and next, the beauties that arise from a due arrangement of these words or materials. I begin with rules that direct us to a right choice of words, and then proceed to rules that concern their arrangement.

And with respect to the former, communication of thought being the principal end of language, it is a rule, That perspicuity ought not to be sacrificed to any other beauty whatever; if it should be doubted whether perspicuity
Beauty of Language. Ch. XVIII.

Confpicuity be a positive beauty, it cannot be doubted, that the want of it is the greatest defect. Nothing therefore in language ought more to be studied, than to prevent all obscurity in the expression; for to have no meaning, is but one degree worse than to have a meaning that is not understood. Want of perspicuity from a wrong arrangement, belongs to the next branch. I shall here give a few examples where the obscurity arises from a wrong choice of words; and as this defect is too common in the ordinary herd of writers to make examples from them necessary, I confine myself to the most celebrated authors.

Livy, speaking of a rout after a battle,

Multique in ruina majore quam fuga oppressi obturcataque.

This author is frequently obscure by expressing but part of his thought, leaving it to be completed by his reader. His description of the sea-fight, l. 28. cap. 30. is extremely perplexed.

Unde tibi reditum certo subtemine Parcae
Rupere. [Horace, epod. xiii. 22.

Qui perpepe cava testudine fleavit amorem,
Non elaboratum ad pedem. [Horace, epod. xiv. 11.

Me fabulosa Vulture in Appulo,
Altriciis extra limen Apuliae,
Ludo, fatigatumque somno,
Fronde nova puerum palumbes
Texere. [Horace, Carm. l. 3. ode 4.

Puræ rivus aqvæ, silvaque jugerum
Paucorum, et fegetis certa fides mæ,
Fulgentem imperio fertilis Africæ
Fallit fortæ beatior. [Horace, Carm. l. 3. ode 16.

Cum fas atque nefas exiguo fine libidinum
Discernunt avidi. [Horace, Carm. l. 1. ode 18.

Ac spem fronte ferenat. [Æneid. iv. 477.

I am in greater pain about the foregoing passages than about any I have ventured to criticise, being aware that a vague
a vague or obscure expression, is apt to gain favour with thole who neglect to examine it with a critical eye: to some it carries that sense which they relish the most; and by suggesting various meanings at once, it is admired by others as concise and comprehensive: which by the way fairly accounts for the opinion generally entertained with respect to most languages in their infant state, of their expressing much in few words. This observation cannot be better illustrated than by a passage from Quintilian, transcribed in the first volume for a different purpose, and which is in the following words.

At qua Polycleto defuerunt, Phidias atque Alcamen dantur. Phidias tamen diis quam hominibus efficiendis melior artifex traditur: in ebore vero, longe citra æmulum, vel si nihil nisi Minervam Athenis, aut Olympium in Elide Jovem fecisset, cujus pulchritudo adjecitse aliquid etiam receptæ-religioni videtur; adeo majestas operis Deum æquavit.

The sentence in the Italic characters appeared always to me extremely expressive, before I gave it peculiar attention. And yet if one examine it independent of the context, its proper meaning, is not what is intended: the words naturally import, that the beauty of the statues mentioned, appears to add some new tenet or rite to the established religion, or appears to add new dignity to it; and we must consult the context before we can gather the true meaning; which is, that the Greeks were confirmed in the belief of their established religion by these majestic statues, so like real divinities.

There is want of neatness even in an ambiguity so slight as what arises from the construction merely; as where the period commences with a member conceived to be in the nominative case, and which afterward is found to be in the accusative. Example: "Some e-

*motions more peculiarly connected with the fine arts,

*I propose to handle in separate chapters*. Better thus: "Some emotions more peculiarly connected with "the fine arts, are proposed to be handled in separate "chapters."

I add

* Elements of Criticism, vol. i. p. 43. edit. 1.
I add another error against perspicuity; which I mention the rather because with some writers it passes for a beauty. It is the giving different names to the same object, mentioned oftener than once in the same period. Example: Speaking of the English adventurers who first attempted the conquest of Ireland, "and instead of re-
claiming the natives from their uncultivated manners, "they were gradually assimilated to the antient inhabi-
tants, and degenerated from the customs of their own "nation." From this mode of expression, one would think the author meant to distinguish the antient inhabi-
tants from the natives; and we cannot discover other-
wise than from the sense, that these are only different names given to the same object for the sake of variety. But perspicuity ought never to be sacrificed to any other beauty, which leads me to think that the passage may be improved as follows: "and degenerating from the "customs of their own nation, they were gradually af-
similated to the natives, instead of reclaiming them "from their uncultivated manners."

The rule next in order, because next in importance, is, That the language ought to correspond to the sub-
ject: heroic actions or sentiments require elevated lan-
guage; tender sentiments ought to be expressed in words soft and flowing; and plain language, devoid of orna-
ment, is adapted to subjects grave and didactic. Lan-
guage may be considered as the dress of thought; and where the one is not suited to the other, we are sensible of incongruity, in the same manner as where a judge is dressed like a fop, or a peasant like a man of quality. Where the impression made by the words resembles the impression made by the thought, the similar emotions mix sweetly in the mind, and double the pleasure*; but where the impressions made by the thought and the words are dissimilar, the unnatural union they are forc'd into is disagreeable †.

This concordance between the thought and the words has been observed by every critic, and is so well under-
stood as not to require any illustration. But there is a concordance

* Chap. 2. part 4. † Ibid.
Se&. II. Beauty of Language.

concordance of a peculiar kind that has been scarcely touched in works of criticism, though it contributes greatly to neatness of composition. It is what follows.

In a thought of any extent, we seldom miss to find some parts intimately united, some slightly, some disjoined, and some directly opposed to each other. To find these conjunctions and disjunctions imitated in the expression, is a great beauty: because such imitation makes the words concordant with the sense. This doctrine may be illustrated by a familiar example: when we have occasion to mention the intimate connection that the soul hath with the body, the expression ought to be, the soul and body; because the particle the, relative to both, makes a connection in the expression, resembling in some degree the connection in the thought: but when the soul is distinguished from the body, it is better to say the soul, and the body; because the disjunction in the words resembles the disjunction in the thought. I proceed to other examples, beginning with conjunctions.

Constituit agmen; et expedire tela animosque, equitibus jusitis, &c. [Livy, l. 38. § 25.

Here the words that express the connected ideas are artificially connected by subjecting them both to the regimen of one verb. And the two following are of the same kind.

Quum ex paucis quotidiœ aliqui eorum caderent aut vulnerarentur, et qui superarent, seflis et corporibus et animis essent, &c. [Livy, l. 38. § 29.

Polt acer Mnæstheus adducto constitit arcu,
Alta petens, pariterque oculos telumque tetendit. Æneid, v. 507.

But to justify this artificial connection among the words, the ideas they express ought to be intimately connected; for otherwise that concordance which is required between the sense and the expression will be impaired. In that view a passage from Tacitus is exceptionable; where words that signify ideas very little connected, are however forc'd into an artificial union. Here is the passage:

Germania omnis a Gallis, Rhaetisque, et Pannoniis, Rheno
Beauty of Language. Ch. XVIII.

Rheno et Danubio fluminibus; a Sarmatis Dacifque, mutuo metu aut montibus separatur. De moribus Germanorum.

Upon the same account, I esteem the following passage equally exceptionable.

—The fiend look'd up, and knew
His mounted scale aloft; nor more, but fled
Murm'ring, and with him fled the shades of night.

Paradise Lost, b. 4. at the end.

There is no natural connection between a person's flying or retiring, and the succession of day-light to darkness; and therefore to connect artificially the terms that signify these things cannot have a sweet effect.

Two members of a thought connected by their relation to the same action, will naturally be expressed by two members governed by the same verb; in which case these members, in order to improve their connection, ought to be constructed in the same manner. This beauty is so common among good writers as to have been little attended to; but the neglect of it is remarkably disagreeable: For example, "He did not mention " Leonora, nor that her father was dead." Better thus: " He did not mention Leonora, nor her father's " death."

Where two ideas are so connected as to require but a copulative, it is pleasant to find a connection in the words that express these ideas, were it even so slight as where both begin with the same letter:

The peacock, in all his pride, does not display half the colour that appears in the garments of a British lady, when she is either dressed for a ball or a birth-day.

Spectator, N° 265.

Had not my dog of a steward run away as he did, without making up his accounts, I had still been immersed in tin and sea-coal.

Ibid. N° 530.

My life's companion, and my bosom friend,
One faith, one fame, one fate shall both attend.

Dryden, Translation of the Æneid.
There is obviously a sensible defect in neatness when uniformity in this case is totally neglected *; witness the following example, where the construction of two members connected by a copulative is unnecessarily varied.

For it is confidently reported, that two young gentlemen of real hopes, bright wit, and profound judgment, who upon a thorough examination of causes and effects, and by the mere force of natural abilities, without the least tincture of learning, have made a discovery that there was no God, and generously communicating their thoughts for the good of the public, were some time ago, by an unparalled severity, and upon I know not what obsolete law, broke for blasphemy †. [Better thus]:—having made a discovery that there was no God, and having generously communicated their thoughts for the good of the public, were some time ago, &c.

He had been guilty of a fault, for which his master would have put him to death, had he not found an opportunity to escape out of his hands, and fled into the deserts of Numidia. [Guardian, No 139.

If all the ends of the revolution are already obtained, it is not only impertinent to argue for obtaining any of them, but factious designs might be imputed, and the name of incendiary be applied with some colour, perhaps, to any one who should persist in pressing this point.

Dissertation upon parties, Dedication.

Next as to examples of disjunction and opposition in the parts of the thought, imitated in the expression; an imitation that is distinguished by the name of antithesis.

Speaking of Coriolanus soliciting the people to be made conful:

With a proud heart he wore his humble weeds.

Coriolanus,

Had you rather Cæsar were living, and die all slaves, than

* See Girard’s French Grammar, discourse 12.
† An argument against abolishing Christianity. Swift.
than that Caesar were dead, to live all free men?

Julius Caesar.

He hath cool'd my friends and heated mine enemies.

Shakespeare.

An artificial connection among the words, is undoubtedly a beauty when it represents any peculiar connection among the constituent parts of the thought; but where there is no such connection, it is a positive deformity, as above observed, because it makes a discordance between the thought and expression. For the same reason, we ought also to avoid every artificial opposition of words where there is none in the thought. This last, termed *verbal antithesis*, is studied by low writers, because of a certain degree of liveliness in it. They do not consider how incongruous it is, in a grave composition, to cheat the reader, and to make him expect a contrast in the thought, which upon examination is not found there.

*A light wife doth make a heavy husband.*

Merchant of Venice.

Here is a studied opposition in the words, not only without any opposition in the sense, but even where there is a very intimate connection, that of cause and effect; for it is the levity of the wife that torments the husband.

——— Will maintain

Upon his *bad* life to make all this *good*.

King Richard II. act 1. sc. 2.

Lucetta. What, shall these papers lie like tell-tales here?

Julia. If thou respect them, best to take them up.

Lucetta. Nay, I was taken up for laying them down.

Two Gentlemen of Verona, act 1. sc. 3.

A fault directly opposite to that last mentioned, is to conjoin artificially words that express ideas opposed to each other in the thought: This is a fault too gross to be in common practice; and yet writers are guilty of it in some degree, when they conjoin by a copulative things transacted at different periods of time. Hence a want of neatness in the following expression.

The
The nobility too, whom the King had no means of retaining by suitable offices and preferments, had been
seized with the general discontent, and unwarily threw
themselves into the scale which began already too much
to preponderate. [Hist. of G. Britain, vol. 1. p. 250.

In periods of this kind, it appears more neat to express
the past time by the participle passive, thus:

The nobility having been seized with the general dis-
content, unwarily threw themselves, &c. (or), The no-
bility, who had been seized, &c. unwarily threw them-
selves, &c.

It is unpleasant to find even a negative and affirm-
itive proposition connected by a copulative:

Nec excitatur classico miles truci,
Nec horret iratum mare;
Forumque vitat, et superbo civium
Potentiorum limina. [Horace, Epod 2. l. 5.

If it appear not plain, and prove untrue,
Deadly divorce step between me and you.

Shakespeare.

In mirth and drollery it may have a good effect to
connect verbally things that are opposite to each other
in the thought. Example: Henry the Fourth of France
introducing the Marechal Biron to some of his friends,
"Here, Gentlemen," says he, "is the Marechal Bi-
ron, whom I freely present both to my friends and
"enemies."

This rule of studying uniformity between the thought
and expression, may be extended to govern the construc-
tion of sentences or periods. A sentence or period
ought to express one entire thought or mental proposi-
tion; and different thoughts ought to be separated in
the expression by placing them in different sentences or
periods. It is therefore offending against neatness, to
crowd into one period entire thoughts requiring more
than one; which is joining in language things that are
separated in reality. Of errors against this rule take
the following examples.

Behold
Behold, thou art fair, my beloved, yea pleasant: also our bed is green.

Cæsar, describing the Suevi:

Atque in eam se consuetudinem adduxerunt, ut locis frigidissimis, neque vellitis, prater pelles, habéant quidquam, quarum propter exiguitatem magna est corporis pars aperta, et laventur in fluminibus.

Commentaria, l. 4. prin.

Burnet, in the history of his own times, giving Lord Sunderland's character, says,

His own notions were always good; but he was a man of great expence.

I have seen a woman's face break out in heats, as she has been talking against a great Lord, whom she had never seen in her life; and indeed never knew a party-woman that kept her beauty for a twelvemonth.

Speculator, No 57.

Lord Bolingbroke, speaking of Strada:

I single him out among the moderns, because he had the foolish presumption to censure Tacitus, and to write history himself; and your Lordship will forgive this short excursion in honour of a favourite writer.

Letters on history, vol. i. let. 5.

It seems to me, that in order to maintain the moral system of the world at a certain point, far below that of ideal perfection, (for we are made capable of conceiving what we are incapable of attaining), but however sufficient upon the whole to constitute a state easy and happy, or at the worst tolerable: I say, it seems to me, that the author of nature has thought fit to mingle from time to time, among the societies of men, a few, and but a few, of those on whom he is graciously pleased to bestow a larger proportion of the ethereal spirit than is given in the ordinary course of his providence to the sons of men.

Bolingbroke, on the spirit of patriotism, let. 1.

To crowd into a single member of a period different subjects, is still worse than to crowd them into one period.

--- Trojan,
From conjunctions and disjunctions in general, we proceed to comparisons, which make one species of them, beginning with similes. And here also, the intimate connection that words have with their meaning requires, that in describing two resembling objects a resemblance in the two members of the period ought to be studied. To illustrate the rule in this case, I shall give various examples of deviations from it; beginning with resemblances expressed in words that have no resemblance.

I have observed of late, the style of some great ministers very much to exceed that of any other productions.

Letter to the Lord High Treasurer. Swift.

This, instead of studying the resemblance of words in a period that expresses a comparison, is going out of one's road to avoid it. Instead of productions, which resemble not ministers great nor small, the proper word is writers or authors.

If men of eminence are exposed to censure on the one hand, they are as much liable to flattery on the other. If they receive reproaches which are not due to them, they likewise receive praises which they do not deserve.

Here the subject plainly demands uniformity in expression instead of variety; and therefore it is submitted, whether the period would not do better in the following manner:

If men of eminence be exposed to censure on the one hand, they are as much exposed to flattery on the other. If they receive reproaches that are not due, they likewise receive praises that are not due.

I cannot but fancy, however, that this imitation, which passes so currently with other judgments, must at some time or other have stuck a little with your Lordship.*

* Letter concerning enthusiasm. Shaftesbury.
Better thus: I cannot but fancy, however, that this imitation, which passes so currently with others, must at some time or other have stuck a little with your Lordship.

A glutton or mere sensualist is as ridiculous as the other two characters. [Shaftesbury, vol. 1. p. 129.

They wisely prefer the generous efforts of good will and affection, to the reluctant compliances of such as obey by force. [Remarks on the history of England, letter 5. Bolingbroke.

Titus Livius, mentioning the people of Enna demanding the keys from the Roman garrison, makes the governor say,

Quas simul tradiderimus, Carthaginienfium extemplo Enna erit, feciusque hic trucidabimus, quam Murgantiae præsidium interfectum est. [l. 24. § 38.

Quintus Curtius, speaking of Porus mounted on an elephant, and leading his army to battle:

Magnitudini Porti adjicere videbatur bellua qua vehebatur, tantum inter caeteras eminens, quanto aliis ipse præstabat. [l. 8. cap. 14.

It is a still greater deviation from congruity, to affect not only variety in the words, but also in the construction. Describing Thermopylae, Titus Livius says,

Id jugum, sicut Apennini doro Italia dividitur, ita median Græciam diremit. [l. 36. § 15.

Speaking of Shakespeare:

There may remain a suspicion that we over-rate the greatness of his genius, in the same manner as bodies appear more gigantic on account of their being disproportionate and misshapen.

This is studying variety in a period where the beauty lies in uniformity. Better thus:

There may remain a suspicion that we over-rate the greatness of his genius, in the same manner as we over-rate
rate the greatness of bodies that are disproportioned and misshapen.

Next as to the length of the members that signify the resembling objects. To produce a resemblance between such members, they ought not only to be constructed in the same manner, but as nearly as possible be equal in length. By neglecting this circumstance, the following example is defective in neatness.

As the performance of all other religious duties will not avail in the sight of God, without charity; nor will the discharge of all other ministerial duties avail in the sight of men, without a faithful discharge of this principal duty.

**Dissertation upon parties, dedication.**

In the following passage, all the errors are accumulated that a period expressing a resemblance can well admit.

Ministers are answerable for every thing done to the prejudice of the constitution, in the same proportion as the preservation of the constitution in its purity and vigour, or the perverting and weakening it, are of greater consequence to the nation, than any other instances of good or bad government.

**Dissertation upon parties, dedication.**

Next of a comparison where things are opposed to each other. And here it must be obvious, that if resemblance ought to be studied in the words which express two resembling objects, there is equal reason for studying opposition in the words which express contrasted objects. This rule will be best illustrated by examples of deviation from it:

A friend exaggerates a man's virtues, an enemy inflames his crimes. [Spectator, No 399.]

Here the opposition in the thought is neglected in the words, which at first view seem to import, that the friend and the enemy are employ'd in different matters, without any relation to each other, whether of resemblance or of opposition. And therefore the contrast or opposition will be better marked by expressing the thought as follows.

A friend
A friend exaggerates a man's virtues, an enemy his crimes.

The following are examples of the same kind.

The wise man is happy when he gains his own approbation; the fool when he recommends himself to the applause of those about him. [Spectator, No 73.

Better:

The wise man is happy when he gains his own approbation; the fool when he gains that of others.

Sicut in frugibus pecudibusque, non tantum semina ad servandum indolem valent, quantum terrae proprietas cælique, sub quo aluntur, mutat. [Livy, l. 38. § 17.

We proceed to a rule of a different kind. During the course of a period, the scene ought to be continued without variation: the changing from person to person, from subject to subject, or from person to subject, within the bounds of a single period, distracts the mind, and affords no time for a solid impression. I illustrate this rule by giving examples of deviations from it.

Honos alit artes, omnesque incenduntur ad studia gloriae; jacentque ea semper qua apud quosque improbabuntur. Cicero, Tuscul. quest. 1. 1.

Speaking of the distemper contracted by Alexander bathing in the river Cydnus, and of the cure offered by Philip the physician:

Inter hæc à Parmenione fidissimo purpuratorum, literas accipit, quibus ei denunciabat, ne salutem suam Philippo committeret. [Quintus Curtius, l. 3. cap. 6.

Hook, in his Roman history, speaking of Eumenes, who had been beat down to the ground with a stone, says,

After a short time he came to himself; and the next day, they put him on board his ship, which convey'd him first to Corinth, and thence to the island of Ægina.

I give another example of a period which is unpleasant, even by a very slight deviation from the rule:

That sort of instruction which is acquired by inculcating an important moral truth, &c.
This expression includes two persons, one acquiring, and one inculcating; and the scene is changed without necessity. To avoid this blemish, the thought may be expressed thus:

That sort of instruction which is afforded by inculcating, &c.

The bad effect of this change of person is remarkable in the following passage.

The Britons, daily harassed by cruel inroads from the Picts, were forced to call in the Saxons for their defence, who consequently reduced the greatest part of the island to their own power, drove the Britons into the most remote and mountainous parts, and the rest of the country, in customs, religion, and language, became wholly Saxons. [Letter to the Lord High Treasurer. Swift]

The following example is a change from subject to person.

This profition of praise is not only a deceit upon the gross of mankind, who take their notion of characters from the learned; but also the better sort must by this means lose some part at least of that desire of fame which is the incentive to generous actions, when they find it promiscuously bestowed on the meritorious and undeserving. [Guardian, No. 4]

Even so slight a change as to vary the construction in the same period, is unpleasant:

Annibal luce prima, Balearibus levique alia armatura praemissa, transfregasis flumen, ut quoque traduxerat, ita in acie locabat; Gallos Hispanosque equites prope ripam lavo in cornu adversus Romanum equitatum; dextrum cornu Numidis equitibus datum. [Tit. Liv. I. 22. § 46]

Speaking of Hannibal's elephants drove back by the enemy upon his own army:

En magis ruere in fuos bellux, tantoque majore stragem edere quam inter hostes ediderant, quanto acerius pavor conflatam agit, quam incidentis magistri imperio regitur. [Liv. I. 27. § 14]

This passage is also faulty in a different respect, that there is no resemblance between the members of the expression, though they import a simile.
The present head, which relates to the choice of materials, shall be closed with a rule concerning the use of copulatives. Longinus observes, that it animates a period to drop the copulatives; and he gives the following example from Xenophon.

Closing their shields together, they were push'd, they fought, they flew, they were slain.

* Treatise of the Sublime, cap. 16.*

The reason I take to be what follows. A continued sound, if not loud, tends to lay us asleep: an interrupted sound rouses and animates by its repeated impulses: thus feet composed of syllables, being pronounced with a sensible interval between each, make more lively impressions than can be made by a continued sound. A period of which the members are connected by copulatives, produceth an effect upon the mind approaching to that of a continued sound; and therefore the suppressing of copulatives must animate a description. It hath another good effect: the members of a period connected by proper copulatives, glide smoothly and gently along; and are a proof of sedateness and leisure in the speaker: on the other hand, one in the hurry of passion, neglecting copulatives and other particles, expresses the principal images only; and for that reason, hurry or quick action is best expressed without copulatives:

Veni, vidi, vici.

Ferte cibi flammas, date vela, impellite remos.  
*Æneid. iv. 593.*

Quis globus, O cives, caligine volvitur atra?  
Ferte cibi ferrum, date tela, scandite muros.  
Ho'tis adeft, eja.  
*Æneid. ix. 37.*

In this view Longinus *justly compares copulatives in a period to strict tying, which in a race obstructs the freedom of motion.*

It follows, that to multiply copulatives in the same period ought to be avoided: for if the laying aside copulatives give force and liveliness, a redundancy of them

* Treatise of the Sublime, cap. 16.*
them must render the period languid. I appeal to the following instance, though there are not more than two copulatives.

Upon looking over the letters of my female correspondents, I find several from women complaining of jealous husbands; and at the same time protesting their own innocence, and desiring my advice upon this occasion. [Spectator, No. 170.

I except the case where the words are intended to express the coldness of the speaker; for there the redundancy of copulatives is a beauty:

Dining one day at an alderman's in the city, Peter observed him expatiating after the manner of his brethren, in the praises of his sirloin of beef. "Beef," said the sage magistrate, "is the king of meat: Beef comprehends in it the quintessence of partridge, and quail, and venison, and pheasant, and plum-pudding, and custard." [Tale of a Tub, § 4.

And the author shews great delicacy of taste in varying the expression in the mouth of Peter, who is represented more animated:

"Bread," says he, "dear brothers, is the staff of life, in which bread is contained, inclusive, the quintessence of beef, mutton, veal, venison, partridge, plum-pudding, and custard."

Another case must also be excepted: copulatives have a good effect where the intention is to give an impression of a great multitude consisting of many divisions; for example: "The army was composed of Grecians, and Carians, and Lycians, and Pamphylians, and Phrygians." The reason is, that a leisurely survey, which is expressed by the copulatives, makes the parts appear more numerous than they would do by a hasty survey: in the latter case the army appears in one groupe; in the former, we take as it were an accurate survey of each nation, and of each division*.

We proceed to the second kind of beauty; which consists in a due arrangement of the words or materials.

B 2

This

* See Demetrius Phalereus of Elocution, sect. 63.
This branch of the subject is not less nice than extensive; and I despair to put it in a clear light, except to those who are well acquainted with the general principles that govern the structure or composition of language.

In a thought, generally speaking, there is at least one capital object considered as acting or as suffering. This object is expressed by a substantive noun: its action is expressed by an active verb; and the thing affected by the action is expressed by another substantive noun: its suffering or passive state is expressed by a passive verb; and the thing that acts upon it, by a substantive noun. Besides these, which are the capital parts of a sentence or period, there are generally under parts: each of the substantives as well as the verb, may be qualified: time, place, purpose, motive, means, instrument, and a thousand other circumstances, may be necessary to complete the thought. And in what manner these several parts are connected in the expression, will appear from what follows.

In a complete thought or mental proposition, all the members and parts are mutually related, some slightly, some more intimately. To put such a thought in words, it is not sufficient that the component ideas be clearly expressed: it is also necessary, that all the relations contained in the thought be expressed according to their different degrees of intimacy. To annex a certain meaning to a certain sound or word, requires no art: the great nicety in all languages is, to express the various relations that connect together the parts of the thought. Could we suppose this branch of language to be still a secret, it would puzzle, I am apt to think, the acutest grammarian, to invent an expeditious method: and yet, by the guidance merely of nature, the rude and illiterate have been led to a method so perfect, as to appear not susceptible of any improvement; and the next step in our progress shall be to explain that method.

Words that import a relation, must be distinguished from those that do not. Substantives commonly imply no relation, such as animal, man, tree, river. Adjectives, verbs, and adverbs, imply a relation: the adjective good must relate to some being possessed of that quality: the verb write must be applied to some person who writes;
writes; and the adverbs moderately, diligently, have plainly a reference to some action which they modify. When a relative word is introduced, it must be signified by the expression to what word it relates, without which the sentence cannot be complete. For answering that purpose, I observe in Greek and Latin two different methods: adjectives are declined as well as substantives; and declension serves to ascertain the connection that is between them: if the word that expresses the subject be, for example, in the nominative case, so also must the word be that expresses its quality; example, vir bonus: again, verbs are related, on the one hand, to the agent, and, on the other, to the subject upon which the action is exerted; and a contrivance similar to that now mentioned, serves to express that double relation; the nominative case is appropriated to the agent, the accusative to the passive subject; and the verb is put in the first, second, or third person, to intimate its connection with the word that signifies the agent: examples, Ego amavit Tulliam; tu amas Semproniam; Brutus amavit Portiam. The other method is by juxtaposition, which is necessary with respect to such words only as are not declined, adverbs, for example, articles, prepositions, and conjunctions. In the English language there are few declensions; and therefore juxtaposition is our chief resource: adjectives accompany their substantives*; an adverb accompanies the word it qualifies; and the verb occupies the middle place between the active and passive subjects to which it relates.

It must be obvious, that those terms which have nothing relative in their signification, cannot be connected in so easy a manner. When two substantives happen to be

* Taking advantage of a declension to separate an adjective from its substantive, as is commonly practised in Latin, though it detract not from perspicuity, is certainly less neat than the English method of juxtaposition. Contiguity is more expressive of an intimate relation, than resemblance merely of the final syllables. Latin indeed has evidently the advantage when the adjective and substantive happen to be connected by contiguity, as well as by resemblance of the final syllables.
be connected, as cause and effect, as principal and accessory, or in any other manner, such connection cannot be expressed by contiguity solely; for words must often in a period be placed together which are not thus related: the relation between substantives, therefore, cannot otherwise be expressed but by particles denoting the relation. Latin indeed and Greek, by their declensions, go a certain length to express such relations, without the aid of particles: the relation of property, for example, between Cæsar and his horse, is expressed by putting the latter in the nominative case, the former in the genitive; *equus Cæsaris*: the same is also expressed in English without the aid of a particle, *Cæsar’s horse*. But in other instances, declensions not being used in the English language, relations of this kind are commonly expressed by prepositions. Examples: That wine came from Cyprus. He is going to Paris. The sun is below the horizon.

This form of connecting by prepositions, is not confined to substantives. Qualities, attributes, manner of existing or acting, and all other circumstances, may in the same manner be connected with the substantives to which they relate. This is done artificially by converting the circumstance into a substantive, in which condition it is qualified to be connected with the principal subject by a preposition, in the manner above described: for example, the adjective *wise* being converted into the substantive *wisdom*, gives opportunity for the expression “a man of wisdom,” instead of the more simple expression, *a wise man*: this variety in the expression, enriches language. I observe, beside, that the using a preposition in this case, is not always a matter of choice: it is indispensible with respect to every circumstance that cannot be expressed by a single adjective or adverb.

To pave the way for the rules of arrangement, one other preliminary is necessary; which is, to explain the difference between a natural style, and that where transposition or inversion prevails. There are, it is true, no precise boundaries between them, for they run into each other like the shades of different colours: no person however is at a loss to distinguish them in their extremes: and
and it is necessary to make the distinction; because though some of the rules I shall have occasion to mention are common to both, yet each hath rules peculiar to itself. In a natural style, relative words are by juxtaposition connected with those to which they relate, going before or after, according to the peculiar genius of the language. Again, a circumstance connected by a preposition, follows naturally the word with which it is connected. But this arrangement may be varied, when a different order is more beautiful: a circumstance may be placed before the word with which it is connected by a preposition; and may be interjected even between a relative word and that to which it relates. When such liberties are frequently taken, the style becomes inverted or transposed.

But as the liberty of inversion is a capital point in handling the present subject, it will be necessary to examine it more narrowly, and in particular to trace the several degrees in which an inverted style recedes more and more from that which is natural. And first, as to the placing a circumstance before the word with which it is connected, I observe, that it is the easiest of all inversion, even so easy as to be consistent with a style that is properly termed natural: witness the following examples.

In the sincerity of my heart, I profess, &c.

By our own ill management, we are brought to so low an ebb of wealth and credit, that, &c.

On Thursday morning there was little or nothing transfixed in Change-alley.

At St Bride's church in Fleet-street, Mr Woolston, (who writ against the miracles of our Saviour), in the utmost terrors of conscience, made a public recantation.

The interjecting a circumstance between a relative word and that to which it relates, is more properly termed inversion; because, by a disjunction of words intimately connected, it recedes farther from a natural style. But this licence has also degrees; for the disjunction is more violent in some cases than in others. And to give a just notion of the difference, there is a necessity
necessity to enter a little more into an abstract subject, than would otherwise be my inclination.

In nature, though a subject cannot exist without its qualities, nor a quality without a subject; yet in our conception of these, a material difference may be remarked. I cannot conceive a quality but as belonging to some subject: it makes indeed a part of the idea which is formed of the subject. But the opposite holds not; for though I cannot form a conception of a subject devoid of all qualities, a partial conception may however be formed of it, laying aside or abstracting from any particular quality: I can, for example, form the idea of a fine Arabian horse without regard to his colour, or of a white horse without regard to his size. Such partial conception of a subject, is still more easy with respect to action or motion; which is an occasional attribute only, and has not the same permanency with colour or figure: I cannot form an idea of motion independent of a body; but there is nothing more easy than to form an idea of a body at rest. Hence it appears, that the degree of inversion depends greatly on the order in which the related words are placed: when a substantive occupies the first place, the idea it suggests must subsist in the mind at least for a moment, independent of the relative words afterward introduced; and that moment may without difficulty be prolonged by interjecting a circumstance between the substantive and its connections. This liberty therefore, however frequent, will scarce alone be sufficient to denominate a style inverted. The case is very different, where the word that occupies the first place denotes a quality or an action; for as these cannot be conceived without a subject, they cannot without greater violence be separated from the subject that follows; and for that reason, every such separation by means of an interjected circumstance belongs to an inverted style.

To illustrate this doctrine examples are necessary, and I shall begin with those where the word first introduced does not imply a relation:

--- Nor Eve to iterate
Her former trespass's fear'd.

--- Hunger and thirst at once,
Powerful persuaders, quicken'd at the scent
Of that alluring fruit, urg'd me so keen.

Moon that now meet'st the orient sun, now flit
With the fix'd stars, fix'd in their orb that flies,
And ye five other wand'ring stars that move
In mystic dance not without song, resound.

His praise.

In the following examples, where the word first introduced imports a relation, the disjunction will be found more violent.

Of man's first disobedience, and the fruit
Of that forbidden tree, whose mortal taste
Brought death into the world, and all our woe,
With loss of Eden, till one greater man
Reirole us; and regain the blissful seat,
Sing heav'nly muse.

--- Upon the firm opacus globe
Of this round world, whose first convex divides
The luminous inferior orbs, inclos'd
From chaos and the th'road of darkness old,
Satan alighted walks.

--- On a sudden open fly,
With impetuous recoil and jarring sound,
Th'infernal doors.

--- Wherein remain'd,
For what could else? to our almighty foe
Clear victory, to our part loss and rout.

--- Forth rush'd, with whirlwind sound,
The chariot of paternal Deity.

Language would have no great power, were it confined to the natural order of ideas: I shall soon have opportunity to make it evident, that by inversion, a thousand beauties may be compassed, which must be relinquished in a natural arrangement. In the mean time, it ought not to escape observation, that the mind of man is happily so constituted as to relish inversion, though in one respect unnatural; and to relish it so much, as in many cases to admit even such words to be separated as are the most intimately connected. It can scarce be said that inversion has any limits; though I may venture
to pronounce, that the disjunction of articles, conjunctions, or prepositions, from the words to which they belong, has very seldom a good effect: the following example with relation to a preposition, is perhaps as tolerable as any of the kind.

He would neither separate from, nor act against them.

I give notice to the reader, that I am now ready to enter upon the rules of arrangement; beginning with a natural style, and proceeding gradually to what is the most inverted. And in the arrangement of a period, as well as in a right choice of words, the first and great object being perspicuity, the rule above laid down, that perspicuity ought not to be sacrificed to any other beauty, holds equally in both. Ambiguities occasioned by a wrong arrangement are of two sorts; one where the arrangement leads to a wrong sense, and one where the sense is left doubtful. The first, being the more culpable, shall take the lead, beginning with examples of words put in a wrong place.

How much the imagination of such a presence must exalt a genius, we may observe merefly from the influence which an ordinary presence has over men.

This arrangement leads to a wrong sense: the adverb merely seems by its position to affect the preceding word; whereas it is intended to affect the following words, an ordinary presence; and therefore the arrangement ought to be thus:

How much the imagination of such a presence must exalt a genius, we may observe from the influence which an ordinary presence merely has over men. [Or better], —which even an ordinary presence has over men.

The time of the election of a poet-laureat being now at hand, it may be proper to give some account of the rites and ceremonies antiently used at that solemnity, and only discontinued through the neglect and degeneracy of later times.

[Guardian.]

The term only is intended to qualify the noun degeneracy, and not the participle discontinued; and therefore the arrangement ought to be as follows:

_______ and
and discontinued through the neglect and degeneracy only, of later times.

Sixtus the Fourth was, if I mistake not, a great collector of books at least.

The expression here leads evidently to a wrong sense: the adverb at least, ought not to be connected with the substantive books, but with collector, thus:

Sixtus the Fourth was a great collector at least, of books.

Speaking of Lewis XIV.

If he was not the greatest king, he was the best actor of majesty at least, that ever filled a throne.

Ibid. letter 7.

Better thus:

If he was not the greatest king, he was at least the best actor of majesty, &c.

This arrangement removes the wrong sense occasioned by the juxtaposition of majesty and at least.

The following examples are of a wrong arrangement of members.

I have confined myself to those methods for the advancement of piety, which are in the power of a prince limited like ours by a strict execution of the laws.

A Project for the Advancement of Religion. Swift.

The structure of this period leads to a meaning which is not the author's, viz. power limited by a strict execution of the laws. That wrong sense is removed by the following arrangement:

I have confined myself to those methods for the advancement of piety, which, by a strict execution of the laws, are in the power of a prince limited like ours.

This morning, when one of Lady Lizard's daughters was looking over some hoods and ribbons brought by her tirewoman, with great care and diligence, I employed no less in examining the box which contained them.

Guardian, No 4.
The wrong sense occasioned by this arrangement, may be easily prevented by varying it thus:

This morning when, with great care and diligence, one of Lady Lizard's daughters was looking over some hoods and ribands, &c.

A great stone that I happened to find after a long search by the sea-shore, served me for an anchor.

Gulliver's Travels, part i. chap. 8.

One would think that the search was confined to the sea-shore; but as the meaning is, that the great stone was found by the sea-shore, the period ought to be arranged thus:

A great stone, that, after a long search, I happened to find by the sea-shore, served me for an anchor.

Next of a wrong arrangement where the sense is left doubtful; beginning, as in the former sort, with examples of wrong arrangement of words in a member:

These forms of conversation by degrees multiplied and grew troublesome. [Spectator, No 119.

Here it is left doubtful whether the modification by degrees relate to the preceding member or to what follows: it should be,

These forms of conversation multiplied by degrees.

Nor does this false modesty expose us only to such actions as are indiscreet, but very often to such as are highly criminal. [Spectator, No 458.

The ambiguity is removed by the following arrangement:

Nor does this false modesty expose us to such actions only as are indiscreet, &c.

The empire of Blefuscu is an island situated to the north east side of Lilliput, from whence it is parted only by a channel of 800 yards wide.

Gulliver's Travels, part i. chap. 5.

The ambiguity may be removed thus:

——— from whence it is parted by a channel of 800 yards wide only.
In the following examples the sense is left doubtful by wrong arrangement of members.

The minister who grows less by his elevation, like a little statue placed on a mighty pedestal, will always have his jealousy strong about him.

*Disertion upon parties, dedication. Bolingbroke.*

Here, so far as can be gathered from the arrangement, it is doubtful, whether the object introduced by way of simile, relate to what goes before or to what follows: the ambiguity is removed by the following arrangement:

The minister who, like a little statue placed on a mighty pedestal, grows less by his elevation, will always, &c.

Since this is too much to ask of freemen, nay of slaves, if his expectation be not answered, shall he form a lasting division upon such transient motives? *ibid.*

Better thus:

Since this is too much to ask of freemen, nay of slaves, shall he, if his expectations be not answered, form, &c.

Speaking of the superstitious practice of locking up the room where a person of distinction dies:

The knight, seeing his habitation reduced to so small a compass, and himself in a manner shut out of his own house, upon the death of his mother, ordered all the apartments to be flung open, and exorcised by his chaplain. *[Spectator, No 110]*

Better thus:

The knight seeing his habitation reduced to so small a compass, and himself in a manner shut out of his own house, ordered, upon the death of his mother, all the apartments to be flung open.

Speaking of some indecencies in conversation:

As it is impossible for such an irrational way of conversation to last long among a people that make any profession of religion, or show of modesty, if the country gentlemen get into it, they will certainly be left in the lurch. *[Spectator, No 119]*

The ambiguity vanishes in the following arrangement:
the country gentlemen, if they get into it, will certainly be left in the lurch.

Speaking of a discovery in natural philosophy, that colour is not a quality of matter:

As this is a truth which has been proved incontrovertibly by many modern philosophers, and is indeed one of the finest speculations in that science, if the English reader would see the notion explained at large, he may find it in the eighth chapter of the second book of Mr Lock's essay on human understanding. [SpecJator, No 413.

Better thus:

As this is a truth, &c. the English reader, if he would see the notion explained at large, may find it, &c.

A woman seldom asks advice before she has bought her wedding-cloaths. When she has made her own choice, for form's sake she sends a conge d'elire to her friends. [Ibid. No 475.

Better thus:

she sends, for form's sake, a conge d'elire to her friends.

And since it is necessary that there should be a perpetual intercourse of buying and selling, and dealing upon credit, where fraud is permitted or connived at, or hath no law to punish it, the honest dealer is always undone, and the knave gets the advantage.

Gulliver's Travels, part 1. chap. 6.

Better thus:

And since it is necessary that there should be a perpetual intercourse of buying and selling, and dealing upon credit, the honest dealer, where fraud is permitted or connived at, or hath no law to punish it, is always undone, and the knave gets the advantage.

From these examples, the following observation will occur, that a circumstance ought never to be placed between two capital members of a period; for by such situation it must always be doubtful, so far as we gather from the arrangement, to which of the two members it belongs: where it is interjected, as it ought to be, between parts of the member to which it belongs, the ambiguity
ambiguity is removed, and the capital members are kept distinct, which is a great beauty in composition. In general, to preserve members distinct that signify things distinguished in the thought, the best method is, to place first in the consequent member, some word that cannot connect with what precedes it.

If by any one it shall be thought, that the objections here are too scrupulous, and that the defect of perspicuity is easily supplied by accurate punctuation; the answer is, That punctuation may remove an ambiguity, but will never produce that peculiar beauty which is perceived when the sense comes out clearly and distinctly by means of a happy arrangement. Such influence has this beauty, that by a natural transition of perception, it is communicated to the very sound of the words, so as in appearance to improve the music of the period. But as this curious subject comes in more properly afterward, it is sufficient at present to appeal to experience, that a period so arranged as to bring out the sense clear, seems always more musical than where the sense is left in any degree doubtful.

A rule deservedly occupying the second place, is, That words expressing things connected in the thought, ought to be placed as near together as possible. This rule is derived immediately from human nature, in which there is discovered a remarkable propensity to place together things that are in any manner connected*: where things are arranged according to their connections, we have a sense of order; otherwise we have a sense of disorder, as of things placed by chance: and we naturally place words in the same order in which we would place the things they signify. The bad effect of a violent separation of words or members thus intimately connected, will appear from the following examples.

For the English are naturally fanciful, and very often disposed, by that gloominess and melancholy of temper which is so frequent in our nation, to many wild notions and visions, to which others are not so liable.

* See chap. 1.
Beauty of Language. Ch. XVII.

stance, violently separated from the subject to which it refers: this makes a harsh arrangement; the less excusable that the fault is easily prevented by placing the circumstance before the verb or assertion, after the following manner:

For the English are naturally fanciful, and, by that gloominess and melancholy of temper which is so frequent in our nation, are often disposed to many wild notions, &c.

For as no mortal author, in the ordinary fate and vicissitude of things, knows to what use his works may, some time or other, be apply’d, &c. [Speculator, No. 83.

Better thus:

For as, in the ordinary fate and vicissitude of things, no mortal author knows to what use, some time or other, his works may be apply’d, &c.

From whence we may date likewise the rivalry of the house of France, for we may reckon that of the Valois and that of Bourbon as one upon this occasion, and the house of Austria, that continues at this day, and has oft cost so much blood and so much treasure in the course of it.

It cannot be impertinent or ridiculous therefore in such a country, whatever it might be in the Abbot of St. Real’s, which was Savoy I think; or in Peru, under the Incas, where Garcilasso de la Vega says it was lawful for none but the nobility to study for men of all degrees to instruct themselves, in those affairs wherein they may be actors, or judges of those that act, or controllers of those that judge.

If Scipio, who was naturally given to women, for which anecdote we have, if I mistake not, the authority of Polybius, as well as some verses of Nevius preserved by Aulus Gellius, had been educated by Olympias at the court of Philip, it is improbable that he would have restored the beautiful Spaniard. [Ibid. let. 3.

If any one have a curiosity for more specimens of this kind, they will be found without number in the works of the same author.

A pro-
A pronoun, which saves the naming a person or thing a second time, ought to be placed as near as possible to the name of that person or thing. This is a branch of the foregoing rule; and with the reason there given, another concurs, viz. That if other ideas intervene, it is difficult to recollect the person or thing by reference:

If I had leave to print the Latin letters transmitted to me from foreign parts, they would fill a volume, and be a full defence against all that Mr Partridge, or his accomplices of the Portugal inquisition, will be ever able to object; who, by the way, are the only enemies my predictions have ever met with at home or abroad.

Better thus:

and be a full defence against all that can be objected by Mr Partridge, or his accomplices of the Portugal inquisition; who, by the way, are, &c.

There being a round million of creatures in human figure, throughout this kingdom, whose whole subsistence, &c. [A modest proposal, &c. Swift.

Better,

There being, throughout this kingdom, a round million of creatures in human figure, whose whole subsistence, &c.

Tom is a lively impudent clown, and has wit enough to have made him a pleasant companion, had it been polised and rectified by good manners.

Guardian, No 162.

It is the custom of the Mahometans, if they see any printed or written paper upon the ground, to take it up, and lay it aside carefully, as not knowing but it may contain some piece of their Alcoran. [spectator, No 85. The arrangement here leads to a wrong sense, as if the ground were taken up, not the paper.

Better thus:

It is the custom of the Mahometans, if they see upon the ground any printed or written paper, to take it up, &c.

The following rule depends on the communication of
of emotions to related objects; a principle in human nature that hath an extensive operation: and we find this operation, even where the objects are not otherwise related than by juxtaposition of the words that express them. Hence, to elevate or depress an object, one method is, to join it in the expression with another that is naturally high or low: witness the following speech of Eumenes to the Roman senate.

Causam veniendi fibi Romam suisse, preter cupiditatem visendi des hominesque, quorum beneficio in ea fortuna esset, supra quam ne optare quidem auderet, etiam ut coram moneret senatum ut Persei conatus obviam iret. 

_Livy, l. 42. cap. 11._

To join the Romans with the gods in the same enumeration, is an artful stroke of flattery, because it tacitly puts them on a level. On the other hand, when the purpose is to degrade or vilify an object, this is done successfully by ranking it with one that is really low:

I hope to have this entertainment in a readiness for the next winter; and doubt not but it will please more than the opera or puppet show. [Spectator, No 28.]

Manifold, have been the judgments which Heaven from time to time, for the chastisement of a sinful people, has inflicted upon whole nations. For when the degeneracy becomes common, 'tis but just the punishment should be general. Of this kind, in our own unfortunate country, was that destructive pestilence, whose mortality was so fatal as to sweep away, if Sir William Petty may be believed, five millions of Christian souls, besides women and Jews.

God's revenge against punning. Arbuthnot.

Such also was that dreadful conflagration ensuing in this famous metropolis of London, which consumed, according to the computation of Sir Samuel Moreland, 100,000 houses, not to mention churches and stables. _Ibid._

But on condition it might pass into a law, I would gladly exempt both lawyers of all ages, subaltern and field officers, young heirs, dancing-masters, pickpockets, and players.

_An infallible scheme to pay the public debts._ Swift.
Sooner let earth, air, sea, to chaos fall,
Men, monkeys, lap-dogs, parrots, perish all.

*Circumstances in a period resemble small stones in a building, employ'd to fill up vacuities among those of a larger size. In the arrangement of a period, such under-parts crowded together make a poor figure; and never are graceful but when interspersed among the capital parts. I illustrate this rule by the following examples.*

It is likewise urged, that there are, by computation, in this kingdom, above 10,000 parsons, whose revenues, added to those of my Lords the bishops, would suffice to maintain, &c.

*Argument against abolishing Christianity. Swift.*

Here two circumstances, viz. by computation and in this kingdom, are crowded together unnecessarily; they make a better appearance separated in the following manner:

It is likewise urged, that in this kingdom there are, by computation, above 10,000 parsons, &c.

If there be room for a choice, the sooner a circumstance is introduced, the better; because circumstances are proper for that coolness of mind, with which we begin a period as well as a volume: in the progress, the mind warms, and has a greater relish for matters of importance. When a circumstance is placed at the beginning of the period, or near the beginning, the transition from it to the principal subject is agreeable: it is like ascending, or mounting upward. On the other hand, to place it late in the period has a bad effect; for after being engaged in the principal subject, one is with reluctance brought down to give attention to a circumstance. Hence evidently the preference of the following arrangement,

Whether in any country a choice altogether unexceptionable has been made, seems doubtful.

before this other,

Whether a choice altogether unexceptionable has in any country been made, &c.
For this reason the following period is exceptionable in point of arrangement.

I have considered formerly, with a good deal of attention, the subject upon which you command me to communicate my thoughts to you.

Bolingbroke of the Study of History, letter 1.

which, with a slight alteration, may be improved thus:

I have formerly, with a good deal of attention, considered the subject, &c.

Swift, speaking of a virtuous and learned education:

And although they may be, and too often are drawn, by the temptations of youth, and the opportunities of a large fortune, into some irregularities, when they come forward into the great world; it is ever with reluctance and compunction of mind, because their bias to virtue still continues. [The Intelligencer, No. 9.

Better,

And although, when they come forward into the great world, they may be, and too often, &c.

The bad effect of placing a circumstance last or late in a period, will appear from the following examples.

Let us endeavour to establish to ourselves an interest in him who holds the reins of the whole creation in his hand. [Spectator, No. 12.

Better thus:

Let us endeavour to establish to ourselves an interest in him, who, in his hand, holds the reins of the whole creation.

Virgil, who has cast the whole system of Platonic philosophy, so far as it relates to the soul of man, into beautiful allegories, in the sixth book of his Æneid, gives us the punishment, &c. [Spectator, No. 90.

Better thus:

Virgil, who, in the sixth book of his Æneid, has cast, &c.

And Philip the Fourth was obliged at last to conclude a peace, on terms repugnant to his inclination, to that of
of his people, to the interest of Spain, and to that of all Europe, in the Pyrenean treaty.

Better thus:

And at last, in the Pyrenean treaty, Philip the Fourth was obliged to conclude a peace, &c.

In arranging a period, it is of importance to determine in what part of it a word makes the greatest figure, whether at the beginning, during the course, or at the close. The breaking silence routs the attention, and prepares for a deep impression at the beginning: the beginning, however, must yield to the close; which being succeeded by a pause, affords time for a word to make its deepest impression *. Hence the following rule, That to give the utmost force to a period, it ought if possible to be closed with that word which makes the greatest figure. The opportunity of a pause should not be thrown away upon accessories, but reserved for the principal object, in order that it may make a full impression: which is an additional reason against closing a period with a circumstance. There are however periods that admit not this structure; and in that case, the capital word ought, if possible, to be placed in the front, which next to the close is the most advantageous for making an impression. Hence, in directing our discourse to a man of figure, we ought to begin with his name; and one will be sensible of a degradation, when this rule is neglected, as it frequently is for the sake of verse. I give the following examples.

Integer vitae, seelerifque purus,
Non eget Mauri jaculis, neque arcu,
Nec venenatis gravidâ sagittis,
Fusce, pharetâ. [Horat. Carm. l. 1. ode 22.

Je crains Dieu, cher Ahzer, et n'ai point d'autre crainte.

* To give force or elevation to a period, it ought to begin and end with a long syllable. For a long syllable makes naturally the strongest impression; and of all the syllables in a period, we are chiefly moved with the first and last. [Demetrius Phalarceus of Elocution, sect. 39.
In these examples, the name of the person addressed to, makes a mean figure, being like a circumstance slip't into a corner. That this criticism is well founded, we need no other proof than Addison's translation of the last example:

O Abner! I fear my God, and I fear none but him.

Guardian, No. 117.

O father, what intends thy hand, she cry'd,
Against thy only son? What fury, O son,
Poisfesses thee to bend that mortal dart
Against thy father's head?

Paradise lost, book 2. l 727.

Every one must be sensible of a dignity in the invocation at the beginning, which is not attained by that in the middle. I mean not however to censure this passage: on the contrary, it appears beautiful, by distinguishing the respect that is due to a father from that which is due to a son.

The substance of what is said in this and the foregoing section, upon the method of arranging words in a period, so as to make the deepest impression with respect to sound as well as signification, is comprehended in the following observation. That order of words in a period will always be the most agreeable, where, without obscuring the sense, the most important images, the most sonorous words, and the longest members, bring up the rear.

The substance of what is said in this and the foregoing section, upon the method of arranging words in a period, so as to make the deepest impression with respect to sound as well as signification, is comprehended in the following observation. That order of words in a period will always be the most agreeable, where, without obscuring the sense, the most important images, the most sonorous words, and the longest members, bring up the rear.

Hitherto of arranging single words, single members, and single circumstances. But the enumeration of many particulars in the same period is often necessary; and the question is, In what order they should be placed. It does not seem easy, at first view, to bring a subject apparently too loose under any general rule: but luckily, reflecting upon what is said in the first chapter about order, we find rules laid down to our hand, which leave us no task but that of applying them to the present question. And, first, with respect to the enumerating a number of particulars of equal rank, it is laid down in the place quoted, that as there is no cause for preferring any one before the rest, it is indifferent to the mind in what order they be viewed. And it is only necessa-
 Sect. II. Beauty of Language.

ry to be added here, that for the same reason, it is indifferent in what order they be named. 2dly, If a number of objects of the same kind, differing only in size, are to be ranged along a straight line, the most agreeable order to the eye is that of an increasing series: in surveying a number of such objects, beginning at the left, and proceeding to greater and greater, the mind swells gradually with the successive objects, and in its progress has a very sensible pleasure. Precisely for the same reason, the words expressive of such objects ought to be placed in the same order. The beauty of this figure, which may be termed a climax in sense, has escaped Lord Bolingbroke in the first member of the following period:

Let but one great, brave, disinterested, active man arise, and he will be received, followed, and almost adored.

The following arrangement has sensibly a better effect:

Let but one brave, great, active, disinterested man arise, &c.

Whether the same rule ought to be followed in enumerating men of different ranks, seems doubtful: on the one hand, a number of persons presented to the eye in form of an increasing series, is undoubtedly the most agreeable order; on the other hand, in every list of names, we set the person of the greatest dignity at the top, and descend gradually through his inferiors. Where the purpose is to honour the persons named according to their rank, the latter order ought to be followed; but every one who regards himself only, or his reader, will choose the former order. 3dly, As the sense of order directs the eye to descend from the principal to its greatest accessory, and from the whole to its greatest part, and in the same order through all the parts and accessories till we arrive at the minutest; the same order ought to be followed in the enumeration of such particulars. I shall give one familiar example. Talking of the parts of a column, viz. the base, the shaft, the capital, these are capable of six different arrangements, and the question is, Which is the best? When we have in view the erection of a column, we are naturally
naturally led to express the parts in the order above mentioned; which at the same time is agreeable by mounting upward. But considering the column as it stands, without reference to its erection, the sense of order, as observed above, requires the chief part to be named first: for that reason we begin with the shaft; and the base comes next in order, that we may ascend from it to the capital. Lastly, in tracing the particulars of any natural operation, order requires that we follow the course of nature: historical facts are related in the order of time: we begin at the founder of a family, and proceed from him to his descendents: but in describing a lofty oak, we begin with the trunk, and ascend to the branches.

When force and liveliness of expression are demanded, the rule is, to suspend the thought as long as possible, and to bring it out full and entire at the close: which cannot be done but by inverting the natural arrangement. By introducing a word or member before its time, our curiosity is raised about what is to follow; and it is agreeable to have our curiosity gratified at the close of the period: such arrangement produceth on the mind an effect similar to a stroke exerted upon the body by the whole collected force of the agent. On the other hand, where a period is so constructed as to admit more than one complete close in the sense, the curiosity of the reader is exhausted at the first close, and what follows appears languid or superfluous: his disappointment contributes also to that appearance, when he finds, contrary to expectation, that the period is not yet finished. Cicero, and after him Quintilian, recommend the verb to the last place. This method evidently tends to suspend the sense till the close of the period; for without the verb the sense cannot be complete: and when the verb happens to be the capital word, which is frequently the case, it ought at any rate to be put last, according to another rule, above laid down. I proceed as usual to illustrate this rule by examples. The following period is placed in its natural order.

We instruct an essential circumstance in epic poetry, I doubt whether a single instance could be given of this species of composition, in any language.
The period thus arranged admits a full close upon the word composition; after which it goes on languidly, and closes without force. This blemish will be avoided by the following arrangement:

Were instructions an essential circumstance in epic poetry, I doubt whether, in any language, a single instance could be given of this species of composition.

Some of our most eminent divines have made use of this Platonic notion, as far as it regards the subsistence of our passions after death, with great beauty and strength of reason. [Spectator, No. 90.

Better thus:

Some of our most eminent divines have, with great beauty and strength of reason, made use of this Platonic notion, &c.

Men of the best sense have been touched, more or less, with these groundless horrors and presages of futurity, upon surveying the most indifferent works of nature. [Spectator, No. 505.

Better,

Upon surveying the most indifferent works of nature, men of the best sense, &c.

She soon informed him of the place he was in, which, notwithstanding all its horrors, appeared to him more sweet than the bower of Mahomet, in the company of his Balsora. [Guardian, No. 167.

Better,

She soon, &c. appeared to him, in the company of his Balsora, more sweet, &c.

The Emperor was so intent on the establishment of his absolute power in Hungary, that he exposed the Empire doubly to desolation and ruin for the sake of it.

Letters on history, vol. i. let. 7. Bolingbroke.

Better,

that for the sake of it he exposed the Empire doubly to desolation and ruin.

None of the rules for the composition of periods are Vol. II. C more
more liable to be abused, than those last mentioned; witness many Latin writers, among the moderns especially, whose style, by inversions too violent, is rendered harsh and obscure. Suspension of the thought till the close of the period, ought never to be preferred before perspicuity. Neither ought such suspension to be attempted in a long period; because in that case the mind is bewildered among a profusion of words: a traveller, while he is puzzled about the road, relishes not the finest prospect.

All the rich presents which Astyages had given him at parting, keeping only some Median horses, in order to propagate the breed of them in Persia, he distributed among his friends whom he left at the court of Ecbatana.

Travels of Cyrus, book 1.

The foregoing rules concern the arrangement of a single period: I add one rule more concerning the distribution of a discourse into different periods. A short period is lively and familiar: a long period, requiring more attention, makes an impression grave and solemn*. In general, a writer ought to study a mixture of long and short periods, which prevent an irksome uniformity, and entertain the mind with variety of impressions. In particular, long periods ought to be avoided till the reader's attention be thoroughly engaged; and therefore a discourse, especially of the familiar kind, ought never to be introduced with a long period: for that reason, the commencement of a letter to a very young lady on her marriage is faulty:

Madam, The hurry and impertinence of receiving and paying visits on account of your marriage, being now over, you are beginning to enter into a course of life, where you will want much advice to divert you from falling into many errors, fopperies, and follies, to which your sex is subject.

See another example, still more faulty, in the commencement of Cicero's oration, Pro Archia poeta.

* Demetrius Phalereus (of Elocution, sect. 44) observes, that long members in a period make an impression of gravity and importance. And the same observation is applicable to periods.
Before we proceed farther, it may be proper to take a review of the rules laid down in this and the preceding section, in order to make some general observations. That order of the words and members of a period is justly termed natural, which corresponds to the natural order of the ideas that compose the thought. The tendency of many of the foregoing rules is to substitute an artificial arrangement, in order to catch some beauty either of sound or meaning for which there is no place in the natural order. But seldom it happens; that in the same period there is place for a plurality of these rules: if one beauty can be retained, another must be relinquished; and the only question is, Which ought to be preferred. This is a question that cannot be resolved by any general rule; if the natural order be not relinquished, a few trials will discover that artificial order which has the best effect; and this exercise, supported by a good taste, will in time make the choice easy. All that can be said in general is, that in making a choice, found ought to yield to signification.

The transposing words and members out of their natural order, so remarkable in the learned languages, has been the subject of much speculation. It is agreed on all hands, that such transposition or inversion beffows upon a period a very sensible degree of force and elevation; and yet writers seem to be at a loss in what manner to account for that effect. Cerceau * ascribes so much power to inversion, as to make it the characteristic of French verse, and the single circumstance which in that language distinguishes verse from prose: and yet he pretends not to say, that it hath any other power but to raise surprize; he must mean curiosity, which is done by suspending the thought during the period, and bringing it out entirely at the close. This indeed is one power of inversion; but neither its sole power, nor even that which is the most remarkable, as is made evident above. But waving censure, which is not an agreeable task, I enter into the matter; and begin with observing, that if conformity between words and their meaning be agreeable, it must of course be

* Reflections sur la poësie Francoise.
agreeable to find the same order or arrangement in both. Hence the beauty of a plain or natural style, where the order of the words corresponds precisely to the order of the ideas. Nor is this the single beauty of a natural style; it is also agreeable by its simplicity and perspicuity. This observation throws light upon the subject: for if a natural style be in itself agreeable, a transfused style cannot be so; and therefore its agreeableness must arise from contributing to some positive beauty that is excluded in a natural style. To be confirmed in this opinion, we need but reflect upon some of the foregoing rules, which make it evident, that language, by means of inversion, is susceptible of many beauties that are totally excluded in a natural arrangement. From these premises it clearly follows, that inversion ought not to be indulged, unless in order to reach some beauty superior to those of a natural style. It may with great certainty be pronounced, that every inversion, which is not governed by this rule, will appear harsh and strained, and be disliked by every one of taste. Hence the beauty of inversion when happily conducted; the beauty, not of an end, but of means, as furnishing opportunity for numberless ornaments that find no place in a natural style: hence the force, the elevation, the harmony, the cadence, of some compositions: hence the manifold beauties of the Greek and Roman tongues, of which living languages afford but faint imitations.

S E C T. III.

Beauty of language from a resemblance between sound and signification.

A Resemblance between the sound of certain words and their signification, is a beauty that has escaped no critical writer, and yet is not handled with accuracy by any of them. They have probably been of opinion, that a beauty so obvious to the feeling, requires no explanation. This is an error; and to avoid it, I shall give examples of the various resemblances between sound and signification, accompanied with an endeavour to explain why such resemblances are beautiful. First of examples where the resemblance between the sound
found and signification is the most entire, and next where the resemblance is less and less so.

There being frequently a strong resemblance of one sound to another, it will not be surprising to find an articulate sound resembling one that is not articulate: thus the sound of a bow-string is imitated by the words that express it:

---

The string let fly,
Twang'd short and sharp, like the thrill swallow's cry.

Odyffey xxi. 449.

The sound of felling trees in a wood:

Loud sounds the ax, redoubling strokes on strokes,
On all sides round the forest hurls her oaks
Headlong. Deep echoing groan the thickets brown,
Then rustling, crackling, crashing, thunder down.

Iliad, xxiii. 144.

But when loud surges lash the sounding shore
The hoarse rough verse should like the torrent roar.

Pope's Essay on Criticism, 369.

No person can be at a loss about the cause of this beauty: it is obviously that of imitation.

That there is any other natural resemblance of sound to signification, must not be taken for granted. There is evidently no resemblance of sound to motion, nor of sound to sentiment. In this matter we are apt to be deceived by artful pronunciation: the same passage may be pronounced in many different tones, elevated or humble, sweet or harsh, brisk or melancholy, so as to accord with the thought or sentiment: such concord must be distinguished from that concord between sound and sense, which is perceived in some expressions independent of artful pronunciation: the latter is the poet's work; the former must be attributed to the reader. Another thing contributes still more to the deceit: in language, sound and sense being intimately connected, the properties of the one are readily communicated to the other; for example, the quality of grandeur, of sweetness, or of melancholy, though belonging to the thought solely, is transferred to the words, which by that means resemble in appearance the thought that is expressed by them.
them*. I have great reason to recommend these observations to the reader, considering how inaccurately the present subject is handled by critics: not one of them distinguishes the natural resemblance of sound and signification, from the artificial resemblances now described; witness Vida in particular, who in a very long passage has given very few examples but what are of the latter kind †.

That there may be a resemblance of articulate sounds to some that are not articulate, is self-evident; and that in fact there exist such resemblances successfully employ'd by writers of genius, is clear from the foregoing examples, and from many others that might be given. But we may safely pronounce, that this natural resemblance can be carried no farther: the objects of the different senses, differ so widely from each other, as to exclude any resemblance; sound in particular, whether articulate or inarticulate, resembles not in any degree taste, smell, nor motion; and as little can it resemble any internal sentiment, feeling, or emotion. But must we then admit, that nothing but sound can be imitated by sound? Taking imitation in its proper sense, as importing a resemblance between two objects, the proposition must be admitted: and yet in many passages that are not descriptive of sound, every one must be sensible of a peculiar concord between the sound of the words and their meaning. As there can be no doubt of the fact, what remains is to inquire into its cause.

Resembling causes may produce effects that have no resemblance; and causes that have no resemblance may produce resembling effects. A magnificent building, for example, resembles not in any degree an heroic action; and yet the emotions they produce, are concordant, and bear a resemblance to each other. We are still more sensible of this resemblance in a song, when the music is properly adapted to the sentiment: there is no resemblance between thought and sound; but there is the strongest resemblance between the emotion raised by music tender and pathetic, and that raised by the com-

* See chap. 2 part i: sect. 5.
† Poet. L. 3. l. 365—454.
plaint of an unsuccessful lover. When we apply this observation to the present subject, it will appear, that in some instances, the sound even of a single word makes an impression resembling that which is made by the thing it signifies; witness the word *running*, composed of two short syllables; and more remarkably the words *rapidity, impetuousity, precipitation*. Brutal manners produce in the spectator an emotion not unlike what is produced by a harsh and rough sound; and hence the beauty of the figurative expression, *rugged* manners. Again, the word *little*, being pronounced with a very small aperture of the mouth, has a weak and faint sound, which makes an impression resembling that made by a diminutive object. This resemblance of effects is still more remarkable where a number of words are connected together in a period; words pronounced in succession make often a strong impression; and when this impression happens to accord with that made by the sense, we are sensible of a complex emotion, peculiarly pleasant; one proceeding from the sentiment, and one from the melody or sound of the words. But the chief pleasure proceeds from having these two concordant emotions combined in perfect harmony, and carried on in the mind to a full close *. Except in the single case where sound is described, all the examples given by critics of sense being imitated in sound, resolve into a resemblance of effects: emotions raised by sound and signification may have a resemblance; but sound itself cannot have a resemblance to any thing but sound.

Proceeding now to particulars, and beginning with those cases where the emotions have the strongest resemblance, I observe, first, That by a number of syllables in succession, an emotion is sometimes raised, extremely similar to that raised by successive motion; which may be evident even to those who are defective in taste, from the following fact, that the term *movement* in all languages is equally apply'd to both. In this manner, successive motion, such as walking, running, galloping, can be imitated by a succession of long or short syllables, or by a due mixture of both: for example, slow

C 4

* See chap. 2. part 4.
motion may be justly imitated in a verse where long syllables prevail; especially when aided by a slow pronunciation:

Illi inter se fælœ magnâ vi brachia tollunt.  
*Georg. iv. 174.*

On the other hand, swift motion is imitated by a succession of short syllables:

*Quadrupedante putrem sonitu quatit ungula campum.*

Again:

*Radit iter liquidum, celeres neque commovet alas.*

Thirdly, A line composed of monosyllables, makes an impression, by the frequency of its pauses, similar to what is made by laborious interrupted motion:

*With many a weary step, and many a groan,  
Up the high hill he heaves a huge round stone.*  
*Odyssëy, xi. 736.*

Firstly march the heavy mules securely flow;  
O'er hills, o'er dales, o'er craggs, o'er rocks they go.  
*Iliad, xxiii. 138.*

Fourthly, The impression made by rough sounds in succession, resembles that made by rough or tumultuous motion: on the other hand, the impression of smooth sounds resembles that of gentle motion. The following is an example of both:

*Two craggy rocks projecting to the main,  
The roaring wind's tempestuous rage restrain;  
Within, the waves in softer murmurs glide,  
And ships secure without their haulers ride.*  
*Odyssëy, iii. 118.*

Another example of the latter:

*Soft is the strain when Zephyr gently blows,  
And the smooth stream in smoother numbers flows.*  
*Essay on Crit. 366.*

Fifthly, Prolonged motion is expressed in an Alexandrine line. The first example shall be of slow motion prolonged:

*A needless Alexandrine ends the song;  
That,*
That, like a wounded snake, drags its flow length along.

*Essay on Crit.* 356.

The next example is of forcible motion prolonged:
The waves behind impel the waves before,
Wide-rolling, foaming high, and tumbling to the shore.

*Iliad,* xiii. 1004.

The last shall be of rapid motion prolonged:
Not so when Swift Camilla scours the plain,
Flies o'er th' unbending corn, and skims along the main.

*Essay on Crit.* 373.

Again, speaking of a rock torn from the brow of a mountain:
Still gath'ring force, it smokes, and urg'd amain,
Whirls, leaps, and thunders down, impetuous to the plain.

*Iliad,* xiii. 197.

Sixthly, A period consisting mostly of long syllables,
that is, of syllables pronounced slow, produceth an emotion
resembling faintly that which is produced by gravity and solemnity. Hence the beauty of the following verse:

*Olli sedato respondit corde Latinus.*

Seventhly, A slow succession of ideas is a circumstance
that belongs equally to settled melancholy, and to
a period composed of polysyllables pronounced slow;
and hence, by similarity of emotions, the latter is imitative of the former:

In those deep solitudes, and awful cells,
Where heav'ly-pensive Contemplation dwells,
And ever-musing Melancholy reigns.

*Pope,* *Eloisa to Abelard.*

Eighthly, A long syllable made short, or a short syllable
made long, raises, by the difficulty of pronouncing
contrary to custom, a feeling similar to that of hard labour:

When Ajax strives some rock's vast weight to throw,
The line too labours, and the words move slow.

*Essay on Crit.* 370.

Ninthly, Harsh or rough words pronounced with difficulty,
ficulty, excite a feeling resembling that which proceeds from the labour of thought to a dull writer:

Juft writes to make his barrennesss appear,
And strains from hard bound brains eight lines a year.

Pope's epifle to Dr Arbuthnot, l. 181.

I shall close with one example more, which of all makes the finest figure. In the first section mention is made of a climax in sound; and in the second of a climax in fenfe. It belongs to the present subject to observe, that when these coincide in the same passage, the concordance of sound and fenfe is delightful: the reader is conscious not only of pleasure from the two climaxes separately, but of an additional pleasure from their concordance, and from finding the fenfe so justly imitated by the sound. In this respect, no periods are more perfect than those borrowed from Cicero in the first section.

The concord between fenfe and sound is not less agreeable in what may be termed an anteclimax, where the progress is from great to little; for this has the effect to make diminutive objects appear still more diminutive. Horace affords a striking example:

Parturiunt montes, nascetur ridiculus mus.

The arrangement here is singularly artful: the first place is occupied by the verb, which is the capital word by its fenfe as well as sound: the close is reserved for the word that is the meanest in fenfe as well as in sound: and it must not be overlooked, that the resembling sounds of the two last syllables give a ludicrous air to the whole.

Reviewing the foregoing examples, it appears to me, contrary to expectation, that in passing from the strongest resemblances to those that are fainter, every step affords additional pleasure. Renewing the experiment again and again, I feel no wavering, but the greatest pleasure constantly from the faintest resemblances. And yet how can this be? for if the pleasure lie in imitation, must not the strongest resemblance afford the greatest pleasure? From this vexing dilemma I am happily relieved, by reflecting on a doctrine established in the chapter of resemblance and contrast, that the pleasure of resemblance is the greatest, where it is least expected, and
and where the objects compared are in their capital circumstances widely different. Nor will this appear surprising, when we descend to familiar examples: it rai-
seth no degree of wonder to find the most perfect re-
femblance between two eggs of the same bird; it is more rare to find such resemblance between two human faces; and upon that account such an appearance raises some degree of wonder: but this emotion rises to a still great-
er height, when we find in a pebble, an agate, or other natural production, any resemblance to a tree or to any organised body. We cannot hesitate a moment, in ap-
plying these observations to the present subject: what occasion of wonder can it be to find one found resem-
bling another, where both are of the same kind? it is not so common to find a resemblance between an articu-
late sound and one not articulate; which accordingly affords some slight pleasure: but the pleasure swells greatly, when we employ sound to imitate things it re-
fembles not otherwise than by the effects produced in the mind.

I have had occasion to observe, that to complete the resemblance between sound and sense, artful pronunci-
ation contributes not a little. Pronunciation therefore may be considered as a branch of the present subject; and with some observations upon it the section shall be concluded.

In order to give a just idea of pronunciation, it must be distinguished from singing: the latter is carried on by notes, requiring each of them a different aperture of the windpipe: the notes properly belonging to the former, are expressed by different apertures of the mouth, without varying the aperture of the windpipe. This how-
ever doth not hinder pronunciation to borrow from sing-
ing, as one sometimes is naturally led to do, in expres-
sing a vehement passion.

In reading, as in singing, there is a key-note: above this note the voice is frequently elevated, to make the sound correspond to the elevation of the subject: but the mind in an elevated state, is disposed to action; therefore, in order to a rest, it must be brought down to the key-note. Hence the term cadence.

The only general rule that can be given for directing the
the pronunciation, is, To found the words in such a manner as to imitate the things they signify. In pronouncing words signifying what is elevated, the voice ought to be raised above its ordinary tone; and words signifying dejection of mind, ought to be pronounced in a low note: to imitate a stern and impetuous passion, the words ought to be pronounced rough and loud: a sweet and kindly passion, on the contrary, ought to be imitated by a soft and melodious tone of voice: in Dryden's ode of *Alexander's feast*, the line, *Faln, faln, faln*, represents a gradual sinking of the mind, and therefore is pronounced with a falling voice by every one of taste, without instruction. In general, words that make the greatest figure ought to be marked with a peculiar emphasis. Another circumstance contributes to the resemblance between sense and sound, which is slow or quick pronunciation: for though the length or shortness of the syllables with relation to each other, be in prose ascertained in some measure, and in verse always; yet taking a whole line or period together, it may be pronounced slow or fast. A period accordingly ought to be pronounced slow, when it expresses what is solemn or deliberate; and ought to be pronounced quick, when it expresses what is brisk, lively, or impetuous.

The art of pronouncing with propriety and grace, being calculated to make the sound an echo to the sense, scarce admits of any other general rule than that above mentioned. It may indeed be branched out into many particular rules and observations: but these belong not properly to the present undertaking, because no language furnisht words to signify the different degrees of high and low, loud and soft, fast and slow. Before these differences can be made the subject of regular instruction, notes must be invented resembling those employ'd in music: we have reason to believe, that in Greece every tragedy was accompanied with such notes, in order to ascertain the pronunciation; but the moderns hitherto have not thought of this refinement. Cicero indeed *], without the help of notes, pretends to give rules for ascertaining the various tones of voice that are proper in expressing

* De oratore, l. 3. cap. 58.
expressing the different passions; and it must be acknowledged, that in this attempt he hath exhausted the whole power of language. At the same time, every person of discernment will perceive, that these rules avail little in point of instruction: the very words he employs, are not intelligible, except to those who beforehand are acquainted with the subject.

To vary the scene a little, I propose to close with a slight comparison between singing and pronouncing. In this comparison, the five following circumstances relative to articulate sound, must be kept in view. 1st, A sound or syllable is harsh or smooth. 2d, It is long or short. 3d, It is pronounced high or low. 4th, It is pronounced loud or soft. And, lastly, A number of words in succession, constituting a period or member of a period, are pronounced slow or quick. Of these five the first depending on the component letters, and the second being ascertained by custom, admit not any variety in pronouncing. The three last are arbitrary, depending on the will of the person who pronounces; and it is chiefly in the artful management of these that just pronunciation consists. With respect to the first circumstance, music has evidently the advantage; for all its notes are agreeable to the ear; which is not always the case of articulate sound. With respect to the second, long and short syllables variously combined, produce a great variety of feet; yet far inferior to the variety that is found in the multiplied combinations of musical notes. With respect to high and low notes, pronunciation is still more inferior to singing; for it is observed by Dionysius of Halicarnassus*, that in pronouncing, i.e. without altering the aperture of the windpipe, the voice is confined within three notes and a half: singing has a much greater compass. With respect to the two last circumstances, pronunciation equals singing.

In this chapter, I have mentioned none of the beauties of language but what arise from words taken in their proper sense. Beauties that depend on the metaphorical and figurative power of words, are reserved to be treated chap. 20.

* De structura orationis, sect. 2.
The music of verse, though handled by every grammarian, merits more attention than it has been honoured with. It is a subject intimately connected with human nature; and to explain it thoroughly, several nice and delicate feelings must be employ'd. But before entering upon it, we must see what verse is, or, in other words, by what mark it is distinguished from prose; a point not so easy as may at first be apprehended. It is true that the construction of verse is governed by precise rules; whereas prose is more loose, and scarce subjected to any rules. But are the many who know nothing of rules, left without means to make the distinction? and even with respect to the learned, must they apply the rule before they can with certainty pronounce whether the composition be prose or verse? This will hardly be maintained; and therefore, instead of rules, the ear must be appealed to as the proper judge. But what gain we by being thus referred to another standard; for it still recurs, By what mark does the ear distinguish verse from prose? The proper and satisfactory answer is, That these make different impressions upon every one who hath an ear. This advances us one step in our inquiry.

Taking it then for granted, that verse and prose make upon the ear different impressions; nothing remains but to explain this difference, and to assign its cause. To this end, I call to my aid an observation made above upon the sound of words, that they are more agreeable to the ear when composed of long or short syllables, than when all the syllables are of the same sort: a continued sound in the same tone, makes not a musical impression: the same note successively renewed by intervals, is more agreeable; but still makes not a musical impression. To produce that impression, variety is necessary as well as number: the successive sounds or syllables, must be some of them long, some of them short; and it also high and low, the music is the more perfect. The musical impression made by a period consisting of long
long and short syllables arranged in a certain order, is what the Greeks call \textit{rhythmus}, the Latins \textit{numerus}, and we \textit{melody} or \textit{measure}. Cicero justly observes, that in one continued found there is no melody: “Numerus “ in continuatione nullus est.” But in what follows he is wide of the truth, if by \textit{numerus} he mean melody or musical measure: “\textit{Distinctio, et equalium et \textit{r}}\textit{ariorum intervallorum percussion, numerum \textit{c}}\textit{c-ficit; “quern in cadentibus guttis, quod intervallis \textit{d}istinguuntur, notare possimus.”} Falling drops, whether with equal or unequal intervals, are certainly not music: we are not sensible of a musical expression but in a succession of long and short notes. And this also was probably the opinion of the author cited, though his expression be a little unguarded*.

It will probably occur, that melody, if it depend on long and short syllables combined in a sentence, may be found in prose as well as in verse; considering especially, that in both, particular words are accented or pronounced in a higher tone than the rest; and therefore that verse cannot be distinguished from prose by melody merely. The observation is just; and it follows, that the distinction between them, since it depends not singly on melody, must arise from the difference of the melody: which is precisely the case; though that difference cannot with any accuracy be explained in words; all that can be said is, that verse is more musical than prose, and its melody more perfect. The difference between verse and prose, resembles the difference in music properly so called between the song and the recitative: and the resemblance is not the less complete, that these differences, like the shades of colours, approximate sometimes so nearly as scarce to be discernible: the melody

* From this passage, however, we discover the etymology of the Latin term for musical expression. Everyone being sensible that there is no music in a continued sound; the first inquiries were probably carried no farther than to discover, that to produce a musical expression a number of sounds is necessary; and musical expression obtained the name of \textit{numerus}, before it was clearly ascertained, that variety is necessary as well as number.
lody of a recitative approaches sometimes to that of a song; which, on the other hand, degenerates sometimes toward a plain recitative. Nothing is more distinguishable from prose, than the bulk of Virgil's Hexameters: many of those composed by Horace, are very little removed from prose: Sapphic verse has a very sensible melody; that, on the other hand, of an Iambic, is extremely faint.*

This more perfect melody of articulate sounds, is what distinguisheth verse from prose. Verse is subject to certain inflexible laws; the number and variety of the component syllables being ascertained, and in some measure the order of succession. Such restraint makes it a matter of difficulty to compose in verse; a difficulty that is not to be surmounted but by a peculiar genius. Useful lessons convey'd to us in verse, are agreeable by the union of music with instruction: but are we for that reason to reject knowledge offered in a plainer dress? That would be ridiculous; for knowledge is of intrinsic merit, independent of the means of acquisition; and there are many, not less capable than willing to instruct us, who have no genius for verse. Hence the use of prose; which, for the reason now given, is not confined to precise rules. There belongs to it, a certain melody of an inferior kind, which, being extremely ornamental, ought to be the aim of every writer; but for succeeding in it, practice is necessary more than genius. Nor do we rigidly insist for melodious prose: provided the work convey instruction, its chief end, we are the less solicitous about its drefs.

Having ascertained the nature and limits of our subject, I proceed to the laws by which it is regulated. These would be endless, were verse of all different kinds to be taken under consideration. I propose therefore to confine the inquiry, to Latin or Greek Hexameter, and to French and English Heroic verse; which perhaps may

* Music, properly so called, is analysed into melody and harmony. A succession of sounds so as to be agreeable to the ear, constitutes melody: harmony arises from coexisting sounds. Verse therefore can only reach melody, and not harmony.
may carry me farther than the reader will chuse to follow. The observations I shall have occasion to make, will at any rate be sufficient for a specimen; and these, with proper variations, may easily be transferred to the composition of other sorts of verse.

Before I enter upon particulars, it must be premised in general, that to verse of every kind, five things are of importance. 1st, The number of syllables that compose a verse. 2d, The different lengths of syllables, i.e. the difference of time taken in pronouncing. 3d, The arrangement of these syllables combined in words. 4th, The pauses or stops in pronouncing. 5th, Pronouncing syllables in a high or a low tone. The three first mentioned are obviously essential to verse: if any of them be wanting, there cannot be that higher degree of melody which distinguisheth verse from prose. To give a just notion of the fourth, it must be observed, that pauses are necessary for three different purposes: one, to separate periods, and members of the same period, according to the sense: another, to improve the melody of verse: and the last, to afford opportunity for drawing breath in reading. A pause of the first kind is variable, being long or short, frequent or less frequent, as the sense requires. A pause of the second kind, being determined by the melody, is in no degree arbitrary. The last fort is in a measure arbitrary, depending on the reader's command of breath. But as one cannot read with grace, unless, for drawing breath, opportunity be taken of a pause in the sense or in the melody, this pause ought never to be distinguished from the others; and for that reason may be laid aside. With respect then to the pauses of sense and of melody, it may be affirmed without hesitation, that their coincidence in verse is a capital beauty: but as it cannot be expected, in a long work especially, that every line should be so perfect; we shall afterward have occasion to see, that the pause necessary for the sense must often, in some degree, be sacrificed to the verse-pause, and the latter sometimes to the former.

The pronouncing syllables in a high or low tone, contributes also to melody. In reading, whether verse or prose, a certain tone is assumed, which may be called the
the key-note; and in that tone the bulk of the words are founded. Sometimes to humour the sense, and sometimes the melody, a particular syllable is founded in a higher tone; and this is termed accenting a syllable, or gracing it with an accent. Opposed to the accent, is the cadence, which I have not mentioned as one of the requisites of verse, because it is entirely regulated by the sense, and hath no peculiar relation to verse. The cadence is a falling of the voice below the keynote at the close of every period; and so little is it essential to verse, that in correct reading the final syllable of every line is accented, that syllable only excepted which closes the period, where the tense requires a cadence. The reader may be satisfied of this by experiments; and for that purpose I recommend to him the Rape of the Lock, which, in point of versification, is the most complete performance in the English language. Let him consult in particular a period canto 2. beginning at line 47. and closed line 52. with the word gay, which only of the whole final syllables is pronounced with a cadence. He may also examine another period in the 5th canto, which runs from line 45. to line 52.

Though the five requisites above mentioned, enter the composition of every species of verse, they are however governed by different rules, peculiar to each species. Upon quantity only, one general observation may be premised, because it is applicable to every species of verse. That syllables, with respect to the time taken in pronouncing, are long or short; two short syllables, with respect to time, being precisely equal to a long one. These two lengths are essential to verse of all kinds; and to no verse, so far as I know, is a greater variety of time necessary in pronouncing syllables. The voice indeed is frequently made to rest longer than usual, upon a word that bears an important signification; but that is done to humour the sense, and is not necessary for melody. A thing not more necessary for melody occurs with respect to accenting, similar to that now mentioned: A word signifying any thing humble, low, or dejected, is naturally, in prose as well as in verse, pronounced in a tone below the keynote.

We are now sufficiently prepared for entering upon particulars;
particulars; beginning with Latin or Greek Hexameter, which are the same. What I have to observe upon that species of verse, will come under the four following heads, number, arrangement, pause, and accent; for as to quantity, what is observed above may suffice.

Hexameter lines, as to time, are all of the same length; being equivalent to the time taken in pronouncing twelve long syllables or twenty-four short. An Hexameter line may consist of seventeen syllables: and when regular and not Spondaic, it never has fewer than thirteen: whence it follows, that where the syllables are many, the plurality must be short; where few, the plurality must be long.

This line is susceptible of much variety as to the succession of long and short syllables. It is however subjected to laws that confine its variety within certain limits: and for ascertaining these limits, grammarians have invented a rule by Daëtyles and Spondees, which they denominate feet. One at first view is led to think, that these feet are also intended to regulate the pronunciation: which is far from being the case; for were one to pronounce according to these feet, the melody of a Hexameter line would be destroy'd, or at best be much inferior to what it is when properly pronounced*. These feet

* After some attention given to this subject, and weighing deliberately every circumstance, I have been forc'd to rest upon the foregoing conclusion, That the Daëtyles and Spondees are no other than artificial measures invented for trying the accuracy of composition. Repeated experiments convince me, that though the sense should be neglected, an Hexameter line read by Daëtyles and Spondees will not be melodiou.s. And the composition of an Hexameter line demonstrates this to be true, without necessity of an experiment; for, as will appear afterward, there must always, in this line, be a capital pause at the end of the fith long syllable, reckoning, as above, two short for one long; and when we measure this line by Daëtyles and Spondees, the pause now mentioned divides always a Daëtyl or a Spondee, without ever coming after either of these feet. Hence it is evi-
feet must be confined to their sole province of regulating the arrangement, for they serve no other purpose. They are withal so artificial and complex, that I am tempted to substitute in their stead, other rules more simple and of more easy application; for example, the following. 1st, The line must always commence with a long syllable, and close with two long preceded by two short. 2d, More than two short can never be found in the line, that if a line be pronounced, as it is scanned, by Daëtyle and Spondees, the pause must utterly be neglected; which consequently destroys the melody, because this pause is essential to the melody of an Hexameter verse. If, on the other hand, the melody be preserved by making that pause, the pronouncing by Daëtyle or Spondees must be abandoned.

What has led grammarians into the use of Daëtyle and Spondees, seems not beyond the reach of conjecture. To produce melody, the Daëtyle and the Spondee, which close every Hexameter line, must be distinctly expressed in the pronunciation. This discovery, joined with another, that the foregoing part of the verse could be measured by the same feet, probably led grammarians to adopt these artificial measures, and perhaps rashly to conclude, that the pronunciation is directed by these feet as the composition is: the Daëtyle and the Spondee at the close, serve indeed to regulate the pronunciation as well as the composition; but in the foregoing part of the line, they regulate the composition only, not the pronunciation.

If we must have feet in verse to regulate the pronunciation, and consequently the melody, these feet must be determined by the pauses. The whole syllables interjected between two pauses ought to be deemed one musical foot; because, to preserve the melody, they must all be pronounced together, without any stop. And therefore, whatever number there are of pauses in a Hexameter line, the parts into which it is divided by these pauses, make just so many musical feet.

Connection obliges me here to anticipate, by observing, that the same doctrine is applicable to English Heroic
in any part of the line, nor fewer than two if any. And, 3d, Two long syllables which have been preceded by two short, cannot also be followed by two short. These few rules fulfil all the conditions of a Hexameter line, with relation to order or arrangement. To these again a single rule may be substituted, for which I have a still greater relish, as it regulates more affirmatively the construction of every part. That I may put this rule into words with the greater facility, I take a hint from the twelve long syllables that compose an Hexameter line to divide it into twelve equal parts or portions, being each of them one long syllable or two short. A portion being thus defined, I proceed to the rule. The 1st, 3d, 5th, 7th, 9th, 11th, and 12th portions, must each of them be one long syllable; the 10th must always be two short syllables; the 2d, 4th, 6th, and 8th, may indifferently be one long or two short. Or to express the thing still more curtly, The 2d, 4th, 6th, and 8th portions may be one long syllable or two short; the 10th must be two short syllables; all the rest must consist each of one long syllable. This fulfils all the conditions of an Hexameter line, and comprehends all the combinations of Daætyles and Spondees that this line admits.

Next in order comes the pause. At the end of every Hexameter line, no ear but must be sensible of a complete close or full pause; the cause of which follows. The two long syllables preceded by two short, which always close an Hexameter line, are a fine preparation for a pause: the reason is, that long syllables, or syllables pronounced slow, resembling a slow and languid motion tending to rest, naturally incline the mind to rest, or,

rheic verse. Considering its composition merely, it is of two kinds; one composed of five Iambi; and one of a Trochæus followed by four Iambi: but these feet afford no rule for pronouncing; the musical feet being obviously those parts of the line that are interjected between two pauses. To bring out the melody, these feet must be expressed in the pronunciation; or, which comes to the same, the pronunciation must be directed by the pauses, without regard to the Iambus or Trochæus.
or, which is the same, to a pause; and to this inclination the two preceding short syllables contribute, which, by contrast, make the flow pronunciation of the final syllables the more conspicuous. Beside this complete close or full pause at the end, others are also requisite for the sake of melody: of which I discover two clearly, and perhaps there may be more. The longest and most remarkable, succeeds the 5th portion: the other, which, being shorter and more faint, may be called the semipause, succeeds the 8th portion. So striking is the pause first mentioned, as to be distinguished even by the rudest ear: the monkish rhymes are evidently built upon it: in which, by an invariable rule, the final word always chimes with that which immediately precedes the pause:

De planctu cudo || metrum cum carmine nudo
Mingere cum bumbis || res est saluberrima lumbis.

The difference of time in the pause and semipause, occasions another difference not less remarkable; that it is lawful to divide a word by a semipause, but never by a pause, the bad effect of which is sensibly felt in the following examples:

Effusus labor, at||que inmitis rupta Tyranni
Again:
Observans nido in||plumes detraxit; at illa
Again,
Loricam quam De||moleo detraxerat ipse

The dividing a word by a semipause has not the same bad effect:

Jamque pedem referens || causas et||vaserat omnes.
Again:
Qualis popula || moerens Philo||melas umbra
Again:
Ludere que vellem || calamum per||misit agrifl.

Lines, however, where words are left entire, without being divided even by a semipause, run by that means much the more sweetly.

Nec gemere aerea || cessabit||turtur absulmo.
Again:
Again:
Quadrupedante putrem || sonitu quatit ungula campum.
Again:
Eurydicen toto || referebant | flumine ripe.

The reason of these observations will be evident upon the highest reflection. Between things so intimately connected in reading aloud, as are sense and sound, every degree of discord is unpleasant to the ear: and for that reason, it is a matter of importance, to make the musical pauses coincide as much as possible with those of the sense; which is requisite, more especially, with respect to the pause, a deviation from the rule being less remarkable in a semipaue. Considering the matter as to melody solely, it is indifferent whether the pauses be at the end of words or in the middle; but when we carry the sense along, it is disagreeable to find a word split into two by a pause, as if there were really two words: and though the disagreeableness here be connected with the sense only, it is by an easy transition of perceptions transferred to the sound; by which means, we conceive a line to be harsh and grating to the ear, when in reality it is only so to the understanding.*

To the rule that fixes the pause after the 5th portion, there is one exception, and not more: if the syllable succeeding the 5th portion be short, the pause is sometimes postponed to it:
Pupillis quos dura || premit custodia matrum

Again:
In terras oppræs| || gravi sub religione

Again:
Et quorum pars magna || sui | quis talia fando

This contributes to diversify the melody; and where the words are smooth and liquid, is not ungraceful; as in the following examples:

Formosam refonare || doces Amaryllida sylvas

Again:
Agricolas, quibus ipsa || procul discordibus armis

* See chap. 2. part 1. sect. 5.
If this pause, placed as aforesaid after the short syllable, happen also to divide a word, the melody by these circumstances is totally annihilated: witness the following line of Ennius, which is plain prose:

Romæ mænia terruït impiger | Hannibal armis.

Hitherto the arrangement of the long and short syllables of an Hexameter line and its different pauses, have been considered with respect to melody: but to have a just notion of Hexameter verse, these particulars must also be considered with respect to sense. There is not, perhaps in any other sort of verse, such latitude in the long and short syllables; a circumstance that contributes greatly to that richness of melody which is remarkable in Hexameter verse, and which made Aristotle pronounce, that an epic poem in any other verse would not succeed*.

One defect however must not be dissembled, that the same means which contribute to the richness of the melody, render it less fit than several other sorts for a narrative poem. With regard to the melody, as above observed, there cannot be a more artful contrivance than to close an Hexameter line with two long syllables preceded by two short: but unhappily this construction proves a great embarrassment to the sense; which will thus be evident. As in general, there ought to be a strict concordance between the thought and the words in which it is dressed; so in particular, every close in the sense ought to be accompanied with a similar close in the sound. In prose this law may be strictly observed; but in verse the same strictness would occasion insuperable difficulties: willing to sacrifice to the melody of verse, some share of the concordance between thought and expression, we freely excuse the separation of the musical pause from that of the sense, during the course of a line; but the close of an Hexameter line is too conspicuous to admit this liberty: for that reason there ought always to be some pause in the sense at the end of every Hexameter line, were it but such a pause as is marked with a comma: and for the same reason, there ought never to be a full close in the sense but at the end of a line, because there the melody is closed. An Hex-

* Poet. cap. 25.
ameter line, to preserve its melody, cannot well admit any greater relaxation; and yet in a narrative poem, it is extremely difficult to adhere strictly to the rule even with these indulgences. Virgil, the chief of poets for verification, is forc’d often to end a line without any close in the sense, and as often to close the sense during the running of a line: though a close in the melody during the movement of the thought, or a close in the thought during the movement of the melody, cannot be agreeable.

The accent, to which we proceed, is not less essential than the other circumstances above handled. By a good ear it will be discerned, that in every line there is one syllable distinguishable from the rest by a capital accent: that syllable making the 7th portion, is invariably long; and in point of time occupies a place nearly at an equal distance from the pause, which succeeds the 5th portion, and the semipause, which succeeds the 8th.

Nec bene promeritis || capitur nec|tangitur ira

Again:
Non sibi sed toto || genitum se|credere mundo

Again:
Qualis spelunca || subitó com|nota columba

In these examples, the accent is laid upon the last syllable of a word; which is favourable to the melody in the following respect, that the pause, which for the sake of reading distinctly must follow every word, gives opportunity to prolong the accent. And for that reason, a line thus accented, has a more spirited air, than where the accent is placed on any other syllable. Compare the foregoing lines with the following.

Alba neque Assyrio || sucâtur | lana veneno

Again:
Panditur interea || domus omnipo|tentis Olympi

Again:
Olli sedato || respondit | corde Latinus

In lines where the pause comes after the short syllable succeeding the 5th portion, the accent is displaced, and rendered less sensible: it seems to be split into two,
and to be laid partly on the 5th portion, and partly on
the 7th, its usual place; as in

Nuda genu, nodoque || finus collecta fluentes
Again:
Formosam resonare || doces Amar|yllida sylvas

Beside this capital accent, slighter accents are laid
upon other portions; particularly upon the 4th, unless
where it consists of two short syllables; upon the 9th,
which is always a long syllable; and upon the 11th,
where the line concludes with a monosyllable. Such
conclusion, by the by, impairs the melody, and for that
reason is not to be indulged unless where it is expressive
of the sense. The following lines are marked with all
the accents.

Ludere quæ véllem calamó permísit agresti
Again:
Et duræ quércus sudábunt róscida mella
Again:
Parturiunt mòntes, nascé tur ridiculómus

Inquiring into the melody of Hexameter verse, we
soon discover, that order or arrangement doth not con-
stitute the whole of it; for when we compare different
lines, equally regular as to the succession of long and
short syllables, the melody is found in very different de-
grees of perfection; which is not occasioned by any par-
ticular combination of Dactyles and Spondees, or of
long and short syllables, because we find lines where
Dactyles prevail and lines where Spondees prevail, e-
qually melodious. Of the former take the following
instance:

Æneadum genitrix hominum divumque voluptas.

Of the latter:

Molli paulatim flavescet campus arista.

What can be more different as to melody than the two
following lines, which, however, as to the succession
of long and short syllables, are constructed precisely in
the same manner?

Ad talos itola diuilla et circumdata palla. Hor.
Spond.
In the former, the pause falls in the middle of a word, which is a great blemish, and the accent is disturbed by a harsh elision of the vowel a upon the particle et. In the latter the pauses and the accent are all of them distinct and full: there is no elision; and the words are more liquid and sounding. In these particulars consists the beauty of an Hexameter line with respect to melody; and by neglecting these, many lines in the Satires and Epistles of Horace are less agreeable than plain prose; for they are neither the one nor the other in perfection: to draw melody from these lines, they must be pronounced without relation to the sense, it must not be regarded, that words are divided by pauses, nor that harsh elisions are multiplied. To add to the account, profaic low-sounding words are introduced; and which is still worse, accents are laid on them. Of such faulty lines take the following instances.

Candida rectaque sit, munda hastenus sit neque longa.
Jupiter exclamat simul atque audirit; at in se.
Custodes, lectica, cinislopes, parasitae.
Optimus est modulator, ut Alfenus Vaper omni.
Nunc illud tantum queram, meritone tibi sit.

Next in order comes English Heroic verse, which shall be examined under the whole five heads, of number, quantity, arrangement, pause, and accent. This verse is of two kinds; one named rhyme or metre, and one blank verse. In the former, the lines are connected two and two by similarity of sound in the final syllables; and two lines so connected are termed a couplet: similarity of sound being avoided in the latter, couplets are banished. These two sorts must be handled separately, because there are many peculiarities in each. Beginning with rhyme or metre, the first article shall be discussed in a few words. Every line consists of ten syllables, five short and five long; from which there are but two exceptions, both of them rare. The first is, where each line of a couplet is made eleven syllables, by an additional short syllable at the end:

There heroes' wits are kept in pond'rous vases,
And beaus' in snuff-boxes and tweezer-cases.

D 2

The
The piece, you think, is incorrect? Why, take it; I'm all submission; what you'd have it, make it.

This licence is sufferable in a single couplet; but if frequent would give disgust.

The other exception concerns the second line of a couplet, which is sometimes stretched out to twelve syllables, termed an Alexandrine line:

A needle's Alexandrine ends the song,
That, like a wounded snake, drags its slow length along.

It doth extremely well when employ'd to close a period with a certain pomp and solemnity, where the subject makes that tone proper.

With regard to quantity, it is unnecessary to mention a second time, that the quantities employ'd in verse are but two, the one double of the other; that every syllable is reducible to one or other of these standards; and that a syllable of the larger quantity is termed long, and of the lesser quantity short. It belongs more to the present article, to examine what peculiarities there may be in the English language as to long and short syllables. Every language has syllables that may be pronounced long or short at pleasure; but the English above all abounds in syllables of that kind: in words of three or more syllables, the quantity for the most part is invariant: the exceptions are more frequent in disyllables: but as to monosyllables, they may, without many exceptions, be pronounced either long or short; nor is the ear hurt by a liberty that is rendered familiar by custom. This shows, that the melody of English verse must depend less upon quantity, than upon other circumstances: in which it differs widely from Latin verse, where every syllable, having but one sound, strikes the ear uniformly with its accustomed impression; and a reader must be delighted to find a number of such syllables, disposed so artfully as to be highly melodious. Syllables variable in quantity cannot possess this power; for though custom may render familiar, both a long and a short pronunciation of the same word; yet the mind wavering between the two sounds, cannot be so much affected as where every syllable has one fixed sound. What I have further to say upon quantity, will come more properly
properly under the following head, of arrangement.
And with respect to arrangement, which may be brought within a narrow compass, the English Heroic line is commonly Iambic, the first syllable short, the second long, and so on alternately through the whole line. One exception there is, pretty frequent, of lines, commencing with a Trochæus, *i. e.* a long and a short syllable: but this affects not the order of the following syllables, which go on alternately as usual, one short and one long. The following couplet affords an example of each kind.

**Some in the fields of purest other play,**

And bask and whiten in the blaze of day.

It is a great imperfection in English verse, that it excludes the bulk of polysyllables, which are the most sounding words in our language; for very few of them have such alternation of long and short syllables as to correspond to either of the arrangements mentioned. English verse accordingly is almost totally reduced to disyllables and monosyllables: *magnanimity* is a sounding word totally excluded: *impetuosity* is still a finer word, by the resemblance of the sound and sense; and yet a negative is put upon it, as well as upon numberless words of the same kind. Polysyllables composed of syllables long and short alternately, make a good figure in verse; for example: *observance, opponent, offensive, pindaric, productive, prolific,* and such others of three syllables. *Imitation, imperfection, misdemeanor, mitigation, moderation, observator, ornamental, regulator,* and others similar of four syllables, beginning with two short syllables, the third long, and the fourth short, may find a place in a line commencing with a Trochæus. I know not if there be any of five syllables. One I know of six, *viz.* *misperception:* but words so composed are not frequent in our language.

One would not imagine without trial, how uncouth false quantity appears in verse; not less than a provincial tone or idiom. The article *the* is one of the few monosyllables that is invariably short: see how harsh it makes a line where it must be pronounced long:

This nymph, to the destruction of mankind,
Again:

Th' adven'trous baron the bright locks admir'd.

Let it be pronounced short, and it reduces the melody almost to nothing: better so however than false quantity. In the following examples we perceive the same defect.

And old impertinence || expel by new.
With varying vanities || from ev'ry part.
Love in these labyrinths || his slaves detains.
New stratagems || the radiant lock to gain.
Her eyes half languishing || half drown’d in tears.
Roar’d for the handkerchief || that caus’d his pain.
Passions like elements || though born to fight.

The great variety of melody conspicuous in English verse, arises chiefly from the pauses and accents; which are of greater importance than is commonly thought. There is a degree of intricacy in this branch of our subject, and it will be difficult to give a distinct view of it; but it is too late to think of difficulties after we are engaged. The pause, which paves the way to the accent, offers itself first to our examination; and from a very short trial, the following facts will be verified. 1st, A line admits but one capital pause. 2d, In different lines, we find this pause after the fourth syllable, after the fifth, after the sixth, and after the seventh. These four places of the pause lay a solid foundation for dividing English Heroic lines into four kinds; and I warn the reader beforehand, that unless he attend to this distinction, he cannot have any just notion of the richness and variety of English versification. Each kind or order hath a melody peculiar to itself, readily distinguishable by a good ear; and I am not without hopes to make the cause of this peculiarity sufficiently evident. It must be observed, at the same time, that the pause cannot be made indifferently at any of the places mentioned: it is the sense that regulates the pause, as will be seen more fully afterward; and consequently, it is the sense that determines of what order every line must be: there can be but one capital musical pause in a line; and that pause ought to coincide, if possible, with a pause in the sense,
Set. IV. Beauty of Language.

...in order that the sound may accord with the sense.

What is said shall be illustrated by examples of each sort or order. And first of the pause after the fourth syllable:

Back through the paths II of pleasing sense I ran
Again,
Profuse of bliss II and pregnant with delight

After the 5th:
So when an angel II by divine command,
With rising tempests II shakes a guilty land.

After the 6th:
Speed the soft intercourse II from soul to soul
Again,
Then from his closing eyes II thy form shall part
After the 7th:
And taught the doubtful battle II where to rage
Again,
And in the smooth description II murmur still

Beside the capital pause now mentioned, inferior pauses will be discovered by a nice ear. Of these there are commonly two in each line; one before the capital pause, and one after it. The former comes invariably after the first long syllable, whether the line begin with a long syllable or a short. The other in its variety imitates the capital pause: in some lines it comes after the 6th syllable, in some after the 7th, and in some after the 8th. Of these semipauses take the following examples.

1st and 8th:
Led | through a sad | variety | of wo.

1st and 7th:
Still | on that breast | enamour'd | let me lie

2d and 8th:
From storms | a shelter | and from heat | a shade

2d and 6th:
Let wealth | let honour | wait | the wedded dame

2d and 7th:
Above | all pain | all passion | and all pride
Even from these few examples it appears, that the place of the last semipause, like that of the full pause, is directed in a good measure by the sense. Its proper place with regard to the melody is after the 8th syllable, so as to finish the line with an Iambus distinctly pronounced, which, by a long syllable after a short, is a preparation for rest: but sometimes it comes after the 6th, and sometimes after the 7th syllable, in order to avoid a pause in the middle of a word, or between two words intimately connected; and so far melody is justly sacrificed to sense.

In discourse of Hexameter verse, it was laid down as a rule, That a full pause ought never to divide a word: such licence deviates too far from the coincidence that ought to be between the pauses of sense and of melody. The same rule must obtain in an English line; and we shall support reason by experiments:

A noble superfluity it craves.

Abhor, a perpetuity should stand.

Are these lines distinguishable from prose? Scarcely, I think.

The same rule is not applicable to a semipause, which, being short and faint, is not sensibly disagreeable when it divides a word.

Relentless walls whose darksome round contains.

For her white virgins hymeneals sing.

In these deep solitudes and awful cells.

It must however be acknowledged, that the melody here suffers in some degree: a word ought to be pronounced without any rest between its component syllables: the semipause must bend to this rule, and thereby scarce remains sensible.

With regard to the capital pause, it is so essential to the melody, that a poet cannot be too nice in the choice of its place, in order to have it clear and distinct. It cannot be in better company than with a pause in the sense; and if the sense require but a comma after the fourth, fifth, sixth, or seventh syllable, it is sufficient for the musical pause. But to make such coincidence essential, would cramp versification too much; and we have
have experience for our authority, that there may be a pause in the melody where the sense requires none. We must not however imagine, that a musical pause may come after any word indifferently: some words, like syllables of the same word, are so intimately connected, as not to bear a separation even by a pause: the separating, for example, a substantive from its article would be harsh and unpleasing: witness the following line, which cannot be pronounced with a pause as marked,

If Delia smile, the || flow'rs begin to spring.

But ought to be pronounced in the following manner,

If Delia smile, || the flow'rs begin to spring.

If then it be not a matter of indifferency where to make the pause, there ought to be rules for determining what words may be separated by a pause, and what are incapable of such separation. I shall endeavour to ascertain these rules; not chiefly for their utility, but in order to unfold some latent principles, that tend to regulate our taste even where we are scarce sensible of them: and to that end, the method that appears the most promising, is to run over the verbal relations, beginning with the most intimate. The first that presents itself, is that of adjective and substantive, being the relation of subject and quality, the most intimate of all: and with respect to such intimate companions, the question is, Whether they can bear to be separated by a pause. What occurs is, that a quality cannot exist independent of a subject; nor are they separable even in imagination, because they make parts of the same idea: and for that reason, with respect to melody as well as sense, it must be disagreeable, to betowe upon the adjective a sort of independent existence, by interjecting a pause between it and its substantive. I cannot therefore approve the following lines, nor any of the sort; for to my taste they are harsh and unpleasing:

Of thousand bright || inhabitants of air.
The sprites of fiery || termagants inflame.
The rest, his many colour'd || robe conceal'd.
The same, his antient || personage to deck.
Ev'n here, where frozen || Chastity retires.
I fit, with sad || civility, I read.
Back to my native || moderation slide.
Or shall we ev’ry || decency confound.
Time was, a sober || Englishman would knock.
And place, on good || security, his gold.
Taste, that eternal || wanderer, which flies.
But ere the tenth || revolving day was run.
First let the just || equivalent be paid.
Go, threat thy thy earth-born || Myrmidons; but here.
Haste to the fierce || Achilles’ tent (he cries).
All but the ever-wakeful || eyes of Jove.
Your own resistless || eloquence employ.

I have upon this article multiplied examples, that in a case where I have the misfortune to dislike what passes current in practice, every man upon the spot may judge by his own taste. And to taste I appeal; for though the foregoing reasoning appears to me just, it is however too subtle to afford conviction in opposition to taste.

Considering this matter superficially, one might be apt to imagine, that it must be the same, whether the adjective go first, which is the natural order, or the substantive, which is indulged by the laws of inversion. But we soon discover this to be a mistake: colour, for example, cannot be conceived independent of the surface coloured; but a tree may be conceived, as growing in a certain spot, as of a certain kind, and as spreading its extended branches all around, without ever thinking of its colour. In a word, a subject may be considered with some of its qualities independent of others; though we cannot form an image of any single quality independent of the subject. Thus then, though an adjective named first be inseparable from the substantive, the proposition does not reciprocate: an image can be formed of the substantive independent of the adjective; and for that reason, they may be separated by a pause, when the substantive takes the lead.

For thee the fates || severely kind ordain.
And curs’d with hearts || unknowing how to yield.

The verb and adverb are precisely in the same condition
dition with the substantive and adjective. An adverb, which modifies the action expressed by the verb, is not separable from the verb even in imagination; and therefore I must also give up the following lines.

And which it much || becomes you to forget.
'Tis one thing madly || to disperse my store.

But an action may be conceived with some of its modifications, leaving out others, precisely as a subject may be conceived with some of its qualities, leaving out others; and therefore, when by inversion the verb is first introduced, it has no bad effect to interject a pause between it and the adverb which follows: this may be done at the close of a line, where the pause is at least as full as that is which divides the line:

While yet he spoke, the Prince advancing drew.
Nigh to the lodge, &c.

The agent and its action come next, expressed in grammar by the active substantive and its verb. Between these, placed in their natural order, there is no difficulty of interjecting a pause: an active being is not always in motion, and therefore it is easily separable in idea from its action: when in a sentence the substantive takes the lead, we know not that action is to follow; and as rest must precede the commencement of motion, this interval is a proper opportunity for a pause.

But when by inversion the verb is placed first, is it lawful to separate it by a pause from the active substantive? I answer, Not; because an action is not in idea separable from the agent, more than a quality from the subject to which it belongs. Two lines of the first rate for beauty, have always appeared to me exceptionable, upon account of the pause thus interjected between the verb and the consequent substantive; and I have now discovered a reason to support my taste:

In these deep solitudes and awful cells,
Where heav'nly-pensive || Contemplation dwells,
And ever-musing || Melancholy reigns.

The point of the greatest delicacy regards the active verb and the passive substantive placed in their natural order. On the one hand, it will be observed, that these words
words signify things which are not separable in idea: killing cannot be conceived without a being that is put to death, nor painting without a surface upon which the colours are spread. On the other hand, an action and the thing on which it is exerted, are not, like subject and quality, united in one individual object: the active substantive is perfectly distinct from that which is passive; and they are connected by one circumstance only, that the action exerted by the former, is exerted upon the latter. This makes it possible to take the action to pieces, and to consider it first with relation to the agent, and next with relation to the patient. But after all, so intimately connected are the parts of the thought, that it requires an effort to make a separation even for a moment: the subtilising to such a degree is not agreeable, especially in works of imagination. The best poets however, taking advantage of this subtilty, scruple not to separate by a pause an active verb from the thing upon which it is exerted. Such pauses in a long work may be indulged; but taken singly, they certainly are not agreeable; and I appeal to the following examples.

The peer now spreads || the glitt'ring forsex wide.
As ever fully'd || the fair face of light.
Repair'd to search || the gloomy cave of Spleen.
Nothing, to make || philosophy thy friend.
Shou'd chance to make || the well dress'd rabble stare.
Or cros's, to plunder || provinces, the main.
These madmen ever hurt || the church or state.
How shall we fill || a library with wit.
What better teach || a foreigner the tongue.
Sure, if I spare || the minister, no rules.
Of honour bind me, not to maul his tools.

On the other hand, when the passive substantive is by inversion first named, there is no difficulty of interjecting a pause between it and the verb, more than when the active substantive is first named. The same reason holds in both, that tho' a verb cannot be separated in idea from the substantive which governs it, and scarcely from the substantive it governs; yet a substantive may always be conceived independent of the verb: when the
passive substantive is introduced before the verb, we know not that an action is to be exerted upon it; therefore we may rest till the action commences. For the sake of illustration take the following examples.

Shrines! where their vigils pale-ey'd virgins keep,
Soon as thy letters trembling I uncloze.
No happier task these faded eyes pursue.

What is said about the pause, leads to a general observation: That the natural order of placing the active substantive and its verb, is more friendly to a pause than the inverted order; but that in all the other connections, inversion affords by far a better opportunity for a pause. And hence one great advantage of blank verse over rhyme; its privilege of inversion giving it a much greater choice of pauses, than can be had in the natural order of arrangement.

We now proceed to the lighter connections, which shall be discussed in one general article. Words connected by conjunctions and prepositions admit freely a pause between them, which will be clear from the following instances:

Assume what sexes and what shape they please.
The light militia of the lower sky.

Connecting particles were invented to unite in a period two substantives signifying things occasionally united in the thought, but which have no natural union: and between two things not only separable in idea, but really distinct, the mind, for the sake of melody, cheerfully admits by a pause a momentary disjunction of their occasional union.

One capital branch of the subject is still upon hand, to which I am directed by what is just now said. It concerns those parts of speech which singly represent no idea, and which become not significant till they be joined to other words: I mean conjunctions, prepositions, articles, and such like accessories, passing under the name of particles. Upon these the question occurs, Whether they can be separated by a pause from the words that make them significant? whether, for example, in the following lines, the separation of the accessory
cessory preposition from the principal substantive, be according to rule?

'The goddess with || a discontented air.

And heighten'd by || the diamond's circling rays.

When vict'm's at || yon altar's foot we lay.

So take it in || the very words of Crecch.

An ensign of || the delegates of Jove.

'Two ages o'er || his native realm he reign'd.

While angels, with || their silver wings o'ershade.

Or the separation of the conjunction from the word that is connected by it with the antecedent word:

Talthybius and || Eurybates the good.

It will be obvious at the first glance, that the foregoing reasoning upon objects naturally connected, are not applicable to words which of themselves are mere cyphers: we must therefore have recourse to some other principle for solving the present question. These particles out of their place are totally insignificant: to give them a meaning, they must be joined to certain words; and the necessity of this junction, together with custom, forms an artificial connection that has a strong influence upon the mind: it cannot bear even a momentary separation, which destroys the sense, and is at the same time contradictory to practice. Another circumstance tends still more to make this separation disagreeable in lines of the first and third order, that it bars the accent, which will be explained afterward, in treating of the accent.

Hitherto we have discoursed upon that pause only which divides the line. We proceed to the pause that concludes the line; and the question is, Whether the same rules be applicable to both. This must be answered by making a distinction. In the first line of a couplet, the concluding pause differs little, if at all, from the pause which divides the line; and for that reason, the rules are applicable to both equally. The concluding pause of the couplet, is in a different condition: it resembles greatly the concluding pause in an Hexameter line: both of them indeed are so remarkable, that they never can be graceful, unless when they accompany
company a pause in the sense. Hence it follows, that a couplet ought always to be finished with some close in the sense; if not a point, at least a comma. The truth is, that this rule is seldom transgressed: in Pope’s works I find very few deviations from the rule: take the following instances.

Nothing is foreign: parts relate to whole;
One all extending, all-preserving soul.
Connects each being—

Another:
To draw fresh colours from the vernal flow’rs,
To steal from rainbows ere they drop in show’rs,
A brighter wash—

I add with respect to pauses in general, that supposing the connection to be so slender as to admit a pause, it follows not that a pause may in every such case be admitted. There is one rule to which every other ought to bend. That the sense must never be wounded or obscured by the music; and upon that account I condemn the following lines:

Ulysses, first || in public cares, she found,
And,
-Who rising, high || the’imperial sceptre rais’d.

With respect to inversion, it appears, both from reason and experiments, that many words which cannot bear a separation in their natural order, admit a pause when inverted. And it may be added, that when two words, or two members of a sentence, in their natural order, can be separated by a pause, such separation can never be amiss in an inverted order. An inverted period, which deviates from the natural train of ideas, requires to be marked in some measure even by pauses in the sense, that the parts may be distinctly known. Take the following examples.

As with cold lips || I kiss’d the sacred veil.
With other beauties || charm my partial eyes.
Full in my view || set all the bright abode.
With words like these || the troops Ulysses rul’d.
Back to th’assembly roll || the thronging train.
Not for their grief || the Grecian host I blame.

The same where the separation is made at the close of the first line of the couplet:

For spirits freed from mortal laws, with ease,
Assume what tenes and what shapes they please.

The pause is tolerable even at the close of the couplet, for the reason just now suggested, that inverted members require some slight pause in the sense:

'Twas where the plane-tree spread its shades around:
The altars heav'd; and from the crumbling ground
A mighty dragon shot.

Thus a train of reasoning hath insensibly led us to conclusions with regard to the musical pause, very different from those in the first section, concerning the separating by an interjected circumstance words intimately connected: One would conjecture, that wherever words are separable by interjecting a circumstance, they should be equally separable by interjecting a pause; but, upon a more narrow inspection, the appearance of analogy vanishes. This will be evident from considering, that a pause in the sense distinguishes the different members of a period from each other; whereas when two words of the same member are separated by a circumstance, all the three make still but one member; and therefore that words may be separated by an interjected circumstance, though these words are not separated by a pause in the sense. This sets the matter in a clear light; for, as observed above, a musical pause is intimately connected with a pause in the sense, and ought, as far as possible, to be governed by it: particularly a musical pause ought never to be placed where a pause is excluded by the sense, as, for example, between the adjective and following substantive, which make parts of the same idea; and still less between a particle and the word that makes it significant.

Abstractive at present from the peculiarity of melody arising from the different pauses, it cannot fail to be observed in general, that they introduce into our verse no slight degree of variety. A number of uniform lines having all the same pause, are extremely fatiguing, which
is remarkable in the French versification. This imperfection will be discerned by a fine ear even in the shortest succession, and becomes intolerable in a long poem. Pope excels in the variety of his melody, which indeed is not less perfect of its kind than that of Virgil.

From what is last said, there ought to be one exception: uniformity in the members of a thought, demands equal uniformity in the verbal members which express that thought. When therefore resembling objects or things are expressed in a plurality of verse-lines, these lines in their structure ought to be as uniform as possible, and the pauses in particular ought all of them to have the same place. Take the following examples.

By foreign hands || thy dying eyes were clos'd,
By foreign hands || thy decent limbs compos'd,
By foreign hands || thy humble grave adorn'd.

Again:
Bright as the sun || her eyes the gazers strike,
And, like the sun, || they shine on all alike.

Speaking of Nature, or the God of Nature:

Warms in the sun || refreshes in the breeze,
Glows in the stars || and blossoms in the trees,
Lives through all life || extends through all extent,
Spreads undivided || operates unspent.

Pauses are like to remain longer upon hand than was expected; for the subject is not yet exhausted. It is laid down above, that English Heroic verse admits no more but four capital pauses; and that the capital pause of every line is determined by the sense to be after the fourth, the fifth, the sixth, or seventh syllable. That this doctrine holds true so far as melody alone is concerned, will be testify'd by every good ear. At the same time I admit, that this rule may be varied where the sense or expression requires a variation; and that so far the melody may justly be sacrificed. Examples accordingly are not unfrequent, in Milton especially, of the capital pause being after the first, the second, or the third syllable. And that this licence may be taken, even gracefully, when it adds vigor to the expression, will be clear from the following example. Pope, in his translation
translation of Homer, describes a rock broke off from
a mountain, and hurling to the plain, in the following
words.

From steep to steep the rolling ruin bounds;
At every shock the crackling wood resounds;
Still gath'ring force, it smokes; and urg'd amain,
Whirls, leaps, and thunders down, impetuous to the
plain:
There stops || So Hector. Their whole force he prov'd,
Resilient when he rag'd; and when he stopt, unmov'd.

In the penult line the proper place of the musical pause
is at the end of the fifth syllable; but it enlivens the
expression by its coincidence with that of the sense at
the end of the second syllable: the stopping short be-
fore the usual pause in the melody, aids the impression
that is made by the description of the stone's stopping
short; and what is lost to the melody by this artifice, is
more than compensated by the force that is added to the
description. Milton makes a happy use of this licence:

witnesses the following examples from his *Paradise lost*.

---
Thus with the year
Seasons return, but not to me returns
Day || or the sweet approach of even or morn.
Celestial voices to the midnight air
Sole || or responsive each to others note.
And over them triumphant Death his dart
Shook || but delay'd to strike.

---
And wild uproar
Stood rul'd || flood vast infinitude confin'd.

---
And hard'ning in his strength
Glories || for never since created man
Met such embodied force:
From his slack hand the garland wreath'd for Eve
Down drop'd || and all the faded roses shed.
Of unessential night, receives him next,
Wide gaping || and with utter loss of being
Threatens him, &c.

---
For now the thought
Both of loft happiness and lasting pain
Torments him || round he throws his baleful eyes, &c.
If we consider the foregoing passages with respect to melody singly, the pauses are undoubtedly out of their proper place; but being united with those of the sense, they enforce the expression, and enliven it greatly; for, as has been more than once observed, the beauty of expression is communicated to the sound, which, by a natural deception, makes even the melody appear more perfect than if the musical pauses were regular.

To explain the rules of accenting, two general observations must be premised. The first is, that accents have a double effect: they contribute to the melody, by giving it air and spirit; they contribute not less to the sense, by distinguishing important words from others *. These two effects can never be separated, without impairing the concord that ought to subsist between the thought and the melody: an accent, for example, placed on a low word, has the effect to burlesque it, by giving it an unnatural elevation; and the injury thus done to the sense does not rest there, for it seems also to injure the melody. Let us only reflect what a ridiculous figure a particle must make with an accent or emphasis put upon it, a particle that of itself has no meaning, and that serves only, like cement, to unite words significant. The other general observation is, That a word of whatever number of syllables, is not accented upon more than one of them. The reason is, that the object is set in its best light by a single accent, so as to make more than one unnecessary for the sense: and if another be added, it must be for the sound merely; which would be a transgression of the foregoing rule, by separating a musical accent from that which is requisite for the sense.

Keeping in view the foregoing observations, the doctrine of accenting English Heroic verse is extremely simple. In the first place, accenting is confined to the long syllables; for a short syllable is not capable of an accent. In the next place, as the melody is enriched in proportion to the number of accents, every word that has a long syllable may be accented; unless the sense interpose,

* An accent considered with respect to sense is termed emphasis.
terpofe, which rejects the accepting a word that makes no-figure by its significature. According to this rule, a line may admit five accents; a case by no means rare.

But supposing every long syllable to be accented, there is, in every line, one accent that makes a greater figure than the rest, being that which precedes the capital pause. It is distinguished into two kinds; one that is immediately succeeded by the pause, and one that is divided from the pause by a short syllable. The former belongs to lines of the first and third order; the latter to those of the second and fourth. Examples of the first kind:

Smooth flow the waves || the zephyrs gently play.
Belinda smil'd || and all the world was gay.
He rais'd his azure wand || and thus began.

Examples of the other kind:

There lay three garters || half a pair of gloves,
And all the trophies || of his former loves.
Our humble province || is to tend the fair,
Not a less pleasing || though less glorious care.
And heu triumphal arches || to the ground.

These accents make different impressions on the mind, which will be the subject of a following speculation. In the mean time, it may be safely pronounced a capital defect in the composition of verse, to put a low word, incapable of an accent, in the place where this accent should be: this bars the accent altogether; than which I know no fault more subversive of the melody, if it be not the barring a pause altogether. I may add affirmatively, that no single circumstance contributes more to the energy of verse, than to have the place where this accent should be, occupied by a word of an important significature, such as merits a peculiar emphasis. To show the bad effect of excluding the capital accent, I refer the reader to some instances given above *, where particles are separated by a pause from the capital words that make them significant; and which particles ought, for the sake of the melody, to be accented, were they capable.

* Page 136.
capable of an accent. Add to these the following instances from the essay on Criticism.

Of leaving what is natural and fit. \textit{line 448.}
Not yet purg'd off, of spleen and four disdain. \textit{l. 528.}
No pardon vile obscenity should find. \textit{l. 531.}
When love was all an easy monarch's care. \textit{l. 537.}
For 'tis but half a judge's task, to know. \textit{l 562.}
'Tis not enough, taste, judgment, learning, join. \textit{l. 563.}
That only makes superior sense belov'd. \textit{l. 578.}
Whose right it is, uncensur'd, to be dull. \textit{l. 590.}
'Tis best sometimes your censure to restrain. \textit{l. 597.}

When this fault is at the end of a line that closes a couplet, it leaves not the least trace of melody:
But of this frame the bearings, and the ties,
The strong connections, nice dependencies.

In a line expressive of what is humble or dejected, it improves the resemblance between the sound and sense to exclude the capital accent. This, to my taste, is a beauty in the following lines.

In these deep solitudes and awful cells
The poor inhabitant beholds in vain.

To conclude this article, the accents are not, like the syllables, confined to a certain number: some lines have no fewer than five, and there are lines that admit not above one. This variety, as we have seen, depends entirely on the different powers of the component words: particles, even where they are long by position, cannot be accented; and polysyllables, whatever space they occupy, admit but one accent. Polysyllables have another defect, that they generally exclude the full pause. It is shown above, that few polysyllables can find place in the construction of English verse; and here are reasons for excluding them, could they find place.

I am now ready to fulfil a promise concerning the four sorts of lines that enter into English Heroic verse. That these have, each of them, a peculiar melody distinguishable by a good ear, I ventured to suggest, and promised to account for: and though the subject is extremely
tremely delicate, I am not without hopes of making good my engagement. But first, by way of precaution, I warn the candid reader not to expect this peculiarity of modulation in every instance. The reason why it is not always perceptible has been mentioned more than once, viz. that the thought and expression have a great influence upon the melody; so great, as in many instances to make the poorest melody pass for rich and spirited. This consideration makes me insist upon a concession or two that will not be thought unreasonable: first, That the experiment be tried upon lines equal with respect to the thought and expression; for otherwise one may easily be misled in judging of the melody: and next, That these lines be regularly accented before the pause; for upon a matter abundantly refined in itself, I would not willingly be embarrassed with faulty and irregular lines.

These preliminaries being adjusted, I begin with some general observations, that will save repeating the same thing over and over upon each particular case. And, first, an accent succeeded by a pause, as in lines of the first and third order, makes a much greater figure than where the voice goes on without a stop. The fact is so certain, that no person who has an ear can be at a loss to distinguish that accent from others. Nor have we far to seek for the efficient cause: the elevation of an accenting tone produceth in the mind a similar elevation, which continues during the pause*: but where the pause is separated from the accent by a short syllable, as in lines of the second and fourth order, the impression made by the accent is more slight when there is no stop, and

* Hence the liveliness of the French language as to found, above the English; the last syllable in the former being generally long and accented, the long syllable in the latter being generally as far back in the word as possible, and often without an accent. For this difference I find no cause so probable as temperament and disposition; the French being brisk and lively, the English sedate and reserved: and this, if it hold, is a pregnant instance of a resemblance between the character of a people and that of their language.
and the elevation of the accent is gone in a moment by the falling of the voice in pronouncing the short syllable that follows. The pause also is sensibly affected by the position of the accent: in lines of the first and third order, the close conjunction of the accent and pause, occasions a sudden stop without preparation, which rouses the mind, and bestows on the melody a spirited air: when, on the other hand, the pause is separated from the accent by a short syllable, which always happens in lines of the second and fourth order, the pause is soft and gentle; for this short unaccented syllable succeeding one that is accented, must of course be pronounced with a falling voice, which naturally prepares for a pause; and the mind falls gently from the accented syllable, and slides into rest as it were insensibly. Further, the lines themselves derive different powers from the position of the pause, which will thus appear. A pause after the fourth syllable divides the line into two unequal portions, of which the largest comes last: this circumstance resolving the line into an ascending series, makes an impression in pronouncing like that of mounting upward; and to this impression contributes the redoubled effort in pronouncing the largest portion, which is last in order. The mind has a different feeling when the pause succeeds the fifth syllable, which divides the line into two equal parts: these parts, pronounced with equal effort, are agreeable by their uniformity. A line divided by a pause after the sixth syllable, makes an impression opposite to that first mentioned: being divided into two unequal portions, of which the shortest is last in order, it appears like a slow descending series; and the second portion being pronounced with less effort than the first, the diminished effort prepares the mind for rest. And this preparation for rest is still more sensibly felt where the pause is after the seventh syllable, as in lines of the fourth order.

To apply these observations is an easy task. A line of the first order is of all the most spirited and lively: the accent, being followed instantly by a pause, makes an illustrious figure: the elevated tone of the accent elevates the mind: the mind is supported in its elevation by the sudden unprepared pause which rouses and animates:
mates: and the line itself, representing by its unequal division an ascending series, carries the mind still higher, making an impression similar to that of mounting upward. The second order has a modulation sensibly sweet, soft, and flowing: the accent is not so sprightly as in the former, because a short syllable intervenes between it and the pause: its elevation, by the same means, vanishes instantaneously: the mind, by a falling voice, is gently prepared for a stop: and the pleasure of uniformity from the division of the line into two equal parts, is calm and sweet. The third order has a modulation not so easily expressed in words: it in part resembles the first order, by the liveliness of an accent succeeded instantly by a full pause: but then the elevation occasioned by this circumstance, is balanced in some degree by the remitted effort in pronouncing the second portion, which remitted effort has a tendency to rest. Another circumstance distinguishes it remarkably: its capital accent comes late, being placed on the sixth syllable; and this circumstance befalls on it an air of gravity and solemnity. The last order resembles the second in the mildness of its accent, and softness of its pause; it is still more solemn than the third, by the lateness of its capital accent: it also possesses in a higher degree than the third, the tendency to rest; and by that circumstance is of all the best qualified for closing a period in the completest manner.

But these are not all the distinguishing characters of the different orders. Each order also, is distinguished by its final accent and pause: the unequal division in the first order, makes an impression of ascending; and the mind at the close is in the highest elevation, which naturally prompts it to put a strong emphasis upon the concluding syllable, whether by raising the voice to a sharper tone, or by expressing the word in a fuller tone. This order accordingly is of all the least proper for concluding a period, where a cadence is proper, and not an accent. The second order, being destitute of the impression of ascent, cannot rival the first order in the elevation of its concluding accent, nor consequently in the dignity of its concluding pause; for these have a mutual influence. This order, however, with respect to
to its close, maintains a superiority over the third and fourth orders: in these the close is more humble, being brought down by the impression of descent, and by the remitted effort in pronouncing; considerably in the third order, and still more considerably in the last. According to this description, the concluding accents and pauses of the four orders being reduced to a scale, will form a descending series probably in an arithmetical progression.

After what is said, will it be thought refining too much to suggest, that the different orders are qualified for different purposes, and that a poet of genius will be naturally led to make a choice accordingly? I cannot think this altogether chimerical. As it appears to me, the first order is proper for a sentiment that is bold, lively, or impetuous; the third order is proper for subjects grave, solemn, or lofty; the second for what are tender, delicate, or melancholy, and in general for all the sympathetic emotions; and the last for subjects of the same kind, when tempered with any degree of solemnity. I do not contend, that any one order is fitted for no other talk than that assigned it; for at that rate, no sort of melody would be left for accompanying thoughts that have nothing peculiar in them. I only venture to suggest, and I do it with diffidence, that each of the orders is peculiarly adapted to certain subjects, and better qualified than the others for expressing such subjects. The best way to judge is by experiment; and to avoid the imputation of a partial search, I shall confine my instances to a single poem, beginning with the first order.

On her white breast, a sparkling cross she wore,  
Which Jews might kiss, and infidels adore.  
Her lively looks a sprightly mind disclose,  
Quick as her eyes, and as unfix'd as those:  
Favours to none, to all she smiles extends;  
Oft she rejects, but never once offends.  
Bright as the sun, her eyes the gazers strike,  
And, like the sun, they shine on all alike.  
Yet graceful ease, and sweetness void of pride,  
Might hide her faults, if belles had faults to hide:  
If to her share some female errors fall,  
Look on her face, and you'll forget 'em all.

*Rape of the Lock.*
In accounting for the remarkable liveliness of this passage, it will be acknowledged by every one who has an ear, that the melody must come in for a share. The lines, all of them, are of the first order; a very unusual circumstance in the author of this poem, so eminent for variety in his verification. Who can doubt, that, in this passage, he has been led by delicacy of taste to employ the first order preferably to the others?

Second order.

Our humble province is to tend the fair,
Not a less pleasing, though less glorious care;
'To save the powder from too rude a gale,
Nor let th' imprison'd essences exhale;
'To draw fresh colours from the vernal flow'rs;
'To steal from rainbows, ere they drop their show'rs, &c.

Again:
Oh, thoughtless mortals! ever blind to fate,
'Too soon dejected, and too soon elate.
Sudden, these honours shall be snatch'd away,
And curs'd for ever this victorious day.

Third order.

To fifty chosen sylphs, of special note,
We trust th' important charge, the petticoat.

Again:
Oh say what stranger cause, yet unexplor'd,
Could make a gentle belle reject a lord?

A plurality of lines of the fourth order, would not have a good effect in succession; because, by a remarkable tendency to rest, their proper office is to close a period. The reader, therefore, must be satisfied with instances where this order is mixed with others.

Not louder shrieks to pitying Heav'n are cast,
When husbands, or when lap dogs, breathe their last.

Again:
Steel could the works of mortal pride confound,
And hew triumphal arches to the ground.

Again:
She sees, and trembles at th' approaching ill,
Just in the jaws of ruin, and codille.

Again:
Again:
With earnest eyes, and round unthinking face,
He first the snuff-box open’d, then the case.

And this suggests another experiment, which is, to set the different orders more directly in opposition, by giving examples where they are mixed in the same passage.

First and second orders.
Sol through white curtains shot a tim'rous ray,  
And ope’d those eyes that must eclipse the day.

Again:
Not youthful kings in battle seiz’d alive,  
Not scornful virgins who their charms survive,  
Not ardent lovers robb’d of all their bliss,  
Not antient ladies when refus’d a kiss,  
Not tyrants fierce that unrepenting die,  
Not Cynthia when her mantua’s pin’d awry,  
E’er felt such rage, resentment, and despair,  
As thou, sad virgin! for thy ravish’d hair.

First and third.
Think what an equipage thou hast in air,  
And view with scorn two pages and a chair.

Again:
What guards the purity of melting maids,  
In courtly balls, and midnight masquerades,  
Safe from the treach’rous friend, the daring spark,  
The glance by day, the whisper in the dark?

Again:
With tender billet-doux he lights the pyre,  
And breathes three am’rous sighs to raise the fire;  
Then prostrate falls, and begs, with ardent eyes,  
Soon to obtain, and long possess the prize.

Again:
Jove’s thunder roars, heav’n trembles all around,  
Blue Neptune storms, the bellowing deeps refund,  
Earth shakes her nodding tow’rs, the ground gives way,  
And the pale ghosts start at the flash of day!

Second and third.
Sunk in Thalestris’ arms, the nymph he found,  
Her eyes dejected, and her hair unbound.

E 2

Again:
On her heav'd bosom hung her drooping head,
Which with a sigh she rais'd; and thus she said.

Musing on the foregoing subject, I begin to doubt
whether all this while I have not been in a reverie, and
whether the scene before me, full of objects new and
singular, be not mere fairy-land. Is there any truth in
the appearance, or is it wholly a work of imagination?
We cannot doubt of its reality; and we may with affu-
rance pronounce, that great is the merit of English He-
roic verse: for though uniformity prevails in the arrange-
ment, in the equality of the lines, and in the resem-
blance of the final sounds; variety is still more con-
spicuous in the pauses and in the accents, which are diver-
sified in a surprising manner. Of the beauty that results
from a due mixture of uniformity and variety *, many
instances have already occurred, but none more illustri-
ous than English verification: however rude it may be
in the simplicity of its arrangement, it is highly melo-
dious by its pauses and accents, so as already to rival
the most perfect species known in Greece or Rome; and
it is no disagreeable prospect to find it susceptible of
still greater refinement.

We proceed to blank verse, which hath so many cir-
cumstances in common with rhyme, that what is pecu-
liar to it may be brought within a narrow compass.
With respect to form, it differs from rhyme in rejecting
the jingle of similar sounds, which purifies it from a child-
ish pleasure. But this improvement is a trifle com-
pared with what follows. Our verse is extremely cramped
by rhyme; and the great advantage of blank verse
is, that, being free from the fetters of rhyme, it is at
liberty to attend the imagination in its boldest flights.
Rhyme necessarily divides verse into couplets; each
couplet makes a complete musical period, the parts of
which are divided by pauses, and the whole summed
up by a full close at the end; the melody begins anew
with the next couplet; and in this manner a com-
position in rhyme proceeds couplet after couplet. I
have often had occasion to mention the correspondance
and concord that ought to subsist between sound and
sense;

* See chap. 9.
Sect. IV. BEAUTY OF LANGUAGE.

103

fense; from which it is a plain inference, that if a couplet be a complete period with regard to melody, it ought regularly to be the same with regard to fense. As it is extremely difficult to support such strictness of composition, licences are indulged, as explained above; which however must be used with discretion, so as to preserve some degree of concord between the fense and the music: there ought never to be a full close in the fense but at the end of a couplet; and there ought always to be some pause in the fense at the end of every couplet: the same period as to fense may be extended through several couplets; but in that case each couplet ought to contain a distinct member, distinguished by a pause in the fense as well as in the found; and the whole ought to be closed with a complete cadence *. Rules such as these, must confine rhyme within very narrow bounds: a thought of any extent, cannot be reduced within its compass; the fense must be curtailed and broken into parts, to make it square with the curtness of the melody; and besides, short periods afford no latitude for inversion.

I have examined this point with the greater accuracy, in order to give a just notion of blank verse; and to show that a slight difference in form may produce a very great difference in substance. Blank verse has the same pauses and accents with rhyme, and a pause at the end of every line, like what concludes the first line of a couplet. In a word, the rules of melody in blank verse, are the same that obtain with respect to the first line of a couplet; but being disengaged from rhyme, or from couplets, there is access to make every line run into another, precisely as to make the first line of a couplet run into the second. There must be a musical pause at the end of every line; but this pause is so slight as not to require a pause in the fense: and accordingly the fense may

* This rule is quite neglected in French verification. Even Boileau makes no difficulty, to close one subject with the first line of a couplet, and to begin a new subject with the second. Such licence, however sanctified by practice, is unpleasant by the discordance between the pauses of the fense and of the melody.
may be carried on with or without pauses, till a period of the utmost extent be completed by a full close both in the sense and the sound: there is no restraint, other than that this full close be at the end of a line; and this restraint is necessary in order to preserve a coincidence between sense and sound, which ought to be aimed at in general, and is indispensable in the case of a full close, because it has a striking effect. Hence the aptitude of blank verse for inversion: and consequently the lustre of its pauses and accents; for which, as observed above, there is greater scope in inversion, than when words run in their natural order.

In the second section of this chapter it is shown, that nothing contributes more than inversion to the force and elevation of language: the couplets of rhyme confine inversion within narrow limits; nor would the elevation of inversion, were there accents for it in rhyme, readily accord with the humbler tone of that sort of verse. It is universally agreed, that the loftiness of Milton's style supports admirably the sublimity of his subject; and it is not less certain, that the loftiness of his style arises chiefly from inversion. Shakefpear deals little in inversion: but his blank verse, being a sort of measured prose, is perfectly well adapted to the stage, where laboured inversion is extremely improper, because in dialogue it never can be natural.

Hitherto I have considered that superior power of expression which verse acquires by laying aside rhyme. But this is not the only ground for preferring blank verse: it has another preferable quality not less signal; and that is, a more extensive and more complete melody. Its music is not, like that of rhyme, confined to a single couplet, but takes in a great compass, so as in some measure to rival music properly so called. The interval between its cadences may be long or short at pleasure; and, by that means, its melody, with respect both to richness and variety, is superior far to that of rhyme; and superior even to that of the Greek and Latin Hexameter. Of this observation no person can doubt who is acquainted with the Paradise lost: in which work there are indeed many carelesls lines; but at every turn it shines out in the richest melody as well as in the sublimest sentiments. Take the following specimen.
Now Morn her rosy steps in th' eastern clime
Advancing, bow'd the earth with orient pearl;
When Adam wak'd, so custom'd, for his sleep
Was aery light from pure digestion bred,
And temp'rate vapours bland, which th' only found
Of leaves and fuming rills, Aurora's fan,
Lightly dispers'd, and the thrill matin song
Of birds on every bough; so much the more
His wonder was to find unwaken'd Eve
With tresses discompos'd, and glowing cheek,
As through unquiet rest: he on his side
Leaning half-rais'd, with looks of cordial love
Hung over her enamour'd, and beheld
Beauty, which, whether waking or asleep,
Shot forth peculiar graces; when with voice
Mild, as when Zephyrus on Flora breathes,
Her hand soft touching, whisper'd thus. Awake,
My fairest, my espous'd, my latest found,
Heaven's last best gift, my ever-new delight,
Awake; the morning shines, and the fresh field
Calls us; we lose the prime, to mark how spring
Our tendered plants, how blows the citron grove,
What drops the myrrh, and what the balmy reed,
How nature paints her colours, how the bee
Sits on the bloom extracting liquid sweet.

Book 5. l. i.

Comparing Latin Hexameter with English Heroic rhyme, the former has obviously the advantage in the following particulars. It is greatly preferable as to arrangement, by the latitude it admits in placing the long and short syllables. Secondly, the length of an Hexameter line hath a majestic air: ours, by its shortness is indeed more brisk and lively, but much less fitted for the sublime. And, thirdly, the long high-founding words that Hexameter admits, add greatly to its majesty. To compensate these advantages, English rhyme possesseth a greater number and greater variety both of pauses and of accents. These two sorts of verse stand indeed pretty much in opposition: in Hexameter, great variety of arrangement, none in the pauses nor accents; in English rhyme, great variety in the pauses and accents, very little in the arrangement.
In blank verse are united, in a good measure, the several properties of Latin Hexameter and English rhyme; and it possesses besides many signal properties of its own. It is not confined, like Hexameter, by a full close at the end of every line; nor, like rhyme, by a full close at the end of every couplet. Its construction, which admits the lines to run into each other, gives it a still greater majesty than arises from the length of a Hexameter line. By the same means, it admits inversion even beyond the Latin or Greek Hexameter; for these suffer some confinement by the regular closes at the end of every line. In its music it is illustrious, above all: the melody of Hexameter verse, is circumscribed to a line; and of English rhyme, to a couplet: the melody of blank verse is under no confinement, but enjoys the utmost privilege that the melody of verse is susceptible of; which is, to run hand in hand with the sense. In a word, blank verse is superior to Hexameter in many articles; and inferior to it in none, save in the latitude of arrangement, and in the use of long words.

In French Heroic verse, there are found, on the contrary, all the defects of Latin Hexameter and English rhyme, without the beauties of either: subjected to the bondage of rhyme, and to the full close at the end of every couplet, it is also extremely fatiguing by uniformity in its pafes and accents: the line invariably is divided by the pause into two equal parts, and the accent is invariably placed before the pause:

Jeune et vaillant heros || dont la haute sageffe  
N'est point la fruit tardif || d'une lente vicilleffe.

Here every circumstance contributes to a tiresome uniformity: a constant return of the same pause and of the same accent, as well as an equal division of every line; which fatigue the ear without intermission or change. I cannot set this matter in a better light, than by presenting to the reader a French translation of the following passage of Milton:

Two of far nobler shape, erect and tall,  
Godlike erect, with native honour clad,  
In naked majesty, seem'd lords of all;  
And worthy seem'd, for in their looks divine

The
The image of their glorious Maker lone,  
Truth, wisdom, sanctitude severe and pure,  
Severe, but in true filial freedom plac’d;  
Whence true authority in men: though both  
Not equal, as their sex not equal seem’d;  
For contemplation he and valour form’d,  
For softness she and sweet attractive grace,  
He for God only, she for God in him.

Were the pauses of the sense and sound in this passage but a little better assorted, nothing in verse could be more melodious. In general, the great defect of Milton’s versification, in other respects admirable, is the want of coincidence between the pauses of the sense and sound.

The translation is in the following words:

Ce lieux délicieux, ce paradis charmant,  
Reçoit deux objets son plus bel ornement;  
Leur port majestueux, et leur démarche allière,  
Semble leur mériter sur la nature entière  
Ce droit de commander que Dieu leur a donné.  
Sur leur auguste front de gloire couronné,  
Du souverain du ciel drille la ressemblance;  
Dans leur simples regards éclate l’innocence,  
L’adorable candeur, l’aimable vérité,  
La raison, la sagesse, et la sévérité,  
Qu’adoucit la prudence, et cet air de droiture  
Du visage des rois respectable parure.

Ces deux objets divins n’ont pas les mêmes traits,  
Ils paraissent formés, quoique tous deux parfaits;  
L’un pour la majesté, la force, et la noblesse;  
L’autre pour la douceur, la grâce, et la tendresse;  
Celui ci pour Dieu seul, l’autre pour l’homme encor.

Here the sense is fairly translated, the words are of equal power, and yet how inferior the melody!

Many attempts have been made to introduce Hexameter verse into the living languages, but without success. The English language, I am inclined to think, is not susceptible of this melody: and my reasons are these. First, the polysyllables in Latin and Greek are finely diversified by long and short syllables, a circumstance that qualifies them for the melody of Hexameter verse: ours
are extremely ill qualified for that service, because they superabound in short syllables. Secondly, the bulk of our monosyllables are arbitrary with regard to length, which is an unlucky circumstance in Hexameter: for though custom, as observed above, may render familiar a long or a short pronunciation of the same word, yet the mind wavering between the two sounds, cannot be so much affected with either, as with a word that hath always the same sound; and for that reason, arbitrary sounds are ill fitted for a melody which is chiefly supported by quantity: in Latin and Greek Hexameter, invariable sounds direct and ascertain the melody: English Hexameter would be destitute of melody, unless by artful pronunciation; because of necessity the bulk of its sounds must be arbitrary. The pronunciation is easy in a simple movement of alternate long and short syllables; but would be perplexing and unpleasant in the diversified movement of Hexameter verse.

Rhyme makes so great a figure in modern poetry, as to deserve a solemn trial. I have for that reason reserved it to be examined with deliberation; in order to discover, if I can, its peculiar beauties, and the degree of merit it is intitled to. The first view of this subject leads naturally to the following reflection: "That rhyme having no relation to sentiment, nor any effect upon the ear other than a mere jingle, ought to be banished all compositions of any dignity, as affording but a trifling and childish pleasure." It will also be observed, "That a jingle of words hath in some measure a ludicrous effect, witness the double rhymes of Hudibras, which contribute no small share to its drollery; that in a serious work this ludicrous effect would be equally remarkable, were it not obscured by the prevailing gravity of the subject; that having however a constant tendency to give a ludicrous air to the composition, more than ordinary fire is requisite to support the dignity of the sentiments against such an undermining antagonist.*

These

* Vossius, de poematum cantu, p. 26. says, "Nihil æque gravitati orationis officit, quam in fono ludere sylabarum."
These arguments are specious, and have undoubtedly some weight. Yet, on the other hand, it ought to be considered, that in modern tongues rhyme has become universal among men as well as children; and that it cannot have such a currency without some foundation in human nature. In fact, it has been successfully employed by poets of genius, in their serious and grave compositions, as well as in those which are more light and airy. Here, in weighing authority against argument, the scales seem to be upon a level; and therefore, to come at any thing decisive, we must pierce a little deeper.

Music has great power over the soul; and may successfully be employed to inflame or soothe passions, if not actually to raise them. A single sound, however sweet, is not music; but a single sound repeated after intervals, may have the effect to rouse attention, and to keep the hearer awake: and a variety of similar sounds, succeeding each other after regular intervals, must have a still stronger effect. This consideration is applicable to rhyme, which connects two verse-lines by making them close with two words similar in sound. And considering attentively the musical effect of a couplet, we find, that it rouses the mind, and produceth an emotion moderately gay without dignity or elevation: like the murmuring of a brook gliding through pebbles, it calms the mind when perturbed, and gently raises it when sunk. These effects are scarce perceived when the whole poem is in rhyme; but are extremely remarkable by contrast, in the couplets that close the several acts of our later tragedies: the tone of the mind is sensibly varied by them, from anguish, distress, or melancholy, to some degree of ease and alacrity. For the truth of this observation, I appeal to the speech of Jane Shore in the fourth act, when her doom was pronounced by Glo'iter; to the speech of Lady Jane Gray at the end of the first act; and to that of Calista, in the Fair Penitent, when she leaves the stage, about the middle of the third act. The speech of Alicia, at the close of the fourth act of Jane Shore, puts the matter beyond doubt: in a scene of deep distress, the rhymes which finish the act, produce a certain gaiety and cheerfulnes, far from according with the tone of the passion:

Alicia.
Alicia. For ever? Oh! For ever!
My rival too! his last thoughts hung on her:
And, as he parted, left a blessing for her.
Shall she be bless’d, and I be curs’d, for ever!
No; since her fatal beauty was the cause
Of all my sufferings, let her share my pains;
Let her, like me, of ev’ry joy forlorn,
Devote the hour when such a wretch was born:
Like me to deserts and to darkness run,
Abhor the day, and curse the golden sun;
Cast ev’ry good and ev’ry hope behind;
Detest the works of nature, loathe mankind:
Tear her poor bosom, rend her frantic hair,
And prove the tortments of the last despair.

Having described, the best way I can, the impression that rhyme makes on the mind; I proceed to examine whether there be any subjects to which rhyme is peculiarly adapted, and for what subjects it is improper. Grand and lofty subjects, which have a powerful influence, claim precedence in this inquiry. In the chapter of grandeur and sublimity it is established, that a grand or sublime object, inspires a warm enthusiastic emotion disdainful of strict regularity and order; which emotion is very different in its tone from that inspired by the moderately enlivening music of rhyme. Supposing then an elevated subject to be expressed in rhyme, what must be the effect? The intimate union of the music with the subject, produces an intimate union of their emotions; one inspired by the subject, which tends to elevate and expand the mind; and one inspired by the music, which, confining the mind within the narrow limits of regular cadency, and familiar sound, tends to prevent all elevation above its own pitch. Emotions so little concordant, cannot in union have a happy effect.

But it is scarce necessary to reason upon a case that never did, and probably never will happen, viz. an important subject clothed in rhyme, and yet supported in its utmost elevation. A happy thought or warm expression, may at times give a sudden bound upward; but it requires a genius greater than has hitherto existed,
ed, to support a poem of any length in a tone elevated much above that of the melody: Tasso and Ariosto ought not to be made exceptions, and still less Voltaire. And after all, where the poet has the dead weight of rhyme constantly to struggle with, how can we expect an uniform elevation in a high pitch; when such elevation, with all the support it can receive from language, requires the utmost effort of the human genius?

But now, admitting rhyme to be an unfit dress for grand and lofty images; it has one advantage however, which is, to raise a low subject to its own degree of elevation. Addison * observes, “That rhyme, without any other assistance, throws the language off from prose, and very often makes an indifferent phrase pass unregarded; but where the verse is not built upon rhymes, there, pomp of sound and energy of expression are indispensably necessary, to support the style, and keep it from falling into the flatness of prose.” This effect of rhyme is remarkable in the French verse, which, being simple, and in a good measure unqualified for inversion, readily sinks down to prose where not artificially supported: rhyme is therefore indispensable in the French tragedy, and may be proper even in their comedy. Voltaire † assigns that very reason for adhering to rhyme in these compositions. He indeed candidly owns, that, even with the support of rhyme, the tragedies of his country are little better than conversation pieces; which shows, that the French language is weak, and an improper dress for any grand subject. Voltaire was sensible of this imperfection; and yet Voltaire attempted an epic poem in that language.

The cheering and enlivening power of rhyme, is still more remarkable in poems of short lines, where the rhymes return upon the ear in a quick succession; and for that reason, rhyme is perfectly well adapted to gay, light, and airy subjects: witness the following.

O the pleasing, pleasing anguish.
When we love, and when we languish!

* Spectator, No 285.
† Preface to his OEdipus, and in his discourse upon tragedy, prefixed to the tragedy of Brutus.
Wishes rising,
Thoughts surprizing,
Pleasure courting,
Charms transporting,
Fancy viewing,
Joys ensuing,
O the pleasing, pleasing anguish!

Rosamond, a. i. sc. 2.

For that reason, such frequent rhymes are very improper for any severe or serious passion: the dissonance between the subject and the melody, is very sensibly felt; witness the following.

Ardito ti renda,
T'accenda
Di sdegno
D'un figlio
Il periglio
D'un regno
L'amor.
E'dolce ad un'alma
Che aspetta
Vendetta
Il perder la calma
Fra l'ine del cor.

Metastasio. Artaserse, a. 3. sc. 3.

Again:

Now under hanging mountains,
Beside the fall of fountains,
Or where Hebrus wanders,
Rolling in meanders,
All alone,
Unheard, unknown,
He makes his moan,
And calls her ghost,
For ever, ever, ever loit;
Now with furies surrounded,
Despairing, confounded,
He trembles, he glows,
Amidst Rhodope's snows.

Pope, Ode for Music, l. 97.

Rhyme is not less unfit for anguish or deep distress,
than for subjects elevated and lofty; and for that reason has been long diluted in the English and Italian tragedy. In a work where the subject is serious though not elevated, rhyme has not a good effect; because the airiness of the melody agrees not with the gravity of the subject: the Essay on Man, which treats a subject great and important, would show much better in blank verse. Sportive love, mirth, gaiety, humour, and ridicule, are the province of rhyme. The boundaries assigned it by nature, were extended in barbarous and illiterate ages, and in its usurpations it has long been protected by custom: but taste in the fine arts, as well as in morals, improves daily; and makes a progress toward perfection, now indeed but uniform; and there is no reason to doubt, that rhyme, in Britain, will in time be forc'd to abandon its unjust conquests, and to confine itself within its natural limits.

Having thrown out what occurred upon rhyme, I close the section with a general observation; That the melody of verse so powerfully enchants the mind, as to draw a veil over very gross faults and imperfections. Of this power a stronger example cannot be given than the episode of Aristeus, which closes the fourth book of the Georgics. To renew a flock of bees when the former is lost, Virgil afferts, that they will be produced in the entrails of a bullock, slain and managed in a certain manner. This leads him to say, how this strange receipt was invented; which is as follows. Aristeus having lost his bees by disease and famine, never dreams of employing the ordinary means for obtaining a new stock; but, like a sroward child, complains heavily to his mother Cyrene, a water-nymph. She advises him to consult Proteus, a sea-god, not how he was to obtain a new stock, but only by what fatality he had lost his former flock; adding, that violence was necessary, because Proteus would say nothing voluntarily. Aristeus, satisfied with this advice, though it gave him no prospect of repairing his loss, proceeds to execution. Proteus is catched sleeping, bound with cords, and compelled to speak. He declares, that Aristeus was punished with the loss of his bees, for attempting the chastity of Eurydice, the wife of Orpheus; she having been stung to death.
death by a serpent in flying his embraces. Proteus, whose fullness ought to have been converted into wrath by the rough treatment he met with, becomes on a sudden courteous and communicative. He gives the whole history of the expedition to hell which Orpheus undertook in order to recover his spouse; a very entertaining story, but without the least relation to the the affair on hand. Aristæus, returning to his mother, is advised to deprecate by sacrifices the wrath of Orpheus, who was now dead. A bullock is sacrificed, and out of the entrails spring miraculously a swarm of bees. Does it follow, that the same may be obtained without a miracle, as is supposed in the receipt?

A list of the different FEET, and of their NAMES.

1. Pyrrhichius, consists of two short syllables. Examples: Deus, given, cannot, hillock, running.
2. Spondeus, consists of two long syllables: omnes, possess, forewarn, mankind, sometime.
4. Trochæus, or Choræus, a long and a short: servat, whereby, after, legal, measure, burden, holy, lofty.
5. Tribacula, three short: melius, property.
7. Anapaestus, two short and a long: animos, descend, apprehend, overheard, acquiesce, immature, overcharge, serenade, opportune.
8. Dactylus, a long and two short: carmina, evident, excellence, estimate, wonderful, altitude, burdened, minister, tenement.
10. Hypobacchius, or Antibacchius, two long and a short: pelluntur.
11. Creticus, or Amphimaccer, a short syllable between two long: infito, afternoon.
12. Amphibrachys, a long syllable between two short: honore, consider, imprudent, procedure, attended,
tended, proposed, respondent, concurrence, apprentice, respective, revenue

15. Diambus, composed of two Iambi: severitas.
17. Ionicus, two short syllables and two long: properabant.
18. Another foot passes under the same name, composed of two long syllables and two short: calcaribus, possessory.
21. Pæon 1st, one long syllable and three short: temperibus, ordinary, inventory, temperament.
22. Pæon 2d, the second syllable long, and the other three short: rapidity, solemnity, minority, considered, imprudently, extravagantly, respectfully, accordingly.
23. Pæon 3d, the third syllable long and the other three short: animatus, independent, condescendence, sacerdotal, reimbursement, manufacture.
24. Pæon 4th, the last syllable long and the other three short: celeritas.
25. Epitritus 1st, the first syllable short and the other three long: voluptates.
26. Epitritus 2d, the second syllable short and the other three long: pænitentes.
27. Epitritus 3d, the third syllable short and the other three long: discordias.
28. Epitritus 4th, the last syllable short and the other three long: fortunatus.
29. A word of five syllables composed of a Pyrrhichius and Dactylus: ministerial.
30. A word of five syllables composed of a Trochæus and Dactylus: singularity.
31. A word
Comparisons.

Ch. XIX.

31. A word of five syllables composed of a Dactylus and Trochæus: precipitation, examination.

32. A word of five syllables, the second only long: significance.

33. A word of six syllables composed of two Dactyles: impetuosity.

34. A word of six syllables composed of a Tribrachys and Daëtyl: pusillanimity.

N. B. Every word may be considered as a prose foot, because every word is distinguished by a pause; and every foot in verse may be considered as a verse word, composed of syllables pronounced at once without a pause.

CHAP. XIX.

Comparisons. as observed above *, serve two purposes: when addressed to the understanding, their purpose is to instruct; when to the heart, their purpose is to please. Various means contribute to the latter: first, the suggesting some unusual resemblance or contrast; second, the setting an object in the strongest light; third, the associating an object with others that are agreeable; fourth, the elevating an object; and, fifth, the depressing it. And that comparisons may give pleasure by these various means, appears from what is said in the chapter above cited; and will be made still more evident by examples, which shall be given after premising some general observations.

Objects of different senses cannot be compared together; for such objects are totally separated from each other, and have no circumstance in common to admit either resemblance or contrast. Objects of hearing may be compared together, as also of taste, of smell, and of touch: but the chief fund of comparison are objects of sight; because, in writing or speaking, things can only be compared in idea, and the ideas of sight are more distinct and lively than those of any other sense.

When

* Chap. 8.
When a nation emerging out of barbarity begins to think of the fine arts, the beauties of language cannot long lie concealed; and when discovered, they are generally, by the force of novelty, carried beyond all bounds of moderation. Thus, in the early poems of every nation, we find metaphors and similes founded on slight and distant resemblances, which, losing their grace with their novelty, wear gradually out of repute; and now, by the improvement of taste, no metaphor nor simile is admitted into any polite composition but of the most striking kind. To illustrate this observation, a specimen shall be given afterward of such metaphors as I have been describing: with respect to similes take the following specimen.

Behold, thou art fair, my love: thy hair is as a flock of goats that appear from Mount Gilead: thy teeth are like a flock of sheep from the washing, every one bearing twins: thy lips are like a thread of scarlet: thy neck like the tower of David built for an armoury, whereon hang a thousand shields of mighty men: thy two breasts like two young roes that are twins, which feed among the lilies: thy eyes like the fish-pools in Hezbon, by the gate of Bash-rabbin: thy nose like the tower of Lebanon, looking toward Damascus. Song of Solomon.

Thou art like snow on the heath; thy hair like the milt of Cromla, when it curls on the rocks and shines to the beam of the west: thy breasts are like two smooth rocks seen from Branno of the streams: thy arms like two white pillars in the hall of the mighty Fingal.

It has no good effect to compare things by way of simile that are of the same kind; nor to compare by contrast things of different kinds. The reason is given in the chapter cited above; and the reason shall be illustrated by examples. The first is a comparison built upon a resemblance so obvious as to make little or no impression.

This just rebuke inflam'd the Lycian crew,
They join, they thicken, and th'assault renew;
Unmov'd th'embod'y'd Greeks their fury dare,
And fix'd support the weight of all the war;
Nor could the Greeks repel the Lycian pow'rs,  
Nor the bold Lycians force the Grecian tow'rs.  
As on the confines of adjoining grounds,  
Two stubborn swains with blows dispute their bounds;  
They tugg, they sweat; but neither gain, nor yield,  
One foot, one inch, of the contended field:  
Thus obstinate to death, they fight, they fall;  
Nor these can keep, nor those can win the wall.  

Iliad xii. 505.

Another, from Milton, lies open to the same objection.  
Speaking of the fallen angels searching for mines of gold:

A numerous brigade hasten'd; as when bands  
Of pioncers with spade and pick-ax arm'd,  
Forerun the royal camp to trench a field  
Or cast a rampart.  

The next shall be of things contrasted that are of 
different kinds.

*Queen.* What, is my Richard both in shape and mind  
Transform'd and weak? Hath Bolingbroke depos'd  
Thine intellect? Hath he been in thy heart!  
The lion, dying, thruseth forth his paw,  
And wounds the earth, if nothing else, with rage  
To be o'erpower'd: and wilt thou, pupil-like,  
Take thy correction mildly, kifs the rod,  
And fawn on rage with base humility?  

Richard II. a5 5. sc. 1.

This comparison has scarce any force: a man and a li-
on are of different species, and therefore are proper sub-
jects for a simile; but there is no such resemblance be-
tween them in general, as to produce any strong effect 
by contrasting particular attributes or circumstances.

A third general observation is, That abstract terms 
can never be the subject of comparison, otherwise than 
by being personified. Shakespear compares adversity to 
a toad, and flander to the bite of a crocodile; but in 
such comparisons these abstract terms must be imagined 
flexible beings.

To have a just notion of comparisons, they must be 
distinguished into two kinds; one common and familiar, 
as where a man is compared to a lion in courage, or to 
a horse in speed; the other more distant and refined, where
where two things that have in themselves no resemblance or opposition, are compared with respect to their effects. This sort of comparison is occasionally explained above*; and for further explanation take what follows. There is no resemblance between a flower-plot and a cheerful song; and yet they may be compared with respect to their effects, the emotions they produce in the mind being extremely similar. There is as little resemblance between fraternal concord and precious ointment; and yet observe how successfully they are compared with respect to the impressions they make.

Behold, how good and how pleasant it is for brethren to dwell together in unity. It is like the precious ointment upon the head, that ran down upon Aaron's beard, and descended to the skirts of his garment. *Psalms* 133.

For illustrating this sort of comparison, I add some more examples:

Delightful is thy presence, O Fingal! it is like the sun on Cromla, when the hunter mourns his absence for a season, and sees him between the clouds.

Did not Ossian hear a voice? or is it the sound of days that are no more? Often, like the evening-sun, comes the memory of former times on my soul.

His countenance is settled from war; and is calm as the evening beam, that from the cloud of the west looks on Cona's silent vale.

Sorrow, like a cloud on the sun, shades the soul of Clefhamnor.

The music was like the memory of joys that are past, pleasant and mournful to the soul.

Pleasant are the words of the song, said Cuchullin, and lovely are the tales of other times. They are like the calm dew of the morning on the hill of roes, when the sun is faint on its side, and the lake is settled and blue in the vale.

These quotations are from the poems of Ossian, who abounds with comparisons of this delicate kind, and appears singularly happy in them†.

* * p. 86.
† The nature and merit of Ossian's comparisons is fully illustrated, in a dissertation on the poems of that author, by Dr Blair, professor of rhetoric in the college of Edinburgh; a delicious morsel of criticism.
I proceed to illustrate by particular instances the different means by which comparisons, whether of the one sort or the other, can afford pleasure; and, in the order above established, I begin with such instances as are agreeable, by suggesting some unusual resemblance or contrast:

Sweet are the uses of Adversity,
Which, like the toad, ugly and venemous,
Wears yet a precious jewel in her head.

As you like it, act 2. sc. 1.

Gardiner. Bolingbroke hath feiz’d the wasteful King.
What pity is’t that he had not so trimm’d
And dres’d his land, as we this garden dress,
And wound the bark, the skin of our fruit-trees;
Left, being over proud with sap and blood,
With too much riches it confound itself.

Had he done so to great and growing men,
They might have liv’d to bear, and he to taste
Their fruits of duty. All superfluous branches
We lop away, that bearing boughs may live:
Had he done so, himself had borne the crown,
Which waste and idle hours have quite thrown down.

Richard II. act 3. sc. 7.

See, how the Morning opes her golden gates,
And takes her farewell of the glorious Sun;
How well resembles it the prime of youth,
Trimm’d like a yonker prancing to his love.

Second part, Henry VI. act 2. sc. 1.

Brutus. O Cassius, you are yoked with a lamb,
That carries anger as the flint bears fire:
Who, much inforced, shows a hafty spark,
And straitly is cold again. [Julius Cæsar, act 4. sc. 3.

Thus they their doubtful consultations dark
Ended, rejoicing in their matchless chief:
As when from mountain tops, the dusky clouds
Ascending, while the North wind sleeps, o’erspread
Heav’n’s cheerful face, the low’ring element
Scowis o’er the darken’d landscape, snow, and shower;
If chance the radiant Sun with farewell sweet
Extends his ev’ning-beam, the fields revive,
The birds their notes renew, and bleating herds

At the
Attest their joy, that hill and valley rings.

As the bright stars, and milky way,
Shew'd by the night, are hid by day:
So we in that accomplish'd mind,
Help'd by the night, new graces find,
Which, by the splendor of her view,
Dazzled before, we never knew.

The last exertion of courage compared to the blaze
of a lamp before extinguishing, *Tasso Gierusalemme,*
_anto 19. _ft _22._

None of the foregoing similes, as they appear to me,
tend to illustrate the principal subject: and therefore
the pleasure they afford must arise from suggesting re-
semblances that are not obvious: I mean the chief plea-
sure; for undoubtedly a beautiful subject introduced to
form the simile affords a separate pleasure, which is felt
in the similes mentioned, particularly in that cited from
Milton.

The next effect of a comparison in the order men-
tioned, is to place an object in a strong point of view;
which effect is remarkable in the following similes.

As when two scales are charg'd with doubtful loads,
From side to side the trembling balance nods,
(While some laborious matter, just and poor,
With nice exactness weighs her woolly store,)  
Till poise'd aloft, the refting beam suspends
Each equal weight; nor this nor that descends:
So flood the war, till Hector's matchless might,
With fates prevailing, turn'd the scale of fight.
Fierce as a whirlwind up the wall he flies,
And fires his hoft with loud repeated cries.

_Hiad, _b. _xii. _521._

Ut fios in septis secretis nascitur hortis,
Ignotus pecori, nullo contusus aratro,
Quem mulcent aure, firmat fol, educat imber,
Multi illum pueri, multæ cupiere puellæ;
Idem, cum tenni carptus desfloruit ungui,
Nulli illum pueri, nullæ cupiere puellæ:
Sic virgo, dum intaèta manet, dum cara suis; sed
Cum caflum amist, pollutio corpore, florem,

Nec
Nec pueris jucunda manet, nec cara puellis. [Catullus.
The imitation of this beautiful simile by Ariosto, canto 1. t. 42 falls short of the original. It is also in part imitated by Pope *.

Lucetta. I do not seek to quench your love’s hot fire, But qualify the fire’s extreme rage, Left it should burn above the bounds of reason.
Julia. The more thou damni’d it up, the more it burns:
The current, that with gentle murmur glides, Thou know’st, being stopp’d, impatiently doth rage; But when his fair course is not hindered, He makes sweet music with th’enamel’d stones, Giving a gentle kiss to every sedge He overtaketh in his pilgrimage, And so by many winding nooks he strays With willing sport, to the wild ocean. Then let me go, and hinder not my course; I’ll be as patient as a gentle stream, And make a pastime of each weary step Till the last step have brought me to my love; And there I’ll rest, as, after much turmoil, A blessed soul doth in Elysium.

Two Gentlemen of Verona, ad 2 fe 10.

—She never told her love, But let concealment, like a worm i’ th’ bud, Feed on her damask cheek: she pin’d in thought; And with a green and yellow melancholy, She sat like Patience on a monument, Smiling at Grief. [Twelfth Night, ad 2. fe. 6.

York. Then, as I said, the Duke, great Bolingbroke, Mounted upon a hot and fiery Heed, Which his aspiring rider seem’d to know, With slow but stately pace, kept on his course: While all tongues cry’d, God save thee, Bolingbroke.

Duchess. Alas! poor Richard, where rides he the while!

York. As in a theatre, the eyes of men, After a well-grac’d actor leaves the stage,
Are idly bent on him that enters next,
Thinking his prattle to be tedious:
Even so, or with much more contempt, men's eyes
Did scowl on Richard; no man cry'd, God save him!
No joyful tongue gave him his welcome home;
But dust was thrown upon his sacred head;
Which with such gentle sorrow he shook off,
His face still combating with tears and smiles,
The badges of his grief and patience;
That had not God, for some strong purpose, feel'd
The hearts of men, they must perforce have melted;
And barbarism itself have pitied him.

Richard II. act 5. sc. 3.

Northumberland. How doth my son and brother?
Thou tremblest, and the whiteness in thy cheek
Is apter than thy tongue to tell thy errand.

Even such a man, so faint, so spiritless,
So dull, so dead in look, so wo-be-gone,
Drew Priam's curtain in the dead of night,
And would have told him, half his Troy was burn'd;
But Priam found the fire, ere he his tongue:
And I my Piercy's death, ere thou report it it.

Second part, Henry IV. act 1. sc. 3.

Why, then I do but dream on fov'reignty,
Like one that stands upon a promontory,
And spies a far-off shore where he would tread,
Wishing his foot were equal with his eye,
And chides the sea that hinders him from thence,
Saying, he'll love it dry to have his way:
So do I wish, the crown being so far off,
And so I chide the means that keep me from it,
And so (I say) I'll cut the causes off,
Flat'ting my mind with things impossible.

Third part, Henry VI. act 3. sc. 3.

Out, out, brief candle!
Life's but a walking shadow, a poor player,
That struts and frets his hour upon the stage,
And then is heard no more. [Macbeth, act 5. sc. 5.

O thou Goddes,
Thou divine Nature! how thyself thou blazon'lt
In these two princely boys! they are as gentle
As zephyrs blowing below the violet,
Not wagging his sweet head; and yet as rough,
(Their royal blood inchant'd) as the rud'ft wind,
That by the top doth take the mountain-pine,
And make him ftoop to th' vale.

Cymbeline, act 4. fc. 4.

Why did not I pass away in secret, like the flower
of the rock that lifts its fair head unseen, and ftrows its wi-
thered leaves on the blast?

There is a joy in grief when peace dwells with the
forrowful. But they are wafted with mourning, O
daughter of Tofcar, and their days are few. They fall
away like the flower on which the sun looks in his
frength, after the mildew has passed over it, and its
head is heavy with the drops of night.

The fight obtained of the city of Jerusalem by the
Chriftian army, compared to that of land discovered af-
ter a long voyage, Taffo's Gierufalem, canto 3. ft. 4.
The fury of Rinaldo subsiding when not oppofed, to
that of wind or water when it has a free paffage, canto
20. ft. 58.

As words convey but a faint and obscure notion of
great numbers, a poet, to give a lively notion of the
object he describes with regard to number, does well
to compare it to what is familiar and commonly known.
Thus Homer * compares the Grecian army in point of
number to a swarm of bees: in another paffage † he
compares it to that profufion of leaves and flowers which
appear in the fpring, or of insects in a fummer's even-
ing: and Milton,

As when the potent rod
Of Amram's fon in Egypt's evil day
Wav'd round the coaft, up call'd a pitchy cloud
Of locufts, warping on the eastern wind,
That o'er the realm of impious Pharaoh hung
Like night, and darken'd all the land of Nile:
So numberlefs were those bad angels feen,
Hovering on wing under the cope of hell,
'Twixt upper, nether, and surrounding fires.

Paradife loft, book 1.

* Book 2. l. 111.
† Book 2. l. 551.
Such comparisons have, by some writers, been condemned for the lowness of the images introduced: but surely without reason; for, with regard to numbers, they put the principal subject in a strong light.

The foregoing comparisons operate by resemblance; others have the same effect by contrast.

_York._ I am the last of Noble Edward's sons,
Of whom, thy father, Prince of Wales, was first:
In war, was never lion rag'd more fierce;
In peace, was never gentle lamb more mild
Than was that young and princely gentleman?
His face thou hast, for even so look'd he,
Accomplish'd with the number of thy hours.
But when he frown'd, it was against the French,
And not against his friends. His noble hand
Did win what he did spend; and spent not that
Which his triumphant father's hand had won.
His hands were guilty of no kindred's blood,
But bloody with the enemies of his kin.

Oh, Richard! York is too far gone with grief,
Or else he never would compare between.

_Milton, b. i._

Thus
Thus far these, beyond
Compare of mortal prowess, yet observ'd
Their dread commander. He, above the rest
In shape and gesture proudly eminent,
Stood like a tow'r; his form had yet not lost
All her original brightness, nor appear'd
Less than archangel ruin'd, and th' excess
Of glory obscur'd; as when the sun new-risen
Looks through the horizontal misty air
Shorn of his beams; or from behind the moon
In dim eclipse, disastrous twilight sheds
On half the nations, and with fear of change
Perplexes monarchs.

Milton, b. 1.

As when a vulture on Imaus bred,
Whose snowy ridge the roving Tartar bounds,
Dislodging from a region scarce of prey
To gorge the flesh of lambs, or yearling kids,
On hills where flocks are fed, flies toward the springs
Of Ganges or Hydaspes, Indian streams,
But in his way lights on the barren plains
Of Sericana, where Chineses drive
With sails and wind their cany waggons light:
So on this windy sea of land, the fiend
Walk'd up and down alone, bent on his prey.

Milton, b. 1.

Yet higher than their tops
The verdurous wall of Paradise up sprung:
Which to our general fire gave prospect large
Into this nether empire neighbouring round.
And higher than that wall, a circling row
Of goodliest trees loaden with fairest fruit,
Blossoms and fruits at once of golden hue,
Appeard, with gay enam'ld colours mix'd,
On which the sun more glad impress'd his beams
Than in fair evening cloud, or humid bow,
When God hath show'r'd the earth; so lovely seem'd
That landscape: and of pure nowputer air
Meets his approach, and to the heart inspires
Vernal delight and joy, able to drive
All sadness but despair: now gentle gales
Flauning their odourous wings dispense
Native perfumes, and whisper whence they stole

These
Those balmy spoils. As when to them who fail
Beyond the Cape of Hope, and now are past
Mozambique, off at sea north-east winds blow
Sabean odour from the spicy shore
Of Arabia the blest: with such delay
Well-pleas’d they flack their course, and many a league,
Chear’d with the grateful smell, old Ocean smiles.

Milton, b. 4.

With regard to similes of this kind, it will readily occur to the reader, that when a resembling subject is once properly introduced in a simile, the mind is transitorily amused with the new object, and is not dissatisfied with the slight interruption. Thus, in fine weather, the momentary excursions of a traveller for agreeable prospects or elegant buildings, cheer his mind, relieve him from the languor of uniformity, and without much lengthening his journey in reality, shorten it greatly in appearance.

Next, of comparisons that aggrandize or elevate. These affect us more than any other sort: the reason of which may be gathered from the chapter of grandeur and sublimity; and, without reasoning, will be evident from the following instances.

As when a flame the winding valley fills,
And runs on crackling shrubs between the hills,
Then o’er the stubble up the mountain flies,
Fires the high woods, and blazes to the skies,
This way and that, the spreading torrent roars;
So sweeps the hero through the wafted shores.
Around him wide, immense destruction pours,
And earth is delug’d with the languine flows,

Iliad xx. 569.

Through blood, through death, Achilles still proceeds,
O’er slaughter’d heroes, and o’er rolling streams.
As when avenging flames with fury driv’n
On guilty towns exert the wrath of Heav’n,
The pale inhabitants, some fall, some fly,
And the red vapours purple all the sky:
So rag’d Achilles; Death, and dire dismay,
And toils, and terrors, fill’d the dreadfull day:

Iliad xxi. 605.

Methinks,
Methinks, King Richard and myself should meet
With no less terror than the elements
Of fire and water, when their thund'ring shock,
At meeting tears the cloudy cheeks of heav'n.

As rusheth a foamy stream from the dark shady steep
of Cromla, when thunder is rolling above, and dark brown night rests on the hill: so fierce, so vast, so terrible, rush forward the sons of Erin. The chief, like a whale of Ocean followed by all its billows, pours valour forth as a stream, rolling its might along the shore.

I beg peculiar attention to the following simile, for a reason that shall be mentioned:

Thus breathing death, in terrible array,
The close compacted legions urg'd their way:
Fierce they drove on, impatient to destroy;
Troy charg'd they first, and Hector first of Troy.
As from some mountain's craggy forehead torn,
A rock's round fragment flies with fury borne,
(Which from the stubborn stone a torrent tends)
Precipitate the pond'rous mass descends:
From steep to steep the rolling ruin bounds:
At every shock the crackling wood resounds;
Still gath'ring force, it smokes; and, urg'd amain,
Whirls, leaps, and thunders down, impetuous to the plain:
'There stops—So Hector. Their whole force he prov'd,
Resistless when he rag'd; and when he stop't, unmov'd.

The image of a falling rock is certainly not elevating *
and yet undoubtedly the foregoing simile fires and swells the mind: it is grand therefore, if not sublime. And the following simile will afford additional evidence, that there is a real, though nice, distinction between these two feelings:
So saying, a noble stroke he lifted high,
Which hung not, but so swift with tempest fell
On the proud crest of Satan, that no fight,
Nor motion of swift thought, less could his shield
Such ruin intercept. Ten paces huge
He back recoil'd; the tenth on bended knee
His massy spear upflaid; as if on earth
Winds under ground or waters forcing way,
Sidelong had push'd a mountain from his feat
Half-funk with all his pines. Milton, b. 6.

A comparison by contrast may contribute to grandeur or elevation, not less than by resemblance; of which the following comparison of Lucan is a remarkable instance:

Victrix causa diis placuit, sed victa Catoni.

Considering that the Heathen deities possessed a rank but one degree above that of mankind, I think it would not be easy to exalt more, by a single expression, one of the human species, than is done by this comparison. I am sensible, at the same time, that such a comparison among Christians, who entertain more exalted notions of the Deity, would justly be reckoned extravagant and absurd.

The last article mentioned, is that of lessening or depressing a hated or disagreeable object; which is effectually done by resembling it to any thing low or despisable. Thus Milton, in his description of the rout of the rebel-angels, happily expresses their terror and dismay in the following simile:

As a herd
Of goats or timorous flock together throng'd,
Drove them before him thunder-struck, pursu'd
With terrors and with furies to the bounds
And crystal wall of heav'n, which op'ning wide,
Rowl'd inward, and a spacious gap disclos'd
Into the wasteful deep; the monstrous fight
Strook them with horror backward, but far worse
Urg'd them behind; headlong themselves they threw
Down from the verge of heav'n. Milton, b. 6.

In the same view, Homer, I think, may be justified in comparing the shouts of the Trojans in battle, to the
Comparisons.

Ch. XIX.

noise of cranes *, and to the bleating of a flock of sheep †: it is no objection, that these are low images; for it was his intention to lessen the Trojans by opposing their noisy march to the silent and manly march of the Greeks. Addison ‡, describing the figure that men make in the sight of a superior being, takes opportunity to mortify their pride by comparing them to a swarm of pilgries.

A comparison that has none of the good effects mentioned in this discourse, but is built upon common and trifling circumstances, makes a mighty silly figure:

Non sum nescius, grandia consilia a multis plerumque causis, ceu magna navigia a plurimis remis, impelli.

Stradá de bello Belgico.

By this time, I imagine, the different purposes of comparison, and the various impressions it makes on the mind, are sufficiently illustrated by proper examples. This was an easy work. It is more difficult to lay down rules about the propriety or impropriety of comparisons; in what circumstances they may be introduced, and in what circumstances they are out of place. It is evident, that a comparison is not proper upon every occasion: a man when cool and sedate, is not disposed to poetical flights, nor to sacrifice truth and reality to the delusive operations of the imagination: far less is he so disposed, when oppressed with care, or interested in some important transaction that occupies him totally. On the other hand, it is observable, that a man, when elevated or animated by any passion, is disposed to elevate or animate all his objects: he avoids familiar names, exalts objects by circumlocution and metaphor, and gives even life and voluntary action to inanimate beings. In this warmth of mind, the highest poetical flights are indulged, and the boldest similes and metaphors relished §. But without soaring so high, the mind is frequently

* Beginning of book 3.
† Book 4. l. 498.
‡ Guardian, No 153.
§ It is accordingly observed by Longinus, in his treatise of the Sublime, that the proper time for metaphor, is when the passions are so swelled as to hurry on like a torrent.
Ch. XIX. **Comparisons.**

Subsequently in a tone to relish chaste and moderate ornament; such as comparisons that set the principal object in a strong point of view, or that embellish and diversify the narration. In general, when by any animating passion, whether pleasant or painful, an impulse is given to the imagination; we are in that condition disposed to every sort of figurative expression, and in particular to comparisons. This in a great measure is evident from the comparisons already mentioned; and shall be further illustrated by other instances. Love, for example, in its infancy, rousing the imagination, prompts the heart to display itself in figurative language, and in similes:

*Troilus.* Tell me, Apollo, for thy Daphne's love, What Creffid is, what Pandar, and what we? Her bed is India, there she lies, a pearl: Between our Ilium, and where she resides, Let it be call'd the wild and wandering flood; Ourselves the merchant, and this failing Pandar Our doubtful hope, our convoy, and our bark. *Troilus and Cressida, act 1. sc. 7.*

Again:

Come, gentle Night; come, loving black-brow'd Night! Give me my Romeo; and, when he shall die, Take him, and cut him out in little stars, And he will make the face of Heav'n so fine, That all the world shall be in love with Night, And pay no worship to the garish Sun. *Romeo and Juliet, act 3. sc. 4.*

The dread of a misfortune, however imminent, involving always some doubt and uncertainty, agitates the mind, and excites the imagination:

*Wolsey.* Nay, then, farewell; I've touch'd the highest point of all my greatness. And from that full meridian of my glory I haste now to my setting. I shall fall, Like a bright exhalation in the evening, And no man see me more. *Henry VIII. act 3. sc. 4.*

But it will be a better illustration of the present head, to give examples where comparisons are improperly introduced. I have had already occasion to observe, that similes are not the language of a man in his ordinary state.
state of mind, dispatching his daily and usual work: for that reason, the following speech of a gardener to his servants, is extremely improper:

Go, bind thou up yon dangling apricocks, Which, like unruly children, make their fire Stoop with oppression of their prodigal weight: Give some supportance to the bending twigs. Go thou, and, like an executioner, Cut off the heads of too-fast-growing sprays, That look too lofty in our commonwealth: All must be even in our government.

*Richard II.* act 3. sc. 7.

The fertility of Shakespear's vein betrays him frequently into this error. There is the same impropriety in another simile of his:

*Hero.* Good Margaret, run thee into the parlour; There shalt thou find my cousin Beatrice; Whisper her ear, and tell her, I and Ursula Walk in the orchard, and our whole discourse Is all of her; say, that thou overheardst us: And bid her steal into the pleached bower, Where honeysuckles, ripen'd by the sun, Forbid the sun to enter; like to favourites, Made proud by princes, that advance their pride Against that power that bred it.

*Much ado about nothing,* act 3. sc. 1.

Rooted grief, deep anguish, terror, remorse, despair, and all the severe dispiriting passions, are declared enemies, perhaps not to figurative language in general, but undoubtedly to the pomp and solemnity of comparison. Upon that account, the simile pronounced by young Rutland, under terror of death from an inveterate enemy, and praying mercy, is unnatural:

So looks the pent up lion o'er the wretch That trembles under his devouring paws; And so he walks insulting o'er his prey, And so he comes to rend his limbs asunder. Ah, gentle Clifford, kill me with thy sword, And not with such a cruel threatening look.

*Third part, Henry VI.* act 1. sc. 5.

Nothing
Ch. XIX.  COMPARISONS.  133

Nothing appears more out of place, nor more awkwardly introduced, than the following simile:

Lucia. ———— Farewel, my Portius,
Farewel, though death is in the word, for ever.

Portius. Stay, Lucia, stay; what dost thou stay? for ever?

Lucia. Have I not sworn? If, Portius, thy success
Must throw thy brother on his fate, farewell,
Oh, how shall I repeat the word, for ever!

Portius Thus, o'er the dying lamp th' unsteady flame
Hangs quivering on a point, leaps off by fits,
And falls again, as loath to quit its hold.
—Thou must not go, my soul still hovers o'er thee,
And can't get loose.  Cato, act 3. sc. 2.

Nor doth the simile which closes the first act of the same tragedy, make a better appearance; the situation there represented being too dispiriting for a simile. A simile is improper for one who dreads the discovery of a secret machination:

Zara. The mute not yet return'd! Ha! 'twas the King.
The King that parted hence! frowning he went;
His eyes like meteors roll'd, then darted down
Their red and angry beams; as if his sight
Would, like the raging Dog star, scorch the earth,
And kindle ruin in its course.

Mourning Bride, act 5. sc. 3.

A man spent and dispirited after losing a battle, is not disposed to heighten or illustrate his discourse by similes:

York. With this we charg'd again; but out, alas!
We bodg'd again; as I have seen a swan
With bootless labour swim against the tide,
And spend her strength with over-matching waves.
Ah! hark, the fatal followers do pursuе;
And I am faint and cannot fly their fury.
The sands are number'd that make up my life;
Here must I stay, and here my life must end.

Third part, Henry VI. act 1. sc. 6.

Far less is a man disposed to similes who is not only defeated in a pitch'd battle, but lies at the point of death mortally wounded:

Warwick.
Warwick. ——— My mangled body shows,
My blood, my want of strength, my sick heart shows,
That I must yield my body to the earth,
And, by my fall, the conquest to my foe.
Thus yields the cedar to the ax’s edge,
Whose arms gave shelter to the princely eagle;
Under whose shade the ramping lion slept,
Whose top-branch overpeer’d Jove’s spreading tree;
And kept low shrubs from winter’s pow’rful wind.

Third part, Henry VI. act 5. sc. 6.

Queen Katharine, deserted by the King, and in the
deepest affliction upon her divorce, could not be dispo-
ted to any fallies of imagination: and for that reason,
the following simile, however beautiful in the mouth of
a spectator, is scarce proper in her own:

I am the most unhappy woman living,
Shipwreck’d upon a kingdom, where no pity,
No friends, no hope! no kindred weep for me!
Almost no grave allow’d me! like the lily,
That once was mistress of the field, and flourish’d,
I’ll hang my head, and perish.

King Henry VIII. act 3. sc. 1.

Similes thus unseasonably introduced, are finely ridi-
culed in the Rehearsal.

Bayes. Now here she must make a simile.
Smith. Where’s the necessity of that, Mr Bayes?
Bayes. Because she’s surprized; that’s a general rule;
you must ever make a simile when you are surprized; ’tis
a new way of writing.

A comparison is not always faultless even where it is
properly introduced. I have endeavoured above to give
generally view of the different ends to which a compa-
rison may contribute: a comparison, like other human
productions, may fall short of its end; of which defect
instances are not rare even among good writers; and to
complete the present subject, it will be necessary to make
some observations upon such faulty comparisons. I be-
gin with observing, that nothing can be more erroneous
than to institute a comparison too faint: a distant resem-
blance or contrast fatigues the mind with its obscurity,
instead of amusing it; and tends not to fulfil any one
end of a comparison. The following similes seem to labour under this defect.

Albus ut obscuro deterget nobila cælo
Sæpe Notus, neque partirit imbres
Perpetuos: sic tu sapiens finire memento
Tristitiam, vitaeque labores,

Medio dux agmine Turnus
Vertitur arma tenens, et toto vertice supra est
Ceu septem furgens fedatis annibus altus
Per tacitum Ganges: aut pingui flumine Nilus.
Cum refluat campis, et jam fe condidit alveo.

Æneid. ix. 28.

Talibus orabat, talesque miserrima fletus
Fertque refertque foror: sed nullus ille movetur
Fletibus, aut voces ullass tradabilis audit.
Fata obstant: placidasque viri Deus obstruit aures.
Ac veluti anno sol idam cum robore quercum
Alpini Boreæ, nunc hinc, nunc flatibus illinc
Erure inter fe certant; it frigidor, et alte
Conflernunt terram concusso flipite frondes:
Ipfa hæret scopulis: et quantum vertice ad auras
Æthereas, tantum radice in Tartara tendit.
Haud fecus affiduis hinc atque hinc vocibus heros
\[\text{Tunditur, et magno perfentit peftore curas:}\
\[\text{Mens immota manet, lacrymæ volvuntur inanes.}\

Æneid, iv. 437.

K. Rich. Give me the crown.—Here, Cousin, seized
the crown,
Here, on this side, my hand; on that side, thine.
Now is this golden crown like a deep well,
That owes two buckets, filling one another;
The emptier ever dancing in the air,
The other down, unseen and full of water;
That bucket down, and full of tears, am I,
Drinking my griefs, whilst you mount up on high.

Richard ii. act 4. sc. 3.

King John. Oh! Cousin, thou art come to let mine
eye;
The tackle of my heart is crack’d and burnt:
And all the shrowds wherewith my life should fail,
Comparisons.

Are turned to one thread, one little hair:
My heart hath one poor string to stay it by,
Which holds but till thy news be uttered.

King John, act 5. sc. 10.

York. My uncles both are slain in rescuing me:
And all my followers, to the eager foe
Turn back, and fly like ships before the wind,
Or lambs pursu’d by hunger-starved wolves.

Third part, Henry VI. act 1. sc. 6.

The latter of the two similes is good: the former, because of the faintness of the resemblance, produces no good effect, and crowds the narration with an useless image.

The next error I shall mention is a capital one. In an epic poem, or in any elevated subject, a writer ought to avoid raising a simile upon a low image, which never fails to bring down the principal subject. In general, it is a rule, That a grand object ought never to be resembled to one that is diminutive, however delicate the resemblance may be: for it is the peculiar character of a grand object to fix the attention, and swell the mind; in which state, it is disagreeable to contract the mind to a minute object, however elegant. The resembling an object to one that is greater, has, on the contrary, a good effect, by raising or swelling the mind: for one passes with satisfaction from a small to a great object; but cannot be drawn down, without reluctance, from great to small. Hence the following similes are faulty.

Meanwhile the troops beneath Patroclus’ care,
Invade the Trojans, and commence the war.
As wasps, provok’d by children in their play,
Pour from their mansions by the broad highway,
In swarms the guiltless traveller engage,
Whet all their stings, and call forth all their rage;
All rise in arms, and with a general cry
Affert their waxen domes, and buzzing progeny:
Thus from the tents the fervent legion swarms,
So loud their clamours, and so keen their arms.

Iliad xvi. 312.

So burns the vengeful hornet (soul all o’er)
Repuls’d in vain, and thirsty still of gore.

(Bold
(Bold son of air and heat) on angry wings
Untam'd, untir'd, he turns, attacks and slings.
Fir'd with like ardour fierce Atrides flew,
And sent his foul with ev'ry lance he threw.

*Iliad* xvii. 642.

Infant ardentes Tyrri: pars ducere muros,  
Molirique arcem, et manibus subvolvere saxa;  
Pars aptare locum, teço, et conclудere fulco  
Jura magistratusque legunt, sanctunque senatum,  
Hic portus alii effodient: hic alta theatris  
Fundamenta locant alii, immaneque columnas  
Rupibus excidunt, scenis decora alta futuris.  
Qualis apis æquate nova, per florea rura  
Exercet sub sole labor, cum gentis adultos  
Educunt focus, aut cum liquentia mella  
Stipant, et dulci diffendunt nectarce cellas,  
Aut onera accipiant venientum, aut agmine fabo  
Ignavum fucps pecus a præsepibus arcent.  
Fervet opus, redolentque thymo fragrantia mella.  

*Aeneid.* i. 427.

To describe bees gathering honey as resembling the builders of Carthage, would have a much better effect*.  
'Tum vero Teucri incumbunt, et littore cellas  
Deducunt toto naves: natat unēta carina;  
Frondentesque ferunt remos, et robora sylvis  
Infabricata, fugæ studio.  
Migrantes cernas, totaque ex urbe ruentes,  
Ac veluti ingentem formicæ farris acervum  
Cum populant, hyemis memores, testoque reponunt:  
It nigrum campis agmen, praedanque per herbas  
Conve{lant calle angusto: pars grandia trudunt  
Obnixa frumenta humeris: pars aqūna cogunt,  
Castigantque moras: opere omnis fēmita fervet.  

*Aeneid.* iv. 397.

The following simile has not any one beauty to recommend it. The subject is Amata, the wife of King Latinus.

* And accordingly Demetrius Phalereus (of Elocution, sect. 85.) observes, that it has a better effect to compare small things to great than great things to small.
Comparisons.

Ch. XIX.

Turn vero infelix, ingentibus excita monstris, Immenfam fine more fuit, lymphata per urbem: Ceu quondam torto volitans sub verbere turblo, Quem pueri magno in gyro vacua atria circum Intenti ludo exercerit. Ille actus habem Curvatis fertur spatii: stupet incia turba, Impubesque manus, mirata volubile buxum; Dant animos plagae Non curfu feginor illo Per medias urbes agitur, populofque feroces.

Ænied. vii. 376.

This simile seems to border upon the burlesque.

An error opposite to the former, is the introducing a resembling image, so elevated or great as to bear no proportion to the principal subject. Their remarkable disparity, being the most striking circumstance, seizes the mind, and never fails to depress the principal subject by contrast, instead of raising it by resemblance: and if the disparity be very great, the simile takes on an air of burlesque; nothing being more ridiculous than to force an object out of its proper rank in nature, by equalling it with one greatly superior or greatly inferior. This will be evident from the following comparifons.

Georgic. iv. 169.

* The Cyclops make a better figure in the following simile:

Thec
Ch. XIX. Comparisons.

Tum Bitian ardentem oculis animisque fiementem; Non jaculo, neque enim jaculo vitam ille dedisset; Sed magnum stribens contorta falarica venit Fulminis acta modo, quam nec duo taurea terga, Nec duplci squama loric §idelis et auro Subituit: collapsa ruunt imania membra: Del tellus gemitum, et elypeum super intonat ingen: Quails in Euboico Baiorum littore quondam Saeve pila cedit, magnis quam molibus ante Constructam jacenti ponto: sic illa ruinam Prone tradit, penitusque vadis illiia recumbit: Mifcent si maria, et nigra attolluntur arenæ: Tum sonitu Prochyta alta tremit, durumque cubile Inarime Jovis imperii imposfa Typhoeo. 

Æneid. ix. 703.

Loud as a bull makes hill and valley ring, So roar’d the lock when it releas’d the spring.

Odyssey, xxi. 51.

Such a simile upon the simplest of all actions, that of opening a door, is pure burlesque.

A writer of delicacy will avoid drawing his comparisons from any image that is nauseous, ugly, or remarkably disagreeable; for however strong the resemblance may be, more will be lost than gained by such comparison. Therefore I cannot help condemning, though with some reluctance, the following simile, or rather metaphor.

O thou —— The Thracian leader press,
With eager courage, far before the rest; Him Ajax met, inflam’d with equal rage; Between the wond’ring hosts the chiefs engage; Their weighty weapons round their heads they throw; And swift, and heavy, falls each thund’ring blow. As when in Ætna’s caves the giant brood, The one-ey’d servants of the Lemnian god, In order round the burning anvil stand, And forge, with weighty strokes, the forked brand; The shaking hills their servile toils confest, And echoes rattling through each dark recess: So rag’d the fight. Epigoniad, b. 5.
O thou fond many! with what loud applause
Did'st thou beat heav'n with blessing Bolingbroke
Before he was what thou wou'dst have him be?
And now being trimm'd up in thine own desires,
Thou, beastly feeder, art so full of him,
That thou provok'st thyself to cast him up.
And so, thou common dog, didst thou disgorge
Thy glutton bosom of the royal Richard,
And now thou wou'dst eat thy dead vomit up,
And howl'lt to find it.

Second part, Henry IV. act 1. sc. 6.

The strongest objection that can lie against a comparison, is, that it consists in words only, not in sense. Such false coin, or bastard wit, does extremely well in burlesque; but is far below the dignity of the epic, or of any serious composition:

The noble sifter of Poplicola,
The moon of Rome; chaste as the icicle
That's curdled by the frost from purest snow,
And hangs on Dian's temple. Coriolanus, act 5. sc. 3.

There is evidently no resemblance between an icicle, and a woman, chaste or unchaste: but chastity is cold in a metaphorical sense, and an icicle is cold in a proper sense; and this verbal resemblance, in the hurry and glow of composing, has been thought a sufficient foundation for the simile. Such phantom similes are mere witticisms, which ought to have no quarter, except where purposely introduced to provoke laughter. Lucian, in his dissertation upon history, talking of a certain author, makes the following comparison, which is verbal merely.

This author's descriptions are so cold, that they surpass the Caspian snow, and all the ice of the north.

Virgil has not escaped this puerility:

——Ego Sardois videar tibi amator herbis. Ibid. 41.

Gallo cujus amor tantum mihi crescit in horas,
Quantum vere novo viridis se subjicit alnus. Bucol. x. 73.
Nor
Nor Taft, in his Aminta:
Picciola e' l' ape, e sa col picciol morso
Pur gravi, e pur moleste le ferite;
Ma, quel cosa è più picciola d'amore,
Se in ogni breve spatio entra, e s'afconde.
In ogni breve spatio? hor, sotto a l'ombra
De le palpebre, hor trá minuti rivi
D'un biondo crine, hor dentro le pozzette
Che forma un dolce riso in bella guancia;
E pur sà tanto grandi, e si mortali,
E cosi inmedicabili le piaghe.

Nor Boileau, the chasteft of all writers; and that even in his art of poetry:
Ainsi tel autrefois, qu'on vit avec Faret
Charbonner de ses vers les murs d'un cabaret,
S'en va mal à propos, d'une voix insolente,
Chanter du peuple Hébreu la fuite triomphante,
Et poursuivant Moïse au travers des déserts,
Court avec Pharaon se noyer dans les mers.

Mais allons voir le Vrai jusqu'à sa source même,
Un dévot aux yeux creux, et d'ablutionence blême,
S'il n'a point le cœur juste, est affreux devant Dieu.
L'Evangile au Chrétien ne dit, en aucun lieu,
Sois dévot: elle dit, Sois doux, simple, équitable:
Car d'un dévot souvent au Chrétien véritable
La distance est deux fois plus longue, à mon avis,
Que du Pôle Antarctique au Détroit de Davis.

--- But for their spirits and souls
This word rebellion had froze them up
As fish are in a pond.

Second part, Henry IV. act 1. sc. 3.
Queen. The pretty vaulting sea refus'd to drown me;
Knowing, that thou wou'dst have me drown'd on shore
With tears as salt as sea, through thy unkindnefs.

Second part, Henry VI. act 3. sc. 6.
Here there is no manner of resemblance but in the word
drown; for there is no real resemblance between being
drown'd at sea, and dying of grief at land. But per-
haps this sort of tinsel wit may have a propriety in it,
Comparisons.

Ch. XIX.

when used to express an affected, not a real passion, which was the Queen's case.

Pope has several similes of the same stamp. I shall transcribe one or two from the Essay on Man, the grave and most instructive of all his performances:

And hence one master passion in the breast,
Like Aaron's serpent, swallows up the rest,

_Epif. 2. l. 131._

And again, talking of this same ruling or master passion:

Nature its mother, Habit is its nurse;
Wit, spirit, faculties, but make it worse;
Reason itself but gives it edge and pow'r;
As heav'n's blest'sd beam turns vinegar more sour.

_Ibid. 1. 145._

Lord Bolingbroke, speaking of historians:

Where their sincerity as to fact is doubtful, we strike out truth by the confrontation of different accounts; as we strike out sparks of fire by the collision of flints and steel.

Let us vary the phrase a very little, and there will not remain a shadow of resemblance. Thus,

We discover truth by the confrontation of different accounts; as we strike out sparks of fire by the collision of flints and steel.

Racine makes Pyrrhus say to Andromaque,

_Vaincu, chargé de fers, de regrets consumé,
Brulé de plus de feux que je n'en allumai,
Helas ! sus-je jamais si cruel que vous l'etes ?._

And Orestes in the same strain:

_Que les Scythes font moins cruels qu'Hermione._

Similes of this kind put one in mind of a ludicrous French song:

_Je croyois Janneton_
_Aussi douce que belle :_
_Je croyois Janneton_
_Plus douce qu'un mouton ;_
_Hela ! helas !
_Elle est cent fois, mille fois, plus cruelle_
_Que n'est le tigre aux bois._

_Again:
Again:

**Helas! l’amour m’a pris,**
**Comme le chat fait la fouris.**

**A vulgar Irish ballad begins thus:**

_I have as much love in store_
_As there’s apples in Portmore._

Where the subject is burlesque or ludicrous, such similes are far from being improper. Horace says pleasantly,

_Quanquam tu levior cortice._

**L. 3 ode 9.**

**And Snakespeare,**

_In breaking oaths he’s stronger than Hercules._

And this leads me to observe, that beside the foregoing comparisons, which are all serious, there is a species, the end and purpose of which is to excite gaiety or mirth. Take the following examples.

**Falstaff,** speaking to his page:

_I do here walk before thee, like a sow that hath overwhelmed all her litter but one._

**Second part, Henry IV. act i. sc. 4.**

_I think he is not a pick purse, nor a horse dealer: but for his verity in love, I do think him as coneave as a cover’d goblet, or a worm-eaten nut._

_As you like it, act 3. sc. 10._

_This sword a dagger had his page,_
_That was but little for his age;_
_And therefore waited on him so,_
_As dwarfs upon knights-errant do._

**Hudibras canto i.**

**Description of Hudibras’s horse:**

_He was well stay’d, and in his gait_
_Preserv’d a grave, majestic state._
_At spur or switch no more he skipt,_
_Or mended pace, than Spaniard whipt:_
_And yet so fiery, he would bound_
_As if he griev’d to touch the ground:_
_That Cæsar’s horse, who, as fame goes,_
_Had corns upon his feet and toes,_
_Was not by half so tender hooft,_

Nor
Nor trod upon the ground so soft.
And as that beast would kneel and stoop,
(Some write, to take his rider up);
So Huidibras his ('tis well known)
Would often do to set him down.

Honour is, like a widow, won
With brisk attempt and putting on,
With entering manfully, and urging;
Not slow approaches, like a virgin.

The sun had long since in the lap
Of Thetis taken out his nap;
And, like a lobster boil'd, the morn
From black to red began to turn.

Books, like men, their authors, have but one way of coming into the world; but there are ten thousand to go out of it, and return no more.

And in this the world may perceive the difference between the integrity of a generous author, and that of a common friend. The latter is observed to adhere close in prosperity, but on the decline of fortune, to drop suddenly off: whereas the generous author, just on the contrary, finds his hero on the dunghill, from thence by gradual steps raises him to a throne, and then immediately withdraws, expecting not so much as thanks for his pains.

The most accomplish'd way of using books at present is, to serve them as some do lords, learn their titles, and then brag of their acquaintance.

Box'd in a chair, the beau impatient sits,
While spouts run clatt'ring o'er the roof by fits;
And ever and anon with frightful din
The leather sounds; he trembles from within.
So when Troy chairmen bore the wooden stead,
Pregnant with Greeks, impatient to be freed,
(Those bully Greeks, who, as the moderns do, Instead of paying chairmen run them through),
Laocoon struck the outside with his spear,
And each imprison'd hero quak'd for fear,

Description of a city-shower. Swift.

Clubs,
Ch. XX.  

Club, diamonds, hearts, in wild disorder seen,  
With throngs promiscuous strow the level green.  
Thus when dispers'd a routed army runs,  
Of Asia's troops, and Africa's sable sons,  
With like confusion, different nations fly,  
Of various habit, and of various dye,  
The pierc'd battalions disunited, fall  
In heaps on heaps; one fate o'erwhelms them all.  

Rape of the Lock, canto 3.

He does not consider, that sincerity in love is as much  
out of fashion as sweet snuff; no body takes it now.  

Careless husband.

Lady Easby. My dear, I am afraid you have provoked  
her a little too far.

Sir Charles O! Not at all. You shall see, I'll sweet-  
en her, and she'll cool like a dish of tea.  

Ibid.

CHAP. XX. FIGURES.

THE reader will not find here a complete lift of  
the different tropes and figures that have been  
carefully noted by antient critics and grammarians; a  
list swelled to such a size by containing every unusual  
expression, as to make it difficult to distinguish many of  
their tropes and figures from plain language. I little  
imagined that much could be made of tropes and figures  
in the way of rational criticism; till discovering by a  
fort of accident, that many of them depend on princi-  
ciples formerly explained, I gladly embraced an oppor-  
tunity to show the influence of these principles where  
it would be the least expected. Confining myself there-  
fore to such figures, I am luckily freed from much trash;  
without dropping, so far as I remember, any trope or  
figure that merits a proper name. And I begin with  
Prospopoeia or personification, which is justly intitled  
to the first place.

SECT. I. PERSONIFICATION.

The bestowing sensibility and voluntary motion  
upon things inanimate, is so bold a figure, as to  
require, one should imagine, very peculiar circumstan-  
ces for operating the delusion: and yet, in the language  
of
of poetry, we find variety of expressions, which, though commonly reduced to that figure, are used without ceremony, or any sort of preparation; as for example, thirsty ground, hungry church-yard, furious dart, angry ocean. These epithets, in their proper meaning, are attributes of sensible beings: what is their meaning, when apply'd to things inanimate? do they make us conceive the ground, the church-yard, the dart, the ocean, to be endued with animal functions? This is a curious inquiry; and whether so or not, it cannot be declined in handling the present subject.

The mind agitated by certain passion, is prone to bestow sensibility upon things inanimate*. This is an additional instance of the influence of passion upon our opinions and belief†. I give some examples. Antony, mourning over the body of Cæsar, murdered in the senator-house, vents his passion in the following words.

Antony. O pardon me, thou bleeding piece of earth, That I am meek and gentle with thee butchers. Thou art the ruins of the noblest man That ever lived in the tide of times.

Julius Cæsar, act 3. sc. 4.

Here Antony must have been impressed with some sort of notion, that the body of Cæsar was listening to him, without which the speech would be foolish and absurd. Nor will it appear strange, after what is said in the chapter above cited, that passion should have such power over the mind of man. In another example of the same kind, the earth, as a common mother, is animated to give refuge against a father's unkindness:

Almeria. O Earth, behold, I kneel upon thy bosom, And bend my flowing eyes to stream upon Thy face, imploring thee that thou wilt yield; Open thy bowels of compassion, take Into thy womb the last and most forlorn Of all thy race. Hear me, thou common parent; — I have no parent else. — Be thou a mother, And step between me and the curse of him, Who was — who was, but is no more a father; But

* Page 204.   † Chap. 2. part 5.
But brand; my innocence with horrid crimes;
And for the tender names of child and daughter,
Now calls me murderer and parricide.

Mourning Bride, ad 4. sc. 7.

Plaintive passions are extremely solicitous for vent;
and a soliloquy commonly answers the purpose: but
when such a passion becomes excessive, it cannot be
gratified but by sympathy from others; and if denied
that consolation in a natural way, it will convert even
things inanimate into sympathizing beings. Thus
Philoctetes complains to the rocks and promontories of the
isle of Lemnos*; and Alcestes dying, invokes the sun,
the light of day, the clouds, the earth, her husband’s
palace, &c. †. Moschus, lamenting the death of Bion,
conceives, that the birds, the fountains, the trees, la-
ment with him: the shepherd, who in Virgil bewails the
death of Daphnis, expresseth himself thus:

Daphni, tuum Pænos etiam ingemuisse leones
Interitum, montesque feri sylvæque loquuntur.

Eclogue v. 27.

Again:

Illum etiam lauri, illum etiam flevere myricæ.
Pinifer illum etiam sula sub rupe jacentem
Mænalus, et gelidi fleverunt saxa Lycae.

Eclogue x. 13.

Again:

Ho visto al pianto mio
Responder per pietate i fassi e l’onde;
E sospirar le fronde
Ho visto al pianto mio.
Ma non ho visto mai,
Ne spero di videre
Compassion ne la crudele, e bella.

Aminta di Tasso, ad 1. sc. 2:

That such personification is derived from nature, will
not admit the least remaining doubt, after finding it in
poems of the darkest ages and remotest countries. No

* Philoctetes of Sophocles, ad 4. sc. 2.
† Alcestes of Euripides, ad 2: sc. 1.
figure is more frequent in Ossian’s works; for example,

The battle is over, said the King, and I behold the blood of my friends. Sad is the heath of Lena, and mournful the oaks of Cromla.

Again:

The sword of Gaul trembles at his side, and longs to glitter in his hand.

King Richard having got intelligence of Bolingbroke’s invasion, says, upon landing in England from his Irish expedition, in a mixture of joy and resentment,

—— I weep for joy
To stand upon my kingdom once again.
Dear earth, I do salute thee with my hand,
Though rebels wound thee with their horses hoofs.
As a long parted mother with her child
Plays fondly with her tears, and smiles in meeting;
So weeping, smiling, greet I thee, my earth,
And do thee favour with my royal hands.
Fret not thy sovereign’s foe, my gentle earth,
Nor with thy tweets comfort his rav’rous sense:
But let thy spiders that suck up thy venom,
And heavy-gaited toads, lie in their way;
Doing annoyance to the treach’rous feet,
Which with usurping steps do trample thee.
Yield flinging nettles to mine enemies!
And, when they from thy bosom pluck a flower,
Guard it, I pr’ythee, with a lurking adder;
Whose double tongue may with a mortal touch
Throw death upon thy sovereign’s enemies.
Mock not my senseless conjuration, Lords!
This earth shall have a feeling; and these stones
Prove armed soldiers, ere her native king
Shall faulter under foul rebellious arms.

Richard II. act 3. sc. 2.

After a long voyage, it was customary among the antients to salute the natal foil. A long voyage being of old a greater enterprize than at present, the safe return to one’s country after much fatigue and danger, was a circumstance extremely delightful; and it was natural to give the natal foil a temporary life, in order to sympathize with the traveller. See an example, Agamemnon
Figures. 149

Gamémonn of Æschilus, act 3. in the beginning. Regret for leaving a place one has been accustomed to, has the same effect.*

Terror produceth the same effect: it is communicated in thought to every thing around, even to things inanimate:

Speaking of Polyphemus,
Clamorem immensus tollit, quo pontus et omnes
IntREMuerE undæ, penitusque exterrita tellus
Italæ. Æneid. iii. 672.

--- As when old Ocean roars,
And heaves huge surges to the trembling shores.
Iliad ii. 249.

And thund'ring footsteps shake the sounding shore.
Iliad ii. 549.

Then with a voice that shook the vaulted skies.
Iliad v. 431.

Go, view the settling sea. The stormy wind is laid; but the billows still tremble on the deep, and seem to fear the blast.

Racine, in the tragedy of Phædra, describing the sea-monster that destroy'd Hippolytus, conceives the sea itself to be struck with terror as well as the spectators:

Le flot qui l'apporta recule epouvanté.

A man also naturally communicates his joy to all objects around, animate or inanimate:

--- As when to them who fail
Beyond the Cape of Hope, and now are past
Mozambic, off at sea north-east winds blow
Sabean odour from the spicy shore
Of Araby the Bleft; with such delay
Well pleas'd, they slack their course, and many a league
Chear'd with the grateful smell old Ocean smiles.

Paradise lost, b. 4.

I have been profuse of examples, to show what power many passions have to animate their objects. In all the foregoing examples, the personification, if I mistake not,

* Philoctetes of Sophocles, at the close.
Figures. Ch. XX.

not, is so complete as to afford an actual conviction, momentary indeed, of life and intelligence. But it is evident from numberless instances, that personification is not always so complete: it is a common figure in descriptive poetry, understood to be the language of the writer, and not of the persons he describes: in this case, it seldom or never comes up to conviction, even momentary, of life and intelligence. I give the following examples.

First in his east the glorious lamp was seen, Regent of day, and all th'horizon round Invested with bright rays; jocund to run His longitude through heav'n's high road: the gray Dawn, and the Pleiades before him dance'd, Shedding sweet influence. Less bright the moon But opposite, in level'd west was set His mirror, with full face borrowing her light From him; for other light she needed none. 

Paradise lost, b. 7. l. 370.*

Night's candles are burnt out, and jocund day Stands tiptoe on the misty mountain-tops. 

Romeo and Juliet, act 3. sc. 7.

But look, the morn, in russet mantle clad, Walks o'er the dew of yon high eastward hill. 

Hamlet, act 1. sc. 1.

It may, I presume, be taken for granted, that, in the foregoing instances, the personification, either with the poet or his reader, amounts not to a conviction of intelligence; nor that the sun, the moon, the day, the morn, are here understood to be sensible beings. What then is the nature of this personification? I think it must be referred to the imagination: the inanimate object is imagined to be a sensible being, but without any conviction, even for a moment, that it really is so. Ideas or fictions

* The chastity of the English language, which in common usage distinguishes by genders no words but what signify beings male and female, gives thus a fine opportunity for the prosopopeia; a beauty unknown in other languages, where every word is masculine or feminine.
Fictions of imagination have power to raise emotions in the mind; and when any thing inanimate is, in imagination, supposed to be a sensible being, it makes by that means a greater figure than when an idea is formed of it according to truth. The elevation, however, in this case, is far from being equal to what it is when the personification amounts to actual conviction. Thus personification is of two kinds. The first, or nobler, may be termed *passionate personification*: the other, or more humble; *descriptive personification*; because seldom or never is personification in a description carried to the length of conviction.

The imagination is so lively and active, that its images are raised with very little effort; and this justifies the frequent use of descriptive personification. This figure abounds in Milton's *Allegro* and *Penelope*.

Abstract and general terms, as well as particular objects, are often necessary in poetry. Such terms however are not well adapted to poetry, because they suggest not any image: I can readily form an image of Alexander or Achilles in wrath; but I cannot form an image of wrath in the abstract, or of wrath independent of a person. Upon that account, in works addressed to the imagination, abstract terms are frequently personified: but such personification rests upon imagination merely, not upon conviction:

Sed mihi vel Tellus optem prius ima dehiscat;
Vel Pater omnipotens adigat me fulmine ad umbras;
Pallentes umbras Erebi, noctemque profundam,
Ante pudor quam te violo, aut tua jura refolvo.

*Æneid. iv. 1. 24.*

Thus, to explain the effects of slander, it is imagined to be a voluntary agent:

No, 'tis Slander;
Whose edge is sharper than the sword; whose tongue Out-venoms all the worms of Nile; whose breath Rides on the-posting winds, and doth belie
All corners of the world, kings, queens, and states,
Maids, matrons: nay, the secrets of the grave

† See appendix, containing definitions and explanation terms, § 28.
This viperous Slander enters.

Shakespeare, Cymbeline, act 3, sc. 4.

As also human passions: take the following example:

--- For Pleasure and Revenge
Have ears more deaf than adders, to the voice.
Of any true decision.

Troilus and Cressida, act 2, sc. 4.

Virgil explains fame and its effects by a still greater variety of action.* And Shakespeare personifies death and its operations in a manner extremely fanciful:

--- Within the hollow crown
That rounds the mortal temples of a king,
Keeps Death his court; and there the antic sits,
Scoffing his state, and grinning at his pomp;
Allowing him a breath, a little scene
To monopolize, be fear'd, and kill with looks;
Infusing him with self and vain conceit
As if his flesh, which walls about our life,
Were brass impregnable; and humour'd thus,
Comes at the last, and with a little pin
Bores through his castle-walls, and farewell king.

Richard II. act 3, sc. 4.

Not less successfully is life and action given even to sleep:

King Henry. How many thousands of my poorest subjects
Are at this hour asleep! O gentle Sleep,
Nature's soft nurse, how have I frightened thee,
That thou no more wilt weigh my eye-lids down,
And sleep my senses in forgetfulness?
Why rather, Sleep, ly'st thou in smoky cribs,
Upon uneasy pallets stretching thee,
And hush'd with buzzing night-flies to thy slumber,
Than in the perfum'd chambers of the great,
Under the canopies of costly state,
And lull'd with sounds of sweetest melody?
O thou dull god, why ly'st thou with the vile
In loathsome beds, and leav'st the kingly couch,
A watch-case to a common larum bell?
Wilt thou, upon the high and giddy mast,

Seal

* Æneid. iv. 173.
Seal up the ship-boy's eyes, and rock his brains
In cradle of the rude imperious surge;
And in the visitation of the winds,
Who take the ruffian billows by the top,
Curling their monstrous heads, and hanging them
With deaf'ning clamours in the flipp'ry throunds,
That, with the hurly, Death itself awakes?
Can't thou, O partial Sleep, give thy repose
To the wet sea-boy in an hour so rude;
And, in the calmest and the stilllest night,
With all appliances and means to boot,
Deny it to a king? Then, happy low! lie down;
Uneasy lies the head that wears a crown.

Second part, Henry IV. act 3. sc. 1.

I shall add one example more, to show that descriptive
personification may be used with propriety, even where
the purpose of the discourse is instruction merely:
Oh! let the steps of youth be cautious,
How they advance into a dangerous world;
Our duty only can conduct us safe:
Our passions are seducers: but of all,
The strongest Love: he first approaches us:
In childish play, wantoning in our walks:
If heedlessly we wander after him,
As he will pick out all the dancing-way,
We're lost, and hardly to return again.
We should take warning: he is painted blind,
To shew us, if we fondly follow him,
The precipices we may fall into.
Therefore let Virtue take him by the hand:
Directed so, he leads to certain joy.

Southern.

Hitherto success has attended our steps; but whether we shall complete our progress with equal success, seems doubtful; for though it was to be expected that by this time every difficulty should be over, yet when we look back to the expressions mentioned in the beginning, thirsty ground, furious dart, and such like, it seems not less difficult than at first to say whether there be here any sort of personification. Such expressions evidently raise not the slightest conviction of sensibility: nor do I think they amount to descriptive personification; be-
cause, in them, we do not even figure the ground or the dart to be animated. If so, they cannot at all come under the present subject. And to shew more clearly that they cannot, I shall endeavour to explain what effect such expressions have naturally upon the mind. In the expression angry ocean, for example, do we not tacitly compare the ocean in a storm to a man in wrath? It is by this tacit comparison that the expression acquires a force or elevation, above what is found in an epithet proper to the object: which comparison, though tacit only, excludes personification; because, by the very nature of comparison, the things compared are kept distinct, and the native appearance of each is preserved. It will be shown afterward, that expressions of this kind belong to another figure, which I term a figure of speech, and which employs the seventh section of the present chapter.

Though thus in general we can distinguish descriptive personification from what is merely a figure of speech, it is however often difficult to say, with respect to some expressions, whether they be of the one kind or of the other. Take the following instances.

The moon shines bright: in such a night as this, When the sweet wind did gently kiss the trees, And they did make no noise; in such a night, Troilus methinks mounted the Trojan wall, And slipt his soul towards the Grecian tents Where Cressid lay that night.

Merchant of Venice, act 5. sc. 1.

I have seen Th' ambitious ocean swell, and rage, and foam, To be exalted with the threatening clouds.

Julius Cæsar, act 1. sc. 6:

With respect to these and numberless other instances of the same kind, it must depend upon the reader, whether they be examples of personification, or of a figure of speech merely: a sprightly imagination will advance them to the former class; with a plain reader they will remain to the latter.

Having thus at large explained the present figure, its different kinds, and the principles from whence derived; what
what comes next in order is, to shew in what cases it
may be introduced with propriety, when it is suitable,
when unsuitable. I begin with observing, that passion-
ate personification is not promoted by every passion in-
differently. All dispiriting passions are averse to it; and
remorse, in particular, is too serious and severe to be
gratified with a phantom of the mind. I cannot there-
fore approve the following speech of Enobarbus, who
had deserted his master Antony:

Be witness to me, O thou blessed moon,
When men revolted shall upon record
Bear hateful memory, poor Enobarbus did
Before thy face repent

Oh sovereign mistress of true melancholy,
The poisonous damp of night dispunget upon me,
That life, a very rebel to my will,
May hang no longer on me.

**Antony and Cleopatra, act 4. sc. 7.**

If this can be justified, it must be upon the Heathen
system of theology, which converted into deities the sun,
moon, and stars.

Secondly, After a passionate personification is proper-
ly introduced, it ought to be confined to its proper pro-
vince, that of gratifying the passion, without giving
place to any sentiment or action but what answers that
purpose; for personification is at any rate a bold figure,
and ought to be employ'd with great reserve. The pas-
sion of love, for example, in a plaintive tone, may give
a momentary life to woods and rocks, in order to make
them sensible of the lover's distress: but no passion will
support a conviction so far stretched, as that these woods
and rocks should be living witnesses to report the dis-
tress to others;

Chi' t'ami piu de la mia vita,
Se tu no' fai, crudele,
Chie dilo a queste selve
Che t'el diranno, et t'el diran con esse
Le fere loro e i duri sterpi, e i lacci
Di questi alpetri monti,
Chi' ho si spesse volte
Inteneriti al suon de' miei lamenti.

**Pastor Fido, act 3. sc. 3.**
No lover who is not crazed will utter such a sentiment: it is plainly the operation of the writer, indulging his inventive faculty without regard to nature. The same observation is applicable to the following passage:

In winter's tedious nights sit by the fire
With good old folks, and let them tell thee tales
Of woful ages, long ago betid:
And ere thou bid good night, to quit their grief,
Tell them the lamentable fall of me,
And send the hearers weeping to their beds.
For why! the senseless brands will sympathise.
The heavy accent of thy moving tongue,
And in compassion weep the fire out.

Richard II. act 5. sc. 1.

One must read this passage very seriously to avoid laughing. The following passage is quite extravagant: the different parts of the human body are too intimately connected with self, to be personified by the power of any passion; and after converting such a part into a sensible being, it is still worse to make it be conceived as rising in rebellion against self:

Cleopatra. Hastie, bear my arm, and rouse the serpent's fury.

Coward flesh

Would'st thou conspire with Cæsar, to betray me,
As thou wert none of mine? I'll force thee to't.

Dryden, All for Love, act 5.

Next comes descriptive personification; upon which I must observe, in general, that it ought to be cautiously used. A personage in a tragedy, agitated by a strong passion, deals in warm sentiments; and the reader, catching fire by sympathy, relishes the boldest personifications: but a writer, even in the most lively description, taking a lower flight, ought to content himself with such easy personifications as agree with the tone of mind inspired by the description. Nor is even such easy personification always admitted; for in plain narrative, the mind, serious and sedate, rejects personification altogether: Strada, in his history of the Belgic wars, has the following passage, which, by a strained elevation above the tone of the subject, deviates into burlesque.
Neither do I approve, in Shakeispeor, the speech of
King John, gravely exhorting the citizens of Angiers to
a surrender; though a tragic writer has much greater
latitude than a historian. Take the following specimen
of this speech.

The cannons have their bowels full of wrath;
And ready mounted are they to spit forth
Their iron-indignation 'gainst your walls.

SECONDLY, IF EXTRAORDINARY MARKS OF RESPECT TO A PERSON OF LOW RANK BE RIDICULOUS, NOT LESS SO IS THE PERSONIFICATION OF A LOW SUBJECT. THIS RULE CHIEFLY REGARDS DESCRIPTIVE PERSONIFICATION; FOR A SUBJECT CAN HARDLY BE LOW THAT IS THE CAUSE OF A VIOLENT PASSION; IN THAT CIRCUMSTANCE, AT LEAST, IT MUST BE OF IMPORTANCE. BUT TO ALIGN ANY RULE OTHER THAN TASTE MERELY, FOR AVOIDING THINGS BELOW EVEN DESCRIPTIVE PERSONIFICATION, WILL, I AM AFRAID, BE A HARD TASK. A POET OF SUPERIOR GENIUS, POSSESSING THE POWER OF INFLAMING THE MIND, MAY TAKE LIBERTIES THAT WOULD BE DANGEROUS FOR OTHERS. HOMER APPEARS NOT EXTRAVENTANT IN ANIMATING HIS DARTS AND ARROWS: NOR THOMSON IN ANIMATING THE SEASONS, THE WINDS, THE RAINS, THE Dews; HE EVEN VENTURES TO ANIMATE THE DIAMOND, AND DOETH IT WITH PROPERTY:

--- THAT POLISH'D BRIGHT
And all its native lustre let abroad,
Dares, as it sparkles on the fair-one's breast,
With vain ambition emulate her eyes.

But there are things familiar and base, to which personification cannot descend: in a composed state of mind, to animate a lump of matter even in the most rapid flight of fancy, degenerates into burlesque:

How now! what noise! that spirit's poffeis'd with haft'e,
That wounds th' unrefilling poftern with these strokes,
Shakeispear, Measure for Measure, aA 4. sc. 6.

--- OR FROM THE SHORE
The plovers when to flatter o'er the heath,
And sing their wild notes to the lift'ning waste.

Thomson, Spring, l. 23.

Speaking of a man's hand cut off in battle:

Te decisa suum, Laride, dextera - quærit:
Semianimesque micant digiti; ferrumque retraquant.

Æneid. x. 395.

The personification here of a hand is insufferable, especially in a plain narration: not to mention that such a trivial incident is too minutely described.

The same observation is applicable to abstract terms, which ought not to be animated unless they have some natural dignity. Thomson, in this article, is extremely licentious; witness the following instances out of many.

O vale of bliss! O softly swelling hills!
On which the power of cultivation lies,
And joys to see the wonders of his toil.

Summer, l. 1423.

Then fated Hunger bids his brother Thirst:
Produce the mighty bowl:
Nor wanting is the brown October, drawn
Mature and perfect, from his dark retreat
Of thirty years; and now his honest front
Flames in the light resulgent. Autumn, l. 516.

Thirdly, It is not sufficient to avoid improper subjects: some preparation is necessary, in order to rouse the mind; for the imagination refuses its aid, till it be warmed at least, if not enflamed. Yet Thomson, without the least ceremony or preparation, introduceth each season as a sensible being:

From brightening fields of æther fair disclos'd,
Child of the sun, resulgent Summer comes,
In pride of youth, and felt through Nature's depth.
He comes attended by the sultry hours,
And ever-fanning breezes, on his way;
While from his ardent look, the turning Spring
Averts her blushful face, and earth and skies
All smiling, to his hot dominion leaves.

Summer, l. 733.

See Winter comes, to rule the vary'd year,
Sullen and sad with all his rising train.
Vapours, and clouds, and storms. Winter, l. 1.

This has violently the air of writing mechanically without taste. It is not natural, that the imagination of a writer should be so much heated at the very commencement; and, at any rate, he cannot expect such dulness in his readers. But if this practice can be justified by authority, Thomson has one of no mean note: Vida begins his first eclogue in the following words:

Dicite, vos Musæ, et juvenum memorate querelas; Dicite; nam motas iplas ad carmina cautes Et requiesse suos perhibent vaga flumina cursus.

Even Shakespear is not always careful to prepare the mind for this bold figure. Take the following instance.

Upon these taxations, The clothiers all, not able to maintain The many to them 'longing, have put off The spinners, carders, fullers, weavers; who, Unfit for other life, compell'd by hunger, And lack of other means, in desp'rate manner Daring th'event to th' teeth, are all in uproar, And Danger serves among them.

Henry VIII. act 1. sc. 4.

Fourthly, Descriptive personification, still more than what is passionate, ought to be kept within the bounds of moderation. A reader warmed with a beautiful subject, can imagine, even without passion, the winds, for example, to be animated: but still the winds are the subject; and any action ascribed to them beyond or contrary to their usual operation, appearing unnatural, seldom fails to banish the illusion altogether: the reader's imagination too far strained, refuses its aid; and the description becomes obscure, instead of being more lively and striking. In this view, the following passage, describing Cleopatra on shipboard, appears to me exceptionable.

The barge she sat in, like a burnish'd throne, Burnt on the water; the poop was beaten gold, Purple the sails, and so perfumed, that The winds were love-sick with 'em:

Antony and Cleopatra, act 2. sc. 3.
The winds in their impetuous course have so much the appearance of fury, that it is easy to figure them wreaking their resentment against their enemies, by destroying houses, ships, &c.; but to figure them love-sick has no resemblance to them in any circumstance. In another passage, where Cleopatra is also the subject, the personification of the air is carried beyond all bounds:

The city cast
Its people out upon her; and Antony
Inthron'd i'th'market-place, did sit alone,
Whistling to th'air, which but for vacancy,
Had gone to gaze on Cleopatra too,
And made a gap in nature.

Antony and Cleopatra, act 2. sc. 3.

The following personification of the earth or soil is not less wild:

She shall be dignify'd with this high honour
'To bear my Lady's train; left the base earth
Should from her vesture chance to steal a kiss;
And of so great a favour growing proud,
Disdain to root the summer-swelling flower,
And make rough winter everlastingly.

Two Gentlemen of Verona, act 2. sc. 7.

Shakespeare, far from approving such intemperance of imagination, puts this speech in the mouth of a ranting lover. Neither can I relish what follows:

Omnia quæ, Phœbo quondam meditante, beatus
Audiit Eurotas, justitque ediscere lauros,
Ille canit.

Virgil. Buc. vi. 82.

The cheerfulness singly of a pastoral song, will scarce support personification in the lowest degree. But admitting, that a river gently flowing may be imagined a sensible being listening to a song, I cannot enter into the conceit of the river's ordering his laurels to learn the song: here all resemblance to any thing real is quite lost. This however is copied literally by one of our greatest poets; early indeed, before maturity of taste or judgment:

Thames heard the numbers as he flow'd along,
And bade his willows learn the moving song.

Pope's Pastoral, p. 14. l. 3.

This
This author, in riper years, is guilty of a much greater deviation from the rule. Dullness may be in agigned a deity or idol, to be worshipped by bad writers; but then some sort of disguise is requisite, some bastard virtue must be bestowed to give this idol a plausible appearance. Yet in the Dunciad, Dullness, without the least disguise, is made the object of worship: the mind rejects such a fiction as unnatural; for dullness is a defect, of which even the dullest mortal is ashamed:

Then he: great tamer of all human art!
First in my care, and ever at my heart;
Dullness! whole good old cause I yet defend,
With whom my muse began, with whom shall end,
E'er since Sir Fopling's periwig was praise,
To the last honours of the Bull and Bays!
O thou! of bus'ness the directing soul!
To this our head, like bias to the bowl,
Which, as more pond'rous, makes its aim more true,
Obliquely wading to the mark in view:
O! ever gracious to perplex'd mankind,
Still spread a healing mist before the mind:
And, left we err by Wit's wild dancing light,
Secure us kindly in our native night.
Or, if to wit a coxcomb make pretence,
Guard the sure barrier between that and sense;
Or quite unravel all the reas'ning thread,
And hang some curious cobweb in its stead!
As, forc'd from wind-guns, lead itself can fly,
And pond'rous slugs cut swiftly through the sky;
As clocks to weight their nimble motion owe,
The wheels above urg'd by the load below:
Me Emptiness, and Dullness could inspire,
And were my elascticity, and fire.  B. i. 163.

The following instance is stretched beyond all resemblance; it is bold to take a part or member of a living creature, and to bestow upon it life, volition, and addition: after animating two such members, it is still bolder to make one envy the other; for this is wide of any resemblance to reality:

--- De nostri baci

Meritamenti
Fifthly, The enthusiasm of passion may have the effect to prolong passionate personification: but descriptive personification cannot be dispatched in too few words; a circumstantial description dissolves the charm, and makes the attempt to perfonify appear ridiculous. Homer succeeds in animating his darts and arrows: but such personification spun out in a French translation, is mere burlesque:

"Et la flèche en furie, avide de son sang,
Part, vole à lui, l'atteint, et lui perce le flanc."

Horace says happily,

"Poft equitem sedet atra Cura."

See how this thought degenerates by being divided, like the former, into a number of minute parts:

"Un sou rempli d'erreurs, que le trouble accompagne
Et malade à la ville ainsi qu'à la compagne,
En vain monte à cheval pour tromper son ennui,
Le Chagrin monte en croupe, et galope-avec lui.

A poet, in a short and lively expression, may animate his muse, his genius, and even his verse: but to animate his verse, and to address a whole epistle to it, as Boileau doth *, is insupportable.

The following passage is not less faulty.
Her fate is whisper'd by the gentle breeze,
And told in sighs to all the trembling trees:
The trembling trees, in ev'ry plain and wood,
Her fate remurmur to the silver flood;
The silver flood, so lately calm, appears
Swell'd with new passion, and o'erflows with tears;
The winds, and trees, and floods, her death deplore,
Daphne, our grief! our glory! now no more.

Pope's Pastorals, iv. 61.

Let grief or love have the power to animate the winds,
the trees, the floods, provided the figure be dispatched
in a single expression: even in that case, the figure seldom
has a good effect; because grief or love of the
pastoral kind, are causes rather too faint for so violent
an effect as imagining the winds, trees, or floods, to be
sensible beings. But when this figure is deliberately
spread out with great regularity and accuracy, through
many lines, the reader, instead of relishing it, is struck
with its ridiculous appearance.

S. E. C. T. II. APOSTROPHE.

This figure and the former are derived from the
same principle. If, to humour a plaintive passion, we can bestow a momentary sensibility upon an
inanimate object, it is not more difficult to bestow a
momentary presence upon a sensible being who is absent:

Hinc Drepani me portus et illætabilis ora
Accipit. Hic, pelagi tot tempestatibus actus,
Heu! genitorem, omnis curæ causæque levamen,
Amitto Anchisen: hic me pater optime sejsum
Deseris, heu! tantis nequicquam erepte periclis.
Nec vates Helenus, cum multa horrenda moneret,
Hos mihi prædixit luctus; non dira Celæno.

Æneid. iii. 707.

Strike the harp in praise of Bragela, whom I left in
the isle of mist, the spouse of my love. Doft thou raise
thy fair face from the rock to find the falls of Cuchullin?
The sea is rolling far distant, and its white foam shall
deceive thee for my falls. Retire, for it is night, my
love, and the dark winds sigh in thy hair. Retire to the
hall of my feasts, and think of the times that are past; for
for I will not return till the storm of war is gone. O Connal, speak of wars and arms, and send her from my mind; for lovely with her raven-hair is the white-bosom'd daughter of Sorglan. Fingal, b. 1.

Speaking of Fingal absent,

Happy are thy people, O Fingal, thine arm shall fight their battles. Thou art the first in their dangers; the wifeest in the days of their peace: thou speakest, and thy thousands obey; and armies tremble at the sound of thy steel. Happy are thy people, O Fingal.

This figure is sometimes joined with the former: things inanimate, to qualify them for listening to a passionate expostulation, are not only personified, but also conceived to be present:

Et, si fata Deum, si mens non laeva suisset,
Impulerat ferro Argolicas foedare latebras:
Trojaque nunc flares, Priamique arx alta maneris.

Æneid. ii. 54.

Helena. ———— Poor Lord, is't I
That chafe thee from thy country, and expose
Those tender limbs of thine to the event
Of none sparing-war? And is it I
That drive thee from the sportive court, where thou
Wast shot at with fair eyes, to be the mark
Of smoky muskets? O you leaden messengers,
That ride upon the violent speed of fire,
Fly with false aim; pierce the still moving air
That sings with piercing; do not touch my Lord!

All's well that ends well, act 3 sc. 4.

And let them lift ten thousand swords, said Nathos with a smile: the sons of car-borne Ufnoth will never tremble in danger. Why dost thou roll with all thy foam, thou roaring sea of Ullin? why do ye ruffle on your dark wings, ye whistling tempests of the sky? Do ye think, ye storms, that ye keep Nathos on the coast? No; his soul detains him; children of the night! Althos, bring my father's arms, &c.

Fingal.

Whither hast thou fled, O wind, said the King of Morven! Doft thou ruffle in the chambers of the south, and pursue the shower in other lands? Why comest not thou
thou to my fails, to the blue face of my fea? The foe is in the land of Morven, and the King is absent.

Fingal.

Hast thou left thy blue course in heaven; golden-hair'd son of the sky! The west hath open'd its gates; the bed of thy repose is there. The waves gather to behold thy beauty: they lift their trembling heads; they see thee lovely in thy sleep; but they shrink away with fear. Rest in thy shadowy cave, O Sun! and let thy return be in joy.

Daughter of Heaven, fair art thou! the silence of thy face is pleasant. Thou comest forth in loveliness: the stars attend thy blue steps in the east. The clouds rejoice in thy presence, O Moon! and brighten their dark-brown sides. Who is like thee in heaven, daughter of the night? The stars are ashamed in thy presence, and turn aside their sparkling eyes. Whither dost thou retire from thy course, when the darkness of thy countenance grows? Hast thou thy hall like Ossian? Dwellest thou in the shadow of grief? Have thy sisters fallen from heaven? and are they who rejoiced with thee at night, no more? — Yes, they have fallen, fair light; and often dost thou retire to mourn. — But thou thyself shalt, one night, fail, and leave thy blue path in heaven. The stars will then lift their heads: they, who in thy presence were ashamed, will rejoice.

Fingal.

This figure, like all others, requires an agitation of mind. In plain narrative, as, for example, in giving the genealogy of a family, it has no good effect:

—— Fauno Picus pater; isque parentem Te, Saturne, resert; tu sanguinis ultimus audor.

Aeneid. vii. 43.

S E C T. III. H Y P E R B O L E.

In this figure, by which an object is magnified or diminished beyond the truth, we have another effect of the foregoing principle. An object uncommon with respect to size, either very great of its kind or very little, strikes us with surprize; and this emotion forces upon the mind a momentary conviction that the object is great-
er or less than it is in reality*: the same effect, precisely, attends figurative grandeur or littleness; and hence the hyperbole, which expresses that momentary conviction. A writer, taking advantage of this natural delusion, enriches his description greatly by the hyperbole: and the reader, even in his coolest moments, relishes that figure, being sensible that it is the operation of nature upon a warm fancy.

It cannot have escaped observation, that a writer is generally more successful in magnifying by a hyperbole than in diminishing. The reason is, that a minute object contracts the mind, and fetters its power of imagination; but that the mind, dilated and inflamed with a grand object, moulds objects for its gratification with great facility. Longinus, with respect to a diminishing hyperbole, quotes the following ludicrous thought from a comic poet: "He was owner of a bit of ground not larger than a Lacedemonian letter †." But, for the reason now given, the hyperbole has by far the greater force in magnifying objects; of which take the following examples:

For all the land which thou seest, to thee will I give it, and to thy seed for ever. And I will make thy seed as the dust of the earth: so that if a man can number the dust of the earth, then shall thy seed also be numbered.

Genesis xiii. 15, 16.

Ilia vel intacte segetis per summa volaret Gramina: nec teneras curfu laesisset ariatas.

Aeneid. vii. 368.

Atque imo barathri ter gurgite vaflis
Sorbet in abruptum fluctus, rursusque lub auras:
Erigit alternos, et sidera verberat unda.

Aeneid. iii. 421.

Horrificis juxta tonat Ætna ruinis,
Interdumque atram prorumpit ad æthera nubem,
Turbine sumantem piceo et candente favilla:
Attollitque globos flammarum, et sidera lambit.

Aeneid. iii. 571.

Speaking

* See chap. 8.
† Chap. 31. of his treatise on the sublime.
Speaking of Polyphemus,

Ipse arduus, altaque pulsat Sidera.

When he speaks,
The air, a charter'd libertine is still.

Henry V. act 1. sc. 1.

Now shield with shield, with helmet helmet clos'd,
To armour armour, lance to lance oppos'd,
Host against host with shadowy squadrons drew,
The sounding darts in iron tempels flew,
Victors and vanquish'd join promiscuous cries,
And shrilling shouts and dying groans arise;
With streaming blood the slipp'ry fields are dy'd,
And slaught'ring heroes swell the dreadful tide.

Iliad. iv. 508.

The following may also pass, though stretched pretty far.

E conjungendo à temerario ardore
Estrema forza, e infaticabili lena
Vien che si' impetuoso il ferro gire,
Che ne trema la terra, e'1 ciel balena.

Gierusalemme, cant. 6. ft. 46

Quintilian * is sensible that this figure is natural:
"For," says he, "not contented with truth, we naturally incline to augment or diminish beyond it; and for that reason the hyperbole is familiar even among the vulgar and illiterate:" and he adds, very justly, "That the hyperbole is then proper, when the subject of itself exceeds the common measure." From these premises, one would not expect the following inference, the only reason he can find for justifying this figure of speech, "Conceditur enim amplius dicere, quia dici quantum est non potest: meliusque ultra quam sita "stat oratio." (We are indulged to say more than enough, because we cannot say enough; and it is better to be above than under). In the name of wonder, why this flight and childish reasoning, after observing, that the hyperbole is founded on human nature? I could not resist this personal stroke of criticism; intended not against our author, for no human creature is exempt from error.

* L. 8. cap. 6. in fin.
error, but against the blind veneration that is paid to the antient classic writers, without distinguishing their blemishes from their beauties.

Having examined the nature of this figure, and the principle on which it is erected, I proceed, as in the first section, to the rules by which it ought to be governed. And, in the first place, it is a capital fault, to introduce an hyperbole in the description of any thing ordinary or familiar; for in such a case, it is altogether unnatural, being destitute of surprize, its only foundation. Take the following instance, where the subject is extremely familiar, viz. swimming to gain the shore after a shipwreck.

I saw him beat the surges under him,
And ride upon their backs; he trode the water;
Whose enmity he flung aside, and breasted
The surge most swoln that met him; his bold head
'Bove the contentious waves he kept, and oar'd
Himself with his good arms, in lusty strokes
To th' shore, that o'er his wave borne basis bow'd,
As stooping to relieve him.  

In the next place, it may be gathered from what is said, that an hyperbole can never suit the tone of any dispiriting passion: sorrow in particular will never prompt such a figure; and for that reason the following hyperboles must be condemned as unnatural.

K. Rich. Aumerle, thou weep'lt, my tender-hearted cousin!
We'll make foul weather with despised tears;
Our sighs, and they, shall lodge the summer-corn,
And make a dearth in this revolting land.  

Richard II. act 3. sc. 6.

Draw them to Tyber's bank, and weep your tears
Into the channel, till the lowest stream
Do kiss the most exalted shores of all.  

Julius Cæsar, act 1. sc. 1.

Thirdly, A writer, if he wish to succeed, ought always to have the reader in his eye: he ought in particular never to venture a bold thought or expression, till the reader be warmed and prepared. For that reason, an hyperbole in the beginning of a work can never be in its place. Example:
The nicest point of all, is to ascertain the natural limits of an hyperbole, beyond which being overstrained it hath a bad effect. Longinus, in the above-cited chapter, with great propriety of thought, enters a caveat against an hyperbole of that kind: he compares it to a bow-string, which relaxes by overtraining, and produceth an effect directly opposite to what is intended. To ascertain any precise boundary, would be difficult, if not impracticable. Mine shall be an humbler task, which is, to give a specimen of what I reckon overstrained hyperboles; and I shall be extremely curt upon them, because examples are to be found everywhere: no fault is more common among writers of inferior rank; and instances are found even among classical writers; witness the following hyperbole, too bold even for an Hotspur.

Hotspur, talking of Mortimer:
In single opposition hand to hand,
He did confound the best part of an hour
In changing hardiment with great Glendower.
Three times they breath'd, and three times did they drink,
Upon agreement, of swift Severn's flood;
Who then affrighted with their bloody looks,
Ran fearfully among the trembling reeds,
And hid his crisp'd head in the hollow bank,
Blood-stained with these valiant combatants.

First part, Henry IV. act 1. sc. 4.

Speaking of Henry V.
England ne'er had a king until his time:
Virtue he had, deserving to command:
His brandish'd sword did blind men with its beams:
His arms spread wider than a dragon's wings:
His sparkling eyes, replete with awful fire,
More dazzled, and drove back his enemies,
Than mid-day sun fierce bent against their faces.
What should I say? his deeds exceed all speech:
He never lifted up his hand, but conquer'd.

First part, Henry VI. act 1. sc. 1.

Sea.
It is observable that a hyperbole, even the most extravagant, generally produces some emotion: the present hyperbole is an exception; and the reason is, that numbers, in which the extravagance entirely consists, make no impression upon the imagination when they exceed what can easily be conceived.

Lastly, An hyperbole, after it is introduced with all advantages, ought to be comprehended within the fewest words possible: as it cannot be relished but in the hurry and swelling of the mind, a leisurely view dissolves the charm, and discovers the description to be extravagant at last, and perhaps also ridiculous. This fault is palpable in a sonnet which passthrough one of the most complete in the French language: Phillis, in a long and florid description, is made as far to outshine the sun as he outshines the stars:

Le silence regnoit sur la terre et sur l'onde,
L'air devenoit serai et l'Olimpe vermeil,
Et l'amoureux Zephir affranchi du sommeil,
Refluscitoit les fleurs d'une haleine seconde.
L'Aurore deployoit l'or de sa tresse blonde,
Et feonioit de rubis le chemin du soleil;
Enfin ce Dieu venoit au plus grand appareil
Qu'il soit jamais venu pour éclairer le monde:
Quand la jeune Phillis au visage riant,
Sortant de son palais plus clair que l'orient,
Fit voir une lumiere et plus vive et plus belle.

Sacre flambeau du jour, n'en soiez point jaloux,
Vous parutes alors aussi peu devant elle,
Que les feux de la nuit avoient fait devant vous.

There is in Chaucer a thought expressed in a single line, which
which sets a young beauty in a more advantageous light, than the whole of this much laboured poem:

Up rose the sun, and up rose Emelie.

**Sec. IV.**

The means or instrument conceived to be the agent.

When we survey a number of objects connected together, that which makes the greatest figure employs chiefly our attention; and the emotion it raises, if lively, prompts us even to exceed nature in the conception we form of it. Take the following examples.

For Neleus’ son Alcides’ rage had slain.
A broken rock the force of Pirus threw.

In these instances, the rage of Hercules and the force of Pirus, being the capital circumstances, are so far exalted as to be conceived the agents that produce the effects.

In the following instances, hunger being the chief circumstance in the description, is itself imagined to be the patient.

Whose hunger has not tasted food these three days. *Jane Shore.*

------ As when the force
Of subterranean wind transports a hill. *Paradise lost.*

------ As when the potent rod
Of Amram’s son, in Egypt’s evil day
Wav’d round the coast, upcall’d a pitchy cloud
Of locusts. *Paradise lost.*

**Sec. V.**

A figure, which, among related objects, extends the properties of one to another.

This figure is not dignified with a proper name, because it has been overlooked by writers. It merits, however, a place in this work; and must be distinguished from those formerly handled, as depending on a different principle. *Giddy brink, jovial wine, daring wound,* are examples of this figure. Here are adjectives that cannot be made to signify any quality of the *substantives*
The figures to which they are joined: a brink, for example, cannot be termed giddy in a sense, either proper or figurative, that can signify any of its qualities or attributes. When we examine attentively the expression, we discover, that a brink is termed giddy from producing that effect in those who stand on it: in the same manner a wound is said to be daring, not with respect to itself, but with respect to the boldness of the person who inflicts it: and wine is said to be jovial, as inspiring mirth and jollity. Thus the attributes of one subject are extended to another with which it is connected; and the expression of such a thought must be considered as a figure, because the attribute is not applicable to the subject in any proper sense.

How are we to account for this figure, which we see lies in the thought, and to what principle shall we refer it? Have poets a privilege to alter the nature of things, and at pleasure to bestow attributes upon a subject to which they do not belong? We have had often occasion to inculcate, that the mind passeth easily and sweetly along a train of connected objects; and where the objects are intimately connected, that it is disposed to carry along the good or bad properties of one to another; especially when it is in any degree inflamed with these properties.* From this principle is derived the figure under consideration. Language, invented for the communication of thought, would be imperfect, if it were not expressive even of the slighter propensities and more delicate feelings: but language cannot remain so imperfect among a people who have received any polish; because language is regulated by internal feeling, and is gradually so improved as to express whatever passeth in the mind. Thus, for example, when a sword in the hand of a coward, is termed a coward sword, the expression is signifying of an internal operation; for the mind, in passing from the agent to its instrument, is disposed to extend to the latter the properties of the former. Governed by the same principle, we say listening fear, by extending the attribute listening of the man who listens, to the passion with which he is moved. In the expression, bold deed,

* See chap. 2. part 1. sect. 5.
deed, or audax facinus, we extend the effect to what properly belongs to the cause. But not to waste time by making a commentary upon every expression of this kind, the best way to give a complete view of the subject, is to exhibit a table of the different relations that may give occasion to this figure. And in viewing that table, it will be observed, that the figure can never have any grace but where the relations are of the most intimate kind.

1. An attribute of the cause expressed as an attribute of the effect.

Audax facinus.

Of yonder fleet a bold discovery make.
An impious mortal gave the daring wound.

To my adventurous song,
That with no middle flight intends to soar.

Paradise lost.

2. An attribute of the effect expressed as an attribute of the cause.

Quos periisse ambos misera censebant in mari.

Plautus.

No wonder, fallen such a pernicious height.

Paradise lost.

3. An effect expressed as an attribute of the cause.

Jovial wine, Giddy brink, Drowsy night, Musings midnight, Panting height, Astonish'd thought, Mournful gloom.

Casting a dim religious light.
And the merry bells ring round,
And the jocund rebecks found.
Milton, Comus.

4. An attribute of a subject bestowed upon one of its parts or members.

Longing arms.
It was the nightingale, and not the lark,
That pierc'd the fearful hollow of thine ear.

Romeo and Juliet, act 3. sc. 7.

Oh, lay by
Those most ungentle looks and angry weapons;
Unless you mean my griefs and killing fears.

H 2

Should
Should stretch me out at your relentless feet.
Fair Penitent, act 3.

And ready now
To stoop with wearied wing, and willing feet,
On the bare outside of this world.
Paradise lost, b. 3.

5. A quality of the agent given to the instrument with which it operates.
Why peep your coward swords half out their shells?
6. An attribute of the agent given to the subject upon which it operates.
High-climbing hill.
Milton.

7. A quality of one subject given to another.
Icci, beatis nunc Arabum invides
Gazis. 'Horat. Carm. l. 1. ode 29.
When sapless age, and weak unable limbs,
Should bring thy father to his drooping chair.
Shakespeare.

By art, the pilot through the boiling deep
And howling tempest, steers the fearless ship.
Iliad xxiii. 385.

Then, nothing loath, th'enamour'd fair he led,
And sunk transported on the conscious bed.
Odyssey viii. 337.

A stupid moment motionless the flood.
Summer, l. 1336.

8. A circumstance connected with a subject, expressed as a quality of the subject.
Breezy summit.
'Tis ours the chance of fighting fields to try.
Iliad i. 301.

Oh! had I dy'd before that well fought wall.
Odyssey v. 395.

From this table it appears, that the expressing an effect as an attribute of the cause, is not so agreeable as the opposite expression. The progress from cause to effect is natural and easy: the opposite progress resembles retrograde motion*; and therefore panting height,

* See chap. 1.
after noble thought, are strained and uncouth expressions; which a writer of taste will avoid.

It is not less strained, to apply to a subject in its present state, an epithet that may belong to it in some future state:

Submersaque obtuere puppes. \[\text{\textit{Aeneid. i. 73.}}\]

And mighty ruins fall.

Impious sons their mangled fathers wound.

Another rule regards this figure. That the property of one subject ought not to be bestowed upon another with which that property is incongruous:

K. Rich. — How dare thy joints forget
To pay their awful duty to our presence?

Richard II. act 3. sc. 6.

The connection between an awful superior and his submissive dependent is so intimate, that an attribute may readily be transferred from the one to the other: but awfulness cannot be so transferred, because it is inconsistent with submission.

Sect. VI. Metaphor and Allegory.

A Metaphor differs from a simile, in form only, not in substance: in a simile, the two subjects are kept distinct in the expression, as well as in the thought; in a metaphor, the two subjects are kept distinct in thought only, not in the expression. A hero resembles a lion, and upon that resemblance many similes have been made by Homer and other poets. But instead of resembling a lion, let us take the aid of the imagination, and feign or figure the hero to be a lion: by that variation the simile is converted into a metaphor; which is carried on by describing all the qualities of a lion that resemble those of the hero. The fundamental pleasure here, that of resemblance, belongs to the thought as distinguished from the expression. An additional pleasure arises from the expression: the poet, by figuring his hero to be a lion, goes on to describe the lion in appearance, but in reality the hero; and his description is peculiarly beautiful, by expressing the virtues and qualities of the hero in new terms, which, properly speaking, belong not
to him, but to the lion. This will better be understood by examples. A family connected with a common parent, resembles a tree, the trunk and branches of which are connected with a common root: but let us suppose, that a family is figured, not barely to be like a tree, but to be a tree; and then the simile will be converted into a metaphor, in the following manner.

Edward's sev'n sons, whereof thyself art one, Were sev'n fair branches, springing from one root: Some of these branches by the deit' mies cut: But Thomas, my dear Lord, my life, my Glo'tter, One flourishing branch of his most royal root, Is hack'd down, and his summer-leaves all faded, By Env'y's hand and Murder's bloody axe.

*Richard II* ad 1. sc. 3.

Figuring human life to be a voyage at sea:

There is a tide in the affairs of men, Which, taken at the flood, leads on to Fortune; Omitted, all the voyage of their life Is bound in shallows and in miseries. On such a full sea are we now afloat; And we must take the current when it serves, Or lose our ventures. *Julius Cæsar*, ad 4. sc. 5.

Figuring glory and honour to be a garland of flowers:

*Hotspur.* Would to heav'n, Thy name in arms were now as great as mine! *Pr. Henry*. I'll make it greater, ere I part from thee; And all the budding honours on thy crest. I'll crop, to make a garland for my head. *First part, Henry IV*. ad 4. sc. 9.

Figuring a man who hath acquired great reputation and honour to be a tree full of fruit:

Oh, boys, this story The world may read in me: my body's mark'd With Roman swords; and my report was once First with the bell of note. *Cymbeline* lov'd me; And when a soldier was the theme, my name Was not far off: then was I as a tree, Whose boughs did bend with fruit. But in one night, A storm or robbery, call it what you will, Shook down my mellow hangings, nay my leaves; *And
And left me bare to weather.

Cymbeline, act 3. sc. 3.

Blest be thy soul, thou king of shells, saith Swaran of the dark-brown shield. In peace thou art the gale of spring; in war the mountain-storm. Take now my hand in friendship, thou noble king of Morven. Fingal.

Thou dwellest in the soul of Malvina, son of mighty Offian. My sighs arise with the beam of the east: my tears descend with the drops of night. I was a lovely tree in thy presence, Oscar, with all my branches round me; but thy death came like a blast from the desert, and laid my green head low; the spring returned with its showers, but no leaf of mine arose. Fingal.

I am aware that the term metaphor has been used in a more extensive sense than I give it; but I thought it of consequence, in a disquisition of some intricacy, to confine this term to its proper sense, and to separate from it things that are distinguished by different names. An allegory differs from a metaphor; and what I would chuse to call a figure of speech, differs from both. I proceed to explain these differences. A metaphor is defined above to be an operation of the imagination, figuring one thing to be another. An allegory requires no operation of the imagination, nor is one thing figured to be another: it consists in choosing a subject having properties or circumstances resembling those of the principal subject; and the former is described in such a manner as to represent the latter: the subject thus represented is kept out of view; we are left to discover it by reflection; and we are pleased with the discovery, because it is our own work. Quintilian* gives the following instance of an allegory.

O navis, referent in mare te novi
Fluctus. O quid agis? fortiter occupa portum.

Horat. lib. 1. ode 14.

and explains it elegantly in the following words: "To-
tusque ille Horatii locus, quo navim pro republica,
fluctuum tempeltates pro bellis civilibus, portum pro
pace atque concordia, dicit."

* L. 8. cap. 6. sect. 2.
There cannot be a finer or more correct allegory than the following, in which a vineyard is made to represent God's own people the Jews.

Thou hast brought a vine out of Egypt: thou hast cast out the heathen, and planted it. Thou didst cause it to take deep root, and it filled the land. The hills were covered with its shadow, and the boughs thereof were like the goodly cedar. Why hast thou then broken down her hedges, so that all which pass do pluck her? The boar out of the wood doth waste it, and the wild beast doth devour it. Return, we beseech thee, O God of hosts: look down from heaven, and behold, and visit this vine, and the vineyard thy right hand hath planted, and the branch thou madest strong for thyself.

Psalm 80.

In a word, an allegory is in every respect similar to an hieroglyphical painting, excepting only, that words are used instead of colours. Their effects are precisely the same: a hieroglyphic raises two images in the mind; one seen, which represents one not seen: an allegory does the same; the representative subject is described; and resemblance leads us to apply the description to the subject represented. In a figure of speech, there is no fiction of the imagination employ'd, as in a metaphor, nor a representative subject introduced, as in an allegory. This figure, as its name implies, regards the expression only, not the thought; and it may be defined, the using a word in a sense different from what is proper to it. Thus youth, or the beginning of life, is expressed figuratively by morning of life: morning is the beginning of the day; and in that view it is employ'd to signify the beginning of any other series, life especially, the progress of which it reckoned by days.

Figures of speech are reserved for a separate section; but metaphor and allegory are so much connected, that they must be handled together: the rules particularly for distinguishing the good from the bad, are common to both. We shall therefore proceed to these rules, after adding some examples to illustrate the nature of an allegory. Horace, speaking of his love to Pyrrha, which was now extinguished, expresseth himself thus:

—Me
Again:

Phœbus volentem prælia me loqui,
Viætas et urbes, increpitit lyriá:
Ne parva Tyrthenum per æquor
Vela darem.

Carm. 1. 5. ode 15.

Queen. Great Lords, wise men ne'er fit and wail
their los's,
But clearly seek how to redress their harms.
What though the mast be now blown overboard,
The cable broke, the holding-anchor lost,
And half our sailors swallow'd in the flood?
Yet lives our pilot still. Is't meet, that he
Should leave the helm, and, like a fearful lad,
With tearful eyes add water to the sea,
And give more strength to that which hath too much?
While in his moan the ship splits on the rock,
Which industry and courage might have sav'd?
Ah, what a shame! ah, what a fault were this!

Third part, Henry VI. act 5. sc. 5.

Oroonoko. Ha! thou haft rous'd:
The lion in his den, he stalks abroad,
And the wide forest trembles at his roar,
I find the danger now.

Oroonoko, act 3. sc. 2.

My well beloved hath a vineyard in a very fruitful hill;
He fenced it, gathered out the stones thereof, planted it
with the choicest vine, built a tower in the midst of it,
and also made a wine-press therein: he looked that it
should bring forth grapes, and it brought forth wild
grapes. And now, O inhabitants of Jerusalem, and men
of Judah, judge, I pray you, betwixt me and my vine-
yard. What could have been done more to my vineyard;
that I have not done? Wherefore, when I looked that it
should bring forth grapes, brought it forth wild grapes?
And now go to; I will tell you what I will do to my
vineyard: I will take away the hedge thereof, and it
shall be eaten up; and break down the wall thereof, and
it shall be trodden down. And I will lay it waste: is

H 5
shall not be pruned, nor digged, but there shall come up biers and thorns: I will also command the clouds that they rain no rain upon it. For the vineyard of the Lord of hosts is the house of Israel, and the men of Judah his pleasant plant.  

Isaiah, v. 1.

Figures.

The rules that govern metaphors and allegories, are of two kinds: those of the first kind concern the construction of these figures, and ascertain what are regular and what irregular; those of the other kind concern the propriety or impropriety of introduction, in what circumstances these figures may be admitted, and in what circumstances they are out of place. I begin with rules of the first kind; some of which coincide with those already given with respect to similes; some are peculiar to metaphors and allegories.

And, in the first place, it has been observed, that a simile cannot be agreeable where the resemblance is either too strong or too faint. This holds equally in a metaphor and allegory; and the reason is the same in all. In the following instances, the resemblance is too faint to be agreeable.

Malcolm. — But there's no bottom, none, In my voluptuoshefs: your wives, your daughters, Your matrons, and your maids, could not fill up The cistern of my luft. Macbeth, act 4 sc. 4.

The best way to judge of this metaphor, is to convert it into a simile; which would be bad, because there is scarce any resemblance between luft and a cistern, or betwixt enormous luft and a large cistern.

Again:

He cannot buckle his distemper'd cause
Within the belt of rule. Macbeth, act 5. sc. 2.

There is no resemblance between a distempered cause and any body that can be confined within a belt.

Again:

Steep me in poverty to the very lips. Othello, act 4. sc. 9.

Poverty here must be conceived a fluid, which it resembles not in any manner.

Speaking to Bolingbroke banish'd for six years:

Th
The fullen passage of thy weary steps
Esteem a foil, wherein thou art to set
The precious jewel of thy home return.

Richard II. act 1. sc. 6.

Again:
Here is a letter, lady,
And every word in it a gaping wound
Issuing life-blood. Merchant of Venice, act 3. sc. 3.

Tantæ molis erat Romanam condere gentem.

The following metaphor is strained beyond all endurance: Timur-bec, known to us by the name of Tamerlane the Great, writes to Bajazet Emperor of the Ottomans in the following terms:

Where is the monarch who dares resist us? where is the potentate who doth not glory in being numbered among our attendants? As for thee, descended from a Turcoman sailor, since the vessel of thy unbounded ambition hath been wreck'd in the gulf of thy self love, it would be proper, that thou shouldst take in the sills of thy temerity, and cast the anchor of repentance in the port of sincerity and justice, which is the port of safety; left the tempest of our vengeance make thee perish in the sea of the punishment thou deserv'st.

Such strained figures, as observed above*, are not unfrequent in the first dawn of refinement: the mind in a new enjoyment knows no bounds, and is generally carried to excess, till taste and experience discover the proper limits.

Secondly, Whatever resemblance subjects may have, it is wrong to put one for another, where they bear no mutual proportion: upon comparing a very high to a very low subject, the simile takes on an air of burlesque; and the same will be the effect, where the one is imagined to be the other, as in a metaphor; or made to represent the other, as in an allegory.

Thirdly, These figures, a metaphor especially, ought not to be crowded with many minute circumstances; for in that case it is scarcely possible to avoid obscurity.

* Chap. 19. Comparisons.
Figures. Ch. XX.

A metaphor above all ought to be short: it is difficult during any course of time, to support a lively image of one thing being another; and for that reason, a metaphor drawn out to any length, instead of illustrating or enlivening the principal subject, becomes disagreeable by overstraining the mind. Here Cowley is extremely licentious: take the following instance.

Great and wise conqueror, who where-e'er
Thou com'ft, doth fortify, and settle there!
Who canst defend as well as get;
And never hadst one quarter beat up yet;
Now thou art in, thou ne'er will part
With one inch of my vanquish'd heart;
For since thou took'st it by assault from me,
'Tis garrison'd so strong with thoughts of thee
It fears no beauteous enemy.

For the same reason, however agreeable long allegories may at first be by their novelty, they never afford any lasting pleasure: witness the Fairy Queen, which with great power of expression, variety of images, and melody of versification, is scarce ever read a second time.

In the fourth place, The comparison carried on in a simile, being in a metaphor sunk by imagining the principal subject to be that very thing which it only resembles; an opportunity is furnished to describe it in terms taken strictly or literally with respect to its imagined nature. This suggests another rule. That in constructing a metaphor, the writer ought to confine himself to the simplest expressions, and make use of such words only as are applicable literally to the imagined nature of his subject: figurative words ought carefully to be avoided; for such complicated figures, instead of setting the principal subject in a strong light, involve it in a cloud; and it is well if the reader, without rejecting by the lump, endeavour patiently to gather the plain meaning, regardless of the figures:

A stubborn and unconquerable flame
Creeps in his veins, and drinks the streams of life.

Copied from Ovid,
Sorbent avidæ præcordia flamæ.

Metamorphoses, lib. ix. 172.

Let us analyse this expression. That a fever may be imagined a flame, I admit; though more than one step is necessary to come at the resemblance: a fever, by heating the body, resembles fire; and it is no stretch to imagine a fever to be a fire: again, by a figure of speech, flame may be put for fire, because they are commonly conjoined; and therefore a fever may be termed a flame. But now admitting a fever to be a flame, its effects ought to be explained in words that agree literally to a flame. This rule is not observed here; for a flame drinks figuratively only, not properly.

King Henry to his son Prince Henry:

Thou hid'st a thousand daggers in thy thoughts,
Which thou hast whetted on thy stony heart
To stab at half an hour of my frail life.

Second part, Henry IV. act 4. sc. 11.

Such faulty metaphors are pleasantly ridiculed in the Rehearsal.

Physician Sir, to conclude, the place you fill has more than amply exacted the talents of a wary pilot; and all these threatening storms, which, like impregnate clouds, hover o'er our heads, will, when they once are grasp'd but by the eye of reason, melt into fruitful showers of blessings on the people.

Bayes. Pray mark that allegory. Is not that good?

Johnson. Yes, that grasping of a storm with the eye is admirable.

Fifthly, The jumbling different metaphors in the same sentence, or the beginning with one metaphor and ending with another, commonly called a mixt metaphor, ought never to be indulged. Quintilian bears testimony against it in the bitterest terms: "Nam id quoque in primis est custodiendum, ut quo ex genere ceperes translationis, hoc desinas. Multi enim, cum initium a tempestate sumperunt, incendio aut ruina finiunt: quæ est inconsequentia rerum fœdissima." L. 8. cap. 6. § 2.

K. Henry. ———- Will you again unknit
Ch. XX.

This churlish knot of all-abhorred war,
And move in that obedient orb again,
Where you did give a fair and natural light?

First part, Henry VI. act 5. sc. 1.

Whether 'tis nobler in the mind, to suffer
The stings and arrows of outrageous fortune;
Or to take arms against a sea of troubles,
And by opposing end them. Hamlet, act 3. sc. 2.

In the sixth place, It is unpleasant to join different metaphors in the same period, even where they are preserved distinct: for when the subject is imagined to be first one thing and then another in the same period without interval, the mind is distracted by the rapid transition; and when the imagination is put on such hard duty, its images are too faint to produce any good effect:

At regina gravi jamdudum saucia cura.
Vulnus alit venis, et caeco carpitur igni.

Aeneid. iv. 1.

Eft mollis flamma medullas
Interena, et tacitum vivit sub pectore vulner.

Aeneid. iv. 66.

Motum ex Metello consule civicum,
Bellique causas, et vitia, et modos,
Ludumque fortunae, graveque
Principum amicitias, et arma
Nondum expiatis uncta cruribus,
Periculosa plenum opus ales,
Tractas, et incedis per ignes

In the last place, It is still worse to jumble together metaphorical and natural expression, so as that the period must be understood partly metaphorically, partly literally; for the imagination cannot follow with sufficient ease changes so sudden and unprepared: a metaphor begun and not carried on, hath no beauty; and instead of light there is nothing but obscurity and confusion. Instances of such incorrect composition are without number: I shall, for a specimen, select a few from different authors.

Speaking of Britain,
This precious stone set in the sea,
Which serves it in the office of a wall,
Or as a moat defensive to a house
Against the envy of less happier lands.

Richard II. act 2. sc. 1.

In the first line Britain is figured to be a precious stone: in the following lines, Britain, divested of her metaphorical dress, is presented to the reader in her natural appearance.

These growing feathers pluck'd from Cæsar's wing,
Will make him fly an ordinary pitch,
Who else would soar above the view of men,
And keep us all in servile fearfulness.

Julius Cæsar, act 1. sc. 1:

Rebus angustis animosus atque
Fortis adpare: sapienter idem
Contrahes vento nimium fecundo
Turgida vela.

Hor.

The following is a miserable jumble of expressions, arising from an unsteady view of the subject, between its figurative and natural appearance:

But now from gath'ring clouds destruction pours,
Which ruins with mad rage our halcyon hours:
Mists from black jealousies the tempest form,
Whilst late divisions reinforce the storm.

Dispensary, canto 3.

To thee, the world its present homage pays,
The harvest early, but mature the praise.

Pope's imitation of Horace, b. 2.

Oui, fa pudeur n'est que franche grimace,
Qu'une ombre de vertu qui garde mal la place,
Et qui s'évanouit, comme l'on peut savoir,
Aux rayons du soleil qu'une bouffe fait voir.

Moliere, L'Etourdi, ad 3. sc. 2.

Et son feu, depourvû de sens et de lecture,
S'éteint à chaque pas, faute de nourriture,

Boileau, L'art poétique, chant. 3. l. 319.

Dryden, in his dedication of the translation of Juvenal, says,

When thus, as I may say, before the use of the load-

stone,
stone, or knowledge of the compass, I was failing in a vast ocean, without other help than the pole-star of the antients, and the rules of the French stage among the moderns, &c.

There is a time when factions, by the vehemence of their own fermentation, flun and disable one another.

Bolingbroke.

This fault of jumbling the figure and plain expression into one confused mass, is not less common in allegory than in metaphor. Take the following examples.

Heu! quotes fidem,

Mutatosque Deos flebit, et aspera,

Nigris æquora ventis

Æmirabitur infolens,

Qui nunc te fruiatur credulus aurea.

Qui semper vacuum, semper amabilem

Sperat, nescius aure

Pour moi sur cette mer, qu’ici bas nous courons,

Je songe à me pourvoir d’efquif et d’avirons,

A regler mes defirs, à prévenir l’orage,

Et sauver, s’il se peut, ma Raison du naufragé.

Boileau, epitre 5.

Lord Halifax, speaking of the antient fabulists: "They (says he) wrote in signs and spoke in parables: all their fables carry a double meaning: the story is one and entire; the characters the same throughout; not broken or changed, and always conformable to the nature of the creature they introduce. They never tell you, that the dog which snapp’d at a shadow, lost his troop of horse, that would be unintelligible. This is his (Dryden's) new way of telling a story, and confounding the moral and the fable together." After instancing from the hind and panther, he goes on thus: "What relation has the hind to our Saviour? or what notion have we of a panther's Bible? If you say, he means the church, how does the church feed on lawns, or range in the forest? Let it be always a church or always a cloven-footed beast, for we cannot bear his shifting the scene every line."

A few words more upon allegory. Nothing gives greater...
greater pleasure than this figure, when the representative subject bears a strong analogy, in all its circumstances, to that which is represented: but the choice is seldom so lucky: the analogy being generally so faint and obscure, as to puzzle and not please. An allegory is still more difficult in painting than in poetry: the former can show no resemblance but what appears to the eye; the latter hath many other resources for showing the resemblance. And therefore, with respect to what the Abbé du Bos* terms mixt allegorical compositions, these may do in poetry, because, in writing, the allegory can easily be distinguished from the historical part; no person, for example, mistakes Virgil's Fame for a real being: but such a mixture in a picture is intolerable; because in a picture the objects must appear all of the same kind, wholly real or wholly emblematical. For that reason, the history of Mary de Medicis in the palace of Luxembourg, painted by Rubens, is unpleasant by a perpetual jumble of real and allegorical personages, which produce a discordance of parts, and an obscurity upon the whole: witness, in particular, the tablature representing the arrival of Mary de Medicis at Marseilles, where, together with the real personages, the Nereids and Tritons appear founding their shells: such a mixture of fiction and reality in the same group, is strangely absurd. The picture of Alexander and Roxana, described by Lucian, is gay and fanciful; but it suffers by the allegorical figures. It is not in the wit of man to invent an allegorical representation deviating farther from any appearance of resemblance, than one exhibited by Lewis XIV. anno 1664; in which an overgrown chariot, intended to represent that of the sun, is dragged along, surrounded with men and women, representing the four ages of the world, the celestial signs, the seasons, the hours, &c.; a monstrous composition, and yet scarcely more absurd than Guido's tablature of Aurora.

In an allegory, as well as in a metaphor, terms ought to be chosen that properly and literally are applicable to the representative subject: nor ought any circumstance to be added that is not proper to the representative

---

Figures.

CH. XX.

Tive subject, however justly it may be applicable properly or figuratively to the principal. Upon that account the following allegory is faulty.

Ferus et Cupido,
Semper ardentes acuens sagittas
Cote cruentā.

- Horat. 1. 2. ode 8.

For though blood may suggest the cruelty of love, it is an improper or immaterial circumstance in the representative subject: water, not blood, is proper for a whetstone.

We proceed to the next head, which is, to examine in what circumstances these figures are proper, in what improper. This inquiry is not altogether superseded by what is said upon the same subject in the chapter of comparisons; because, upon trial it will be found, that a short metaphor or allegory may be proper, where a simile, drawn out to a greater length and in its nature more solemn, would scarce be relished.

And, in the first place, a metaphor, like a simile, is excluded from common conversation, and from the description of ordinary incidents.

In the next place, in expressing any severe passion that totally occupies the mind, metaphor is unnatural. For which reason, we must condemn the following speech of Macbeth:

Methought I heard a voice cry, Sleep no more! Macbeth doth murder sleep; the innocent sleep; Sleep that knits up the ravelled sleeve of Care,
The birth of each day’s life, sore Labour’s bath, Balm of hurt minds, great Nature’s second course, Chief nourisher in Life’s feast —

Act 2. sc. 3.

The next example, of deep despair, beside the highly figurative style, hath more the air of raving than of sense:

Calista. Is it the voice of thunder, or my father? Madness! Confusion! let the storm come on, Let the tumultuous roar drive all upon me, DaA my devoted bark: ye surges, break it; "Tis for my ruin that the tempest rises, When I am lost, sunk to the bottom low, Peace shall return, and all be calm again.

Fair Penitent, act 4.
The metaphor I next introduce, is sweet and lively, but it suits not the fiery temper of Chamont, inflamed with passion: parables are not the language of wrath venting itself without restraint:

Chamont. You took her up a little tender flower, just sprouted on a bank, which the next frost had nip’d; and with a careful loving hand, transplanted her into your own fair garden, where the sun always shines: there long she flourish’d, grew sweet to sense and lovely to the eye, till at the last a cruel spoiler came, cropt this fair rose, and rifled all its sweetness, then cast it like a loathsome weed away.

Orphan, act 4.

The following speech, full of imagery, is not natural in grief and dejection of mind.

Gonzalez. O my son! from the blind dotage of a father’s fondness these ills arose. For thee I’ve been ambitious, base and bloody; for thee I’ve plung’d into this sea of sin; stemming the tide with only one weak hand, while tother bore the crown, (to wreath thy brow), whose weight has sunk me ere I reach’d the shore.

Mourning Bride, act 5. sc 6.

There is an enchanting picture of deep distress in Macbeth *, where Macduff is represented lamenting his wife and children, inhumanly murdered by the tyrant. Stung to the heart with the news, he questions the messenger over and over: not that he doubted the fact, but that his heart revolted against so cruel a misfortune. After struggling some time with his grief, he turns from his wife and children to their savage butcher; and then gives vent to his resentment, but still with manliness and dignity:

O, I could play the woman with mine eyes, and braggart with my tongue. But, gentle Heav’n! cut short all intermission; front to front bring thou this fiend of Scotland and myself; within my sword’s length set him —— if he scape, then Heav’n forgive him too.

* Act 4. sc. 6.
The whole scene is a delicious picture of human nature. One expression only seems doubtful: in examining the messenger, Macduff expresses himself thus:

He hath no children — all my pretty ones!
Did you say, all? what, all? Oh, hell-kite! all?
What! all my pretty little chickens and their dam,
At one fell swoop!

Metaphorical expression, I am sensible, may sometimes be used with grace where a regular simile would be intolerable: but there are situations so severe and dispiriting, as not to admit even the slightest metaphor. It requires great delicacy of taste to determine with firmness, whether the present case be of that nature: I incline to think it is; and yet I would not willingly alter a single word of this admirable scene.

But metaphorical language is proper when a man struggles to bear with dignity or decency a misfortune however great: the struggle agitates and animates the mind:

Wolsey. Farewell, a long farewell, to all my greatness!
This is the state of man; to-day he puts forth
The tender leaves of hope; to-morrow blossoms,
And bears his blushing honours thick upon him;
The third day comes a frost, a killing frost,
And when he thinks, good easy man, full surely
His greatness is a ripening, nips his root,
And then he falls as I do. Henry VIII. act 3. sc. 6;

SEC. VII. Figure of Speech.

In the section immediately foregoing, a figure of speech is defined, "The using a word in a sense different from what is proper to it," and the new or uncommon sense of the word is termed the figurative sense. The figurative sense must have a relation to that which is proper; and the more intimate the relation is, the figure is the more happy. How ornamental this figure is to language, will not be readily imagined by any one who hath not given peculiar attention; and therefore I shall endeavour to unfold its capital beauties and advantages. In the first place, a word used figuratively, or in a new sense, suggests at the same time the sense.
it commonly bears; and thus it has the effect to present two objects; one signified by the figurative sense, which may be termed the principal object; and one signified by the proper sense, which may be termed accessory: the principal makes a part of the thought; the accessory is merely ornamental. In this respect, a figure of speech is precisely similar to concordant sounds in music, which, without contributing to the melody, make it harmonious. I explain myself by examples. Youth, by a figure of speech, is termed the morning of life: this expression signifies youth, the principal object, which enters into the thought; it suggests, at the same time, the proper sense of morning; and this accessory object, being in itself beautiful, and connected by resemblance to the principal object, is not a little ornamental. Imperious ocean is an example of a different kind, where an attribute is expressed figuratively: together with stormy, the figurative meaning of the epithet imperious, there is suggested its proper meaning, viz. the stern authority of a despotic prince; and these two are strongly connected by resemblance. Upon this figurative power of words, Vida descants with great elegance:

Nonne vides, verbis ut veris sæpe relictis
Accerfant simulata, aliundeque nomina porro
Transportent, aptentque aliis ea rebus; ut ipsæ,
Exuviasque novas, res, insolitosque colores.
Indutaæ, sæpe externi mirentur amictus
Unde illi, lactæque aliena luce fruantur,
Mutatoque habitu, nec jam sua nomina mallent?
Sæpe ideo, cum bella canunt, incendia cædas
Cernere, diluviumque ingens surgentibus undis.
Contra etiam Martis pugnas imitabitur ignis,
Cum furt accensis acies Vulcania campis.
Nec turbato oritur quondam minor aequore pugna:
Confligunt animosi Euri certamine vaflo
Inter le, pugnanteque adversis molibus undæ.
Usque adeo paßim sua res insignia lææ
Permutantque, juvantque vicellim; et mutua sææ
Altera in alterius transformat protinus ora.
Turn specie capi gaudent spectare legentes:
Nam diversa simul datur è re cernere eadem
Multarum
Figures.

Multarum simulacra animo subeuntia rerum.
Poet. lib. 3. l. 44.

In the next place, this figure possesses a signal power of aggrandizing an object, by the following means. Words, which have no original beauty but what arises from their sound, acquire an adventitious beauty from their meaning: a word signifying any thing that is agreeable, becomes by that means agreeable; for the agreeableness of the object is communicated to its name. This acquired beauty, by the force of custom, adheres to the word even when used figuratively; and the beauty received from the thing it properly signifies, is communicated to the thing which it is made to signify figuratively. Consider the foregoing expression Imperious ocean, how much more elevated it is than Stormy ocean.

Thirdly. This figure hath a happy effect by preventing the familiarity of proper names. The familiarity of a proper name, is communicated to the thing it signifies by means of their intimate connection; and the thing is thereby brought down in our feeling. This bad effect is prevented by using a figurative word instead of one that is proper; as, for example, when we express the sky by terming it the blue vault of heaven; for though no work of art can compare with the sky in magnificence, the expression however must be relished, because it prevents the object from being brought down by the familiarity of its proper name. With respect to the degrading familiarity of proper names, Vida has the following passage.

Hinc si dura mihi passus dicendus Ulysses,
Non illum vero membrabo nomine, sed qui
Et mores hominum multorum vidit, et urbes,

Nausfragus

* See chap. 2. part 1. sect. 5.

† I have often regretted, that a factious spirit of opposition to the reigning family makes it necessary in public worship to distinguish the King by his proper name. One will scarce imagine, who has not made the trial, how much better it sounds to pray for our Sovereign Lord the King, without any addition.
Naufragus everfa post faeva incendia Trojæ.

Poet. lib. 2. 1. 46.

Lastly, By this figure language is enriched, and rendered more copious; in which respect, were there no other, a figure of speech is a happy invention. This property is finely touched by Vida:

Quinetiam agricultas ea sando nota voluptas
Exercet, dum lata teges, dum trudere gemmas
Incipient vites, scientiisque ætheris imbrem
Prata bibunt, ridentque fatis furgentibus agri,
Hanc vulgo speciem propriæ penuria vocis
Intulit, indicisque urgens in rebus egeilas.
Quippe ubi se vera ostendebant nomina nusquam,
Fas erat hinc atque hinc transferre simillima veris.

Poet. lib. 3. 1. 90.

The beauties I have mentioned belong to every figure of speech. Several other beauties peculiar to one or other sort, I shall have occasion to remark afterward.

Not only subjects, but qualities, actions, effects, may be expressed figuratively. Thus, as to subjects, the gates of breath for the lips, the watery kingdom for the ocean. As to qualities, fierce for stormy, in the expression Fierce winter; altus for profundus, altus puteus, Altum mare; breathing for perspiring, Breathing plants. Again, as to actions, The sea rages, Time will melt her frozen thoughts, Time kills grief. An effect is put for the cause, as lux for the sun; and a cause for the effect, as bourn labores for corn. The relation of resemblance is one plentiful source of figures of speech; and nothing is more common than to apply to one object the name of another that resembles it in any respect: height, size, and worldly greatness, though in themselves they have no resemblance, produce emotions in the mind that have a resemblance; and, led by that resemblance, we naturally express worldly greatness by height or size: one feels a certain uneasiness in looking down to a great depth; and hence depth is made to express any thing disagreeable by excels, as depth of grief, depth of despair: again, height of place, and time long past, produce similar feelings; and hence the expression, Ut altius repetam: distance in past time, producing a strong feeling,
feeling, is put for any strong feeling, *Nihil mihi antiquus nostra amicitia*: shortness with relation to space, for shortness with relation to time, *Brevis esse laboro, obscurus sero*: suffering a punishment resembles paying a debt; hence *pendere pænas*. Upon the same account, light may be put for glory, sun-shine for prosperity, and weight for importance.

Many words, originally figurative, having, by long and constant use, lost their figurative power, are degraded to the inferior rank of proper terms. Thus the words that express the operations of the mind, have in all languages been originally figurative: the reason holds in all, that when these operations came first under consideration, there was no other way of describing them but by what they resembled: it was not practicable to give them proper names, as may be done to objects that can be ascertained by sight and touch. A soft nature, jarring tempers, weight of woe, pompous phrase, beget compallion, assuage grief, break a vow, bend the eye downward, bow'er down curles, drown'd in tears, wrap't in joy, warm'd with eloquence, load'd with spoils, and a thousand other expressions of the like nature, have lost their figurative sense. Some terms there are, that cannot be said to be either altogether figurative or altogether proper: originally figurative, they are tending to simplicity, without having lost altogether their figurative power. Virgil's *Regina saucia cura*, is perhaps one of these expressions: with ordinary readers, saucia will be considered as expressing simply the effect of grief; but one of a lively imagination will exalt the phrase into a figure.

For epitomising this subject, and at the same time for giving a clear view of it, I cannot think of a better method, than to present to the reader a list of the several relations upon which figures of speech are commonly founded. This list I divide into two tables; one of subjects expressed figuratively, and one of attributes.

**FIRST TABLE.**

**Subjects expressed figuratively.**

1. A word proper to one subject employ'd figuratively to express a resembling subject.
There is no figure of speech so frequent, as what is derived from the relation of resemblance. Youth, for example, is signified figuratively by the morning of life. The life of a man resembles a natural day in several particulars: the morning is the beginning of day, youth the beginning of life; the morning is cheerful, so is youth, &c. By another resemblance, a bold warrior is termed the thunderbolt of war; a multitude of troubles, a sea of troubles.

At the same time, this figure, above all others, affords pleasure to the mind by variety of beauties. Beside the beauties above mentioned common to all sorts, it possesthes in particular the beauty of a metaphor or of a simile: a figure of speech built upon resemblance, suggests always a comparison between the principal subject and the accessory; whereby every good effect of a metaphor or simile, may in a short and lively manner, be produced by this figure of speech.

2. A word proper to the effect employ'd figuratively to express the cause.

Lux for the sun. Shadow for cloud. A helmet is signified by the expression glittering terror. A tree by shadow or umbrage. Hence the expression:

Nec habet Pelion umbras. Ovid.

Where the dun umbrage hangs. Spring, l. 1023.

A wound is made to signify an arrow:

Vulnere non pedibus te consequar. Ovid.

There is a peculiar force and beauty in this figure: the word which signifies figuratively the principal subject, denotes it to be a cause by suggesting the effect.

3. A word proper to the cause, employ'd figuratively to express the effect.

Boumque labores for corn. Sorrow or grief for tears.
Again Ulysses veil'd his pensive head,
Again unmanna'd, a show'r of sorrow shed.
Streaming Grief his faded cheek bedew'd.

Blindness for darkness:
Cæcis erramus in undis. Æneid, iii. 200.

There is a peculiar energy in this figure, similar to
that in the former: the figurative name denotes the subject to be an effect, by suggesting its cause.

4. Two things being intimately connected, the proper name of the one employ'd figuratively to signify the other.

*Day* for light. *Night* for darkness; and hence, *A sudden night.* *Winter* for a storm at sea:

Inter ea magno miseri murme rum pontum,  
Emi ilamque Hyemem sensit Neptunus.

Æneid. i. 128.

This last figure would be too bold for a British writer, as a storm at sea is not inseparably connected with winter in this climate.

5. A word proper to an attribute, employ'd figuratively to denote the subject.

*Youth* and *beauty* for those who are young and beautiful:

Youth and beauty shall be laid in dust.

*Majesty* for the King:

What art thou, that usurp'lt this time of night,  
Together with that fair and warlike form,  
In which the Majesty of buried Denmark  
Did sometime march?  

Hamlet, act i. sc. 1.

Or have ye chosen this place  
After the toils of battle, to repose  
Your weary'd virtue?  
Verdure for a green field.

Paradise lost.  
Summer, l. 301.

Speaking of cranes,  
To pigmy nations wounds and death they bring,  
And all the war descends upon the wing.

Iliad iii. 10.

Cool age advances venerably wise;  
Iliad iii. 149.

The peculiar beauty of this figure arises from suggesting an attribute that embellishes the subject, or puts it in a stronger light.

6. A complex term employ'd figuratively to denote one of the component parts.

*Funus* for a dead body. *Burial* for a grave.

7. The
7. The name of one of the component parts instead of the complex term.

Tara for a marriage. The East for a country situated east from us. Jovis vestigia servat, for imitating Jupiter in general.

8. A word signifying time or place, employ'd figuratively to denote what is connected with it.

Clime for a nation, or for a constitution of government: hence the expression, Merciful clime, Fleecy winter for snow, Seculum felix.

9. A part for the whole.

The pole for the earth. The head for the person:

Triginta minas pro capite tuo dedi. Plautus.

Tergum for the man:

Fugiens tergum. Ovid.

Vultus for the man:

Jam fulgor armorum fugaces
Terret equos, equitumque vultus. Horat.

Quis defiderio sit pudor aut modus
Tam chari capitis? Horat.

Dumque vigent genua? Horat.

Thy growing virtues justify'd my cares,
And promis'd comfort to my silver hairs.

Iliad ix. 616.

Forthwith from the pool he rears
His mighty feature. Paradise lost.

The silent heart which grief affails. Parnell.

The peculiar beauty of this figure consists in marking that part which makes the greatest figure.

10. The name of the container, employ'd figuratively to signify what is contained.

11. The name of the sustainer, employ'd figuratively to signify what is sustained.

I 2
Altar for the sacrifice. Field for the battle fought upon it, Well-fought field.

12. The name of the materials, employ'd figuratively to signify the things made of them.

Ferrum for gladius.

13. The names of the Heathen deities, employ'd figuratively to signify what they patronise.

Jove for the air, Mars for war, Venus for beauty, Cupid for love, Ceres for corn, Neptune for the sea, Vulcan for fire.

This figure bestows great elevation upon the subject; and therefore ought to be confined to the higher strains of poetry.

SECOND TABLE.

Attributes expressed figuratively.

When two attributes are connected, the name of the one may be employ'd figuratively to express the other.

Purity and virginity are attributes of the same person: hence the expression, Virgin snow, for pure snow.

2. A word signifying properly an attribute of one subject, employ'd figuratively to express a resembling attribute of another subject.

Tottering state. Imperious ocean. Angry flood.

Raging tempest. Shallow fears.

My sure divinity shall bear the shield,
And edge thy sword to reap the glorious field.

Odyssey xx. 61.

Black omen, for an omen that portends bad fortune.

Ater odor.

Virgil.

The peculiar beauty of this figure arises from suggesting a comparison.

3. A word proper to the subject, employ'd to express one of its attributes.

Mens for intellectus. Mens for a resolution:

Islam, oro, exue mentem.

4. When two subjects have a resemblance by a com
Figures.

mon quality, the name of the one subject may be employed figuratively to denote that quality in the other.

Summer life, for agreeable life.

5. The name of the instrument made to signify the power of employing it.

—— Melpomene, cui liquidam pater
Vocem cum cithara dedit.

The ample field of figurative expression displayed in these tables, affords great scope for reasoning. Several of the observations relating to metaphor, are applicable to figures of speech: these I shall slightly retouch, with some additions peculiarly adapted to the present subject.

In the first place, as the figure under consideration is built upon relation, we find from experience, and it must be obvious from reason, that the beauty of the figure depends on the intimacy of the relation between the figurative and proper sense of the word. A slight remembrance, in particular, will never make this figure agreeable: the expression, for example, Drink down a secret, for listening to a secret with attention, is harsh and uncouth, because there is scarce any resemblance between listening and drinking. The expression weighty crack, used by Ben Johnson for loud crack, is worse if possible: a loud sound has not the slightest resemblance to a piece of matter that is weighty. The following expression of Lucretius is not less faulty, “Et lepida quae sunt fucata sonore.” i. 645.

—— Sed magis
Pugnas et exactos tyrannos
Denfum humeris babit aure vulgus,

Horat. Carm. l. 2. ode 13.

Phemius! let acts of gods, and heroes old,
What antient bards in hall and bow'r have told,
Attemper'd to the lyre, your voice employ,
Such the pleas'd ear will drink with silent joy.

Odyssey, i. 433.

Strepitumque exterritus haust.

Aeneid vi. 559.

—— Write, my Queen,
And with mine eyes I'll drink the words you send.

Cymbeline, act 1. sc. 2.
As thus th’effulgence tremulous I drink.

Summer, l. 1684:

Neque audit currus habenas. Georg, i. 514.

O Prince! (Lycaon’s valiant son reply’d),
As thine the steeds, be thine the task to guide.
The horses practis’d to their lord’s command,
Shall bear the rein, and answer to thy hand.

Hiad v. 288.

The following figures of speech seem altogether wild and extravagant, the figurative and proper meanings having no connection whatever. Moving softness, Fiesh-nefs breathes, Breathing prospect, Flowing spring, Dewy light, Lucid coolness, and many others of this false coin may be found in Thomson’s Seasons.

Secondly, The proper sense of the word ought to bear some proportion to the figurative sense, and not soar much above it, nor sink much below it. This rule, as well as the foregoing, is finely illustrated by Vida:

Hac adeo cum sint, cum fas audere poetis
Multa modis multis; tamen observare memento,
Si quando haud propriis rem mavis dicere verbis,
Tranflatitque aliunde notis, longeque petitis,
Ne nimiam ostendas, quaerendo talia, curam.
Namque aliqui exercent vim duram, et rebus iniœ
Nativam eripiunt formam, indignantibus ipsis,
Invitatique jubent alienos fumeie vulitus.
Haud magis imprudens mihi erit, et luminis expers,
Qui puero ingentes habitus det ferre gigantis,
Quam siquis itabula alta lares appellet equinos,
Aut crines magnae genetricis gramina dicat.

Poet. iii. 148.

Thirdly, In a figure of speech, every circumstance ought to be avoided that agrees with the proper sense only, not the figurative sense; for it is the latter that expresses the thought, and the former serves for no other purpose but to make harmony:

Zacynthus green with ever shady groves,
And Ithaca, presumptuous boast their loves;
Obtruding on my choice a second lord,
They presd the Hymenean rite abhorrd.
Zacynthus here standing figuratively for the inhabitants, the description of the island is quite out of place: it puzzles the reader, by making him doubt whether the word ought to be taken in its proper or figurative sense.

---

Write, my Queen,
And with mine eyes I'll drink the words you send,
Though ink be made of gall. Cymbeline, act 1. sc. 2.
The disgust one has to drink ink in reality, is not to the purpose where the subject is drinking ink figuratively.

In the fourth place, To draw consequences from a figure of speech, as if the word were to be understood literally, is a gross absurdity, for it is confounding truth with fiction:

Be Moubray's sins so heavy in his bosom,
That they may break his foaming courser's back,
And throw the rider headlong in the lifts,
A caitiff recreant to my cousin Hereford.

Richard II. act 1. sc. 3.

Sin may be imagined heavy in a figurative sense: but weight in a proper sense belongs to the accessory only; and therefore to describe the effects of weight, is to desert the principal subject, and to convert the accessory into a principal:

Cromwell. How does your Grace?
Wolsey. Why, well;
Never so truly happy, my good Cromwell.
I know myself now, and I feel within me
A peace above all earthly dignities,
A still and quiet conscience. The King has cur'd me,
I humbly thank his Grace; and, from these shoulders,
These ruin'd pillars, out of pity, taken
A load would sink a navy, too much honour.

Henry VIII. act 3. sc. 6.

Ulysses speaking of Hector:
I wonder now how yonder city stands,
When we have here the base and pillar by us.

Troylus and Cressida, act 4. sc. 9.

Othello. No; my heart is turn'd to stone: I strike it, and it hurts my hand.

Othello, act 4. sc. 5.
Not less, even in this despicable now,
Than when my name fill'd Afric with affrights,
And froze your hearts beneath your torrid zone.
          Don Sebastian King of Portugal, act 1.
How long a space, since first I lov'd, it is!
To look into a glass I fear,
And am surpris'd with wonder, when I mis,
Grey hairs and wrinkles there.
I chose the flourishing't tree in all the park,
With freshest boughs, and fairest head;
I cut my love into its gentle bark,
And in three days behold 'tis dead;
My very written flames so violent be,
They've burnt and wither'd up the tree.
Ah, mighty Love, that it were inward heat
Which made this precious limbeck sweat!
But what, alas! ah what does it avail
That she weeps tears so wond'rous cold,
As scarce the afs's hoof can hold,
So cold, that I admire they fall not hail.
Such a play of words is pleasent in a ludicrous poem.
          Almeria. Alphonso, O Alphonso!
Devouring seas have wash'd thee from my sight,
No time shall raise thee from my memory;
No, I will live to be thy monument:
The cruel ocean is no more thy tomb;
But in my heart thou art interr'd.
          Mourning Bride, act 1. sc. 1.
This would be very right, if there were any inconsistence, in being interred in one place really, and in another place figuratively.
          Je crains que cette saison
Ne nous amene la peste;
La gueule du chien celeste
Vomit feu fur l'horizon.
Afin que je m'en delivre;
Je veux lire ton gros livre
Jusques au dernier feuillette:
Tout ce que ta plume trace,
Robinet, a de la glace
A fair trembler Juillet.

In me tota ruens Venus

From considering that a word used in a figurative sense suggests at the same time its proper meaning, we discover a fifth rule, That we ought not to employ a word in a figurative sense, the proper sense of which is inconsistent or incongruous with the subject: for every inconsistency, and even incongruity, though in the expression only and not real, is unpleasant:

Interea genitor Tyberini ad fluminis undam
Vulnora fuccabat lymphis—— Æneid. x. 833.

Tres adeo incertos ceca caligine soles
Erramus pelago, totidem fine sidere noctes.
Æneid. iii. 203.

The foregoing rule may be extended to form a sixth, That no epithet ought to be given to the figurative sense of a word that agrees not also with its proper sense:

——— Dicat Opuntiae
Frater Megillae, quo beatus

Parcus deorum cultor, et infrequens,
Insanientis dum sapientiae
Consultus erro. Horat. Carm. l. 1. ode 34.

Seventhly, The crowding into one period or thought different figures of speech, is not less faulty than crowding metaphors in that manner: the mind is distracted in the quick transition from one image to another, and is puzzled instead of being pleased:

I am of ladies most deject and wretched,
That suck’d the honey of his music-vows. Hamlet:

My bleeding bosom sickens at the found.

——— Ah miser,
Quantâ laboras in Charybdi!
Digne puer meliore flammat.
Quae saga, quis te solvere Theffalís
Magus venenis, quis poterit deus?

I 5
Figures.

Vix illigatum te triformi
Pegasus expedit Chimærā.

Horat. Carm. lib. i. ode 27.

Eighthly, If crowding figures be bad, it is still worse to graft one figure upon another: For instance, While his keen falchion drinks the warriors lives.

Iliad xi. 211.

A falchion drinking the warriors blood is a figure built upon resemblance, which is passable. But then in the expression, lives is again put for blood; and by thus grafting one figure upon another, the expression is rendered obscure and unpleasant.

Ninthly, Intricate and involved figures, that can scarce be analysed, or reduced to plain language, are least of all tolerable:

Votis incendimus aras. Aeneid. iii. 279.

Vulcan to the Cyclopes:
Arma acri facienda viro: nunc viribus usus,
Nunc manibus rapidis, omni nunc arte magistra:
Præcipitate moras. Aeneid. viii. 441.
— Huic gladio, perque aerea suta
Per tunicam squalentem auro, latus haurit apertum. Aeneid. x. 313.

Semotique prius tarda necessitas
Lethi, corripuit gradum.

Horat. Carm. lib. i. ode 3.
Scribis Vario fortis, et hostium

Else shall our fates be number'd with the dead.
Iliad. v. 294.

Commutual death the fate of war confounds.
Iliad viii. 85. and xi. 117.

Speaking of Proteus,
Instant he wears, elusive of the rape,
The mimic force of every savage shape.

Odyssey iv. 563.

Rolling
Rolling convulsive on the floor, is seen
The piteous object of a prostrate Queen.  
Ibid. iv. 952.

The mingling tempest weaves its gloom.  
Autumn, 337.

A various sweetness swells the gentle race.  
Ibid. 640.

A sober calm fleeces unbounded æther.  
Ibid. 967.

The distant water-fall swells in the breeze.  
Winter, 738.

In the tenth place, When a subject is introduced by its proper name, it is absurd to attribute to it the properties of a different subject to which the word is sometimes apply'd in a figurative sense:

Hear me, oh Neptune! thou whose arms are hurl'd
From shore to shore, and gird the solid world.  
Odyssy, ix. 617.

Neptune is here introduced personally, and not figuratively for the ocean: the description therefore, which is only applicable to the latter, is altogether improper.

It is not sufficient, that a figure of speech be regularly constructed, and be free from blemish: it requires taste to discern when it is proper when improper; and taste, I suspect, is our only guide. One however may gather from reflection and experience, that ornaments and graces suit not any of the dispiriting passions, nor are proper for expressing any thing grave and important. In familiar conversation, they are in some measure ridiculous: Prospero, in the Tempest, speaking to his daughter Miranda, says,

The fringed curtains of thine eyes advance,  
And say what thou seest yond.

No exception can be taken to the justness of the figure; and circumstances may be imagined to make it proper: but it is certainly not proper in familiar conversation.

In the last place, Though figures of speech have a charming effect when accurately constructed and properly introduced, they ought however to be scattered with a sparing hand: nothing is more luscious, and no-
thing consequently more satiating, than redundant ornamental of any kind.

CHAP. XXI:

NARRATION AND DESCRIPTION.

HORACE, and many critics after him, exhort writers to choose a subject adapted to their genius. Such peculiarities would multiply rules of criticism without end; and at any rate belong not to the present work, the object of which is human nature in general, and what is common to the species. But though the choice of a subject comes not under such a plan, the manner of execution comes under it; because the manner of execution is subjected to general rules, derived from principles common to the species. These rules, as they concern the things expressed as well as the language or expression, require a division of this chapter into two parts; first of thoughts, and next of words. I pretend not to justify this division as entirely accurate: for in discoursing of thoughts, it is difficult to abstract altogether from words; and still more difficult, in discoursing of words, to abstract altogether from thought.

The first rule is, That in history, the reflections ought to be chaste and solid; for while the mind is intent upon truth, it is little disposed to the operations of the imagination. Strada’s Belgic history is full of poetical images, which, being discordant with the subject, are unpleasing; and they have a still worse effect, by giving an air of fiction to a genuine history. Such flowers ought to be scattered with a sparing hand, even in epic poetry; and at no rate are they proper, till the reader be warmed, and by an enlivened imagination be prepared to relish them: in that state of mind, they are extremely agreeable; but while we are sedate and attentive to an historical chain of facts, we reject with disdain every fiction. This Belgic history is indeed woefully vicious both in matter and in form: it is stuffed with frigid and unmeaning reflections; and its poetical flashes, even laying aside their impropriety, are mere tinsel.

Secondly,
Secondly, Vida *, following Horace, recommends a modest commencement of an epic poem; giving for a reason, That the writer ought to husband his fire. This reason has weight; but what is said above suggests a reason still more weighty: bold thoughts and figures are never relished till the mind be heated and thoroughly engaged, which is not the reader's case at the commencement. Homer introduces not a single simile in the first book of the Iliad, nor in the first book of the Odyssey. On the other hand, Shakespeare begins one of his plays with a sentiment too bold for the most heated imagination:

_Bedford._ Hung be the heav'ns with black, yield day to night!

Comets, importing change of times and states,
Brandish your crystal tresses in the sky;
And with them scourge the bad revolting stars,
That have consented unto Henry's death!

Henry the Fifth, too famous to live long!
England ne'er lost a king of so much worth.

_Firſt part, Henry VI._

The passage with which Strada begins his history, is too poetical for a subject of that kind; and at any rate too high for the beginning of a grave performance. A third reason ought to have not less influence than either of the former, That a man who, upon his first appearance, strains to make a figure, is too ostentatious to be relished. Hence the first sentences of a work ought to be short, natural, and simple. Cicero, in his oration _pro Archia poeta_, errs against that rule: his reader is out of breath at the very first period; which seems never to end. Burnet begins the history of his own times with a period long and intricate.

A third rule or observation is, That where the subject is intended for entertainment solely, not for instruction, a thing ought to be described as it appears, not as it is in reality. In running, for example, the impulse upon the ground is proportioned in some degree to the celerity of motion; though in appearance it is otherwise,

* Poet. lib. 2. l. 30.
otherwise, for a person in swift motion seems to skim the ground, and scarcely to touch it. Virgil, with great taste, describes quick running according to its appearance; and thereby raises an image far more lively, than it could have been by adhering scrupulously to truth:

_Hos super advenit Volscia de gente Camilla,
Agmen agens equitum et florentesAre catervas,
Bellatrix: non illa colo calathifve Minervae
Pœmineas afflueta manus; sed prælia virgo
Dura pati, cursuque pedum prævertere ventos.
Illa vel intactæ segetis per summa volaret
Gramina: nec tenebras cursu laetifet aristas:
Vel mare per medium, fluctu suspenfa tumentis;
Ferret iter; celeres nec tingeret æquore plantas._

*Aeneid. vii. 803.*

This example is copied by the author of _Telemachus_:

Les Brutiens sont legeres à la course comme les cerfs, et comme les daims. On croiroit que l’herbe même la plus tendre n’est point foulée sous leurs pieds; à peine laissent ils dans le fable quelques traces de leurs pas.

_Liv. 10._

Again:

_Déjà il avoit abattu Euflas si léger à la course, qu’à peine il imprimoit la trace des ses pas dans le fable, et qui devancoit dans son pay les plus rapides flors de l’Eurotas et de l’Alphée._

_Liv. 20._

Forthly, In narration as well as in description, objects ought to be painted so accurately as to form in the mind of the reader distinct and lively images. Every useless circumstance ought indeed to be suppressed, because every such circumstance loads the narration; but if a circumstance be necessary, however slight, it cannot be described too minutely. The force of language consists in raising complete images*; which have the effect to transport the reader as by magic into the very place of the important action, and to convert him as it were into a spectator, beholding every thing that passes. The narrative in an epic poem ought to rival a picture in the liveliness and accuracy of its representations: no circumstance

* Chap. 2. part i. sect. 7.
circumstance must be omitted that tends to make a complete image; because an imperfect image, as well as any other imperfect conception, is cold and uninteresting. I shall illustrate this rule by several examples, giving the first place to a beautiful passage from Virgil:

Qualis populea macrens Philomela sub umbrâ
Amillos queriturn leatus, quos durus arator,
Observans nido implumes detraxit.

Georg. lib. 4. l. 511.
The poplar, plowman, and unfledged swallows, though not essential in the description, are circumstances that tend to make a complete image, and upon that account are an embellishment.

Again:

Hic viridem Æneas frondenti ex ilico metam
Constituit, signum nautis.Æneid. v. 129.

Horace, addressing to Fortune:

Te pauper ambit follicita prece
Ruris colonus: te dominam æquoris,
Quicumque Bithynâ lacefsit
Carpathium pelagus carinâ.

Carm. lib. i. ode 35.

— Illum ex menibus hoslicis
Matrona bellantis tyranni
Prosiciens, et adulta virgo,
Suspiret: Eheu, ne rudis agminum
Sponius laceflat regius asperum
Taœtu Leonem, quem cruenta
Per medias rapit ira cedes. Carm. lib. 3. ode 2.
Shakespear says*, "You may as well go about to "turn the sun to ice by fanning in his face with a pea- "cock's feather." The peacock's feather, not to men- tion the beauty of the object, completes the image; an accurate image cannot be formed of that fanciful ope- ration, without conceiving a particular feather; and one is at a loss when this is neglected in the description.

Again, "The rogues flighted me into the river with as "little remorse, as they would have drown'd a bitch's "blind puppies, fifteen i' th' litter †."

Old Lady.

* Henry V. act 4. sc. 4.
† Merry Wives of Windsor, act 3. sc. 15.
Old Lady. You would not be a queen?

Anne. No, not for all the riches under heaven.

Old Lady. 'Tis strange: a three-pence bow'd would hire me, old as I am, to queen it.

Henry VIII. act 2. sc. 5.

In the following passage, the action, with all its material circumstances, is represented so much to the life, that it would scarce appear more distinct to a real spectator; and it is the manner of description that contributes greatly, to the sublimity of the passage.

He spake; and to confirm his words, out flew Millions of flaming swords, drawn from the thighs Of mighty cherubim; the sudden blaze Far round illumin'd hell: highly they rag'd Against the Highest, and fierce with grasped arms, Clash'd on their sounding shields the din of war, Hurling defiance toward the vault of heav'n.

Milton, b. 1.

A passage I am to cite from Shakespear, falls not much short of that now mentioned in particularity of description:

O you hard hearts! you cruel men of Rome! Knew you not Pompey? Many a time and oft Have you climb'd up to walls and battlements, To towers and windows, yea, to chimney tops, Your infants in your arms; and there have sat The live-long day with patient expectation To see great Pompey pass the streets of Rome. And when you saw his chariot but appear, Have you not made an universal shout, That Tyber trembled underneath his banks, To hear the replication of your sounds, Made in his concave shores?

Julius Cæsar, act 1. sc. 1.

The following passage is scarce inferior to either of those mentioned:

Far before the rest, the son of Ossian comes; bright in the smiles of youth, fair as the first beams of the sun. His long hair waves on his back: his dark brow is half beneath his helmet. The sword hangs loose on the hero's
Ch. XXI.  DESCRIPTION.  211

ro's side; and his spear glitters as he moves. I fled from his terrible eye, King of high Temora.  

Fingal:
The Henriade of Voltaire errs greatly against the foregoing rule: every incident is touched in a summary way, without ever descending to circumstances. This manner is good in a general history, the purpose of which is to record important transactions: but in a fable it is cold and uninteresting: because it is impracticable to form distinct images of persons or things represented in a manner so superficial.

It is observed above, that every useless circumstance ought to be suppressed. The crowding such circumstances, is, on the one hand, not less to be avoided, than the conciseness for which Voltaire is blamed, on the other. In the Æneid, Barce, the nurse of Sichæus, whom we never hear of before nor after, is introduced for a purpose not more important than to call Anna to her sister Dido: and that it might not be thought unjust in Dido, even in this trivial incident, to prefer her husband's nurse before her own, the poet takes care to inform his reader, that Dido's nurse was dead. To this I must oppose a beautiful passage in the same book, where, after Dido's last speech, the poet, without detaining his readers by describing the manner of her death, hastens to the lamentation of her attendants:

Dixerat: atque illam media inter talia ferro Collapsam suscipiunt comites, ensemque cruore Spumantem, sparfaque manus. It clamor ad alta Atria, concussam bacchatur fama per urbem; Lamentis gemituque et foœmineo ululatu Tecta fremitunt, refonat magnis plangoribus æther.

Lib. 4. 1. 662.

As an appendix to the foregoing rule, I add the following observation, That to make a sudden and strong impression, some single circumstance happily selected, has more power than the most laboured description. Macbeth, mentioning to his lady some voices he heard while he was murdering the King, says,

There's one did laugh in's sleep, and one cry'd Murder!

They

* Lib. 4. 1. 632.
They wak'd each other; and I stood and heard them;
But they did say their prayers, and address them
Again to sleep.

*Lady.* There are two lodg'd together.

*Macbeth.* One cry'd, God blest us! and, Amen!
the other;
As they had seen me with these hangman's hands:
Listening their fear, I could not say, Amen,
When they did say, God blest us.

*Lady.* Consider it not so deeply.

*Macbeth.* But wherefore could not I pronounce
Amen?
I had most need of blessing, and Amen
Struck in my throat.

*Lady.* These deeds must not be thought
After these ways; so, it will make us mad.

*Macbeth.* Methought, I heard a voice cry,
Sleep no more!

Alphonso, in the *Mourning Bride,* shut up in the
same prison where his father had been confined:

In a dark corner of my cell I found
This paper, what it is this light will shew.

"If my Alphonso"——*Ha!* [Reading.
"If my Alphonso live, restore him, Heav'n;"
"Give me more weight, crush my declining years"
"With bolts, with chains, imprison, and want;"
"But bless my son, visit not him for me."
It is his hand; this was his pray'r—yet more:
"Let ev'ry hair, which sorrow by the roots [Reading.
"Tears from my hoary and devoted head,
"Be doubled in thy mercies to my son:
"Not for myself, but him, hear me, all-gracious"——
'Tis wanting what should follow—Heav'n should follow,
But 'tis torn off—Why should that word alone
Be torn from his petition? 'Twas to Heav'n,
But Heav'n was deaf, Heav'n heard him not; but thus,
Thus as the name of Heav'n from this is torn,
So did it tear the ears of mercy from
His voice, shutting the gates of pray'r against him.
If piety be thus debarr'd access
On high, and of good men the very best
Ch. XXI. Description. 213

Is singled out to bleed, and bear the scourge,  
What is reward? or what is punishment?  
But who shall dare to tax eternal justice?  
Mourning Bride, act 3. sc. 1.

This incident is a happy invention, and a mark of uncommon genius.

Describing Prince Henry:
I saw young Harry with his beaver on,  
His cuiffes on his thighs, gallantly arm'd,  
Rise from the ground like feather'd Mercury;  
And vaulted with such ease into his seat,  
As if an angel dropt down from the clouds,  
To turn and wind a fiery Pegasus,  
And witch the world with noble horsemanship.  
First part, Henry IV. act 4 sc. 2:

King Henry. Lord Cardinal, if thou think'ft on Heaven's bliss,  
Hold up thy hand, make signal of thy hope.  
He dies, and makes no sign!  
Second Part. Henry VI. act 3. sc. 10.

The same author, speaking ludicrously of an army debilitated with diseases, says,

Half of them dare not shake the snow from off their cassocks, lest they shake themselves to pieces.

I have seen the walls of Balclutha, but they were desolate. The flames had resounded in the halls: and the voice of the people is heard no more. The stream of Clutha was removed from its place by the fall of the walls. The thistle shook there its lonely head: the moss whistled to the wind. The fox looked out from the windows: and the rank gras of the wall waved round his head. Desolate is the dwelling of Morna: silence is in the house of her fathers.  
Fingal.

To draw a character is the master-stroke of description. In this Tacitus excels: his portraits are natural and lively, not a feature wanting nor misplaced. Shakespeare, however, exceeds Tacitus in liveliness, some characteristic circumstance being generally invented or laid hold of, which paints more to the life than many words.  
The
The following instances will explain my meaning; and at the same time prove my observation to be just.

Why should a man, whose blood is warm within,
Sit like his grandfire cut in alabaster?
Sleep when he wakes, and creep into the jaundice,
By being peevish? I tell thee what, Anthonio,
(I love thee, and it is my love that speaks):
There are a sort of men, whose visages
Do cream and mantle like a standing pond;
And do a wilful stillness entertain,
With purpose to be dress'd in an opinion
Of wisdom, gravity, profound conceit;
As who should say, I am Sir Oracle,
And when I ope my lips, let no dog bark!
O my Anthonio, I do know of thofe,
That therefore only are reputed wise,
For saying nothing. *Merchant of Venice, act 1. sc. 2.*

Again:

Gratiano speaks an infinite deal of nothing, more than any man in all Venice: his reasons are two grains of wheat hid in two bushels of chaff; you shall seek all day ere you find them, and when you have them, they are not worth the search. *Ibid.*

In the following passage a character is completed by a single stroke.

*Shallow.* O the mad days that I have spent; and to see how many of mine old acquaintance are dead.

*Silence.* We shall all follow, Cousin.

*Shallow.* Certain, 'tis certain, very sure, very sure; Death (as the Psalmist faith) is certain to all: all shall die. How a good yoke of bullocks at Stamford fair?

*Slender.* Truly, Cousin, I was not there.

*Shallow.* Death is certain. Is old Double of your town living yet?

*Silence.* Dead, Sir.

*Shallow.* Dead! see, see; he drew a good bow: and dead. He shot a fine shoot. How a score of ewes now?

*Silence.* Thereafter as they be. A score of good ewes may be worth ten pounds.

*Shallow.* And is old Double dead?

*Second Part, Henry IV, act 3. sc. 3.*

Describing
Describing a jealous husband:
Neither press, coffer, chest, trunk, well, vault, but he hath an abstract for the remembrance of such places, and goes to them by his note. There is no hiding you in the house. *Merry Wives of Windsor*, act 4. sc. 3.

Congreve has an inimitable stroke of this kind in his comedy of *Love for Love*:

*Ben Legend.* Well, father, and how do all at home? how does brother Dick, and brother Val?

*Sir Sampson.* Dick, body o' me, Dick has been dead these two years. I writ you word when you were at Leghorn.

*Ben.* Me's, that's true; marry, I had forgot. Dick's dead, as you say.

*Falstaff* speaking of Antient Pistol:

He's no swaggerer, hostefls; a tame cheater 'tis faith; you may stroak him as gently as a puppy-greyhound; he will not swagger with a Barbary hen, if her feathers turn back in any shew of resistance.

*Second Part, Henry IV.* act 2. sc. 9.

*Oflian* among his other excellencies is eminently successful in drawing characters; and he never fails to delight his reader with the beautiful attitudes of his heroes. Take the following instances.

*O Oscar!* bend the stong in arm; but spare the feeble hand. Be thou a stream of many tides against the foes of thy people; but like the gale that moves the graves to those who ask thine aid.—So Tremor lived; such Trathal was; and such has Fingal been. My arm was the support of the injured; and the weak rested behind the lightning of my steel.

We heard the voice of joy on the coast, and we thought that the mighty Cathmor came. Cathmor the friend of strangers! the brother of red-haired Cairbar. But their souls were not the same; for the light of heaven was in the bosom of Cathmor. His towers rose on the banks of Atha: seven paths led to his halls: seven chiefs stood on these paths, and called the stranger to the feast. But Cathmor dwelt in the wood to avoid the voice of praise.
Dernid and Oscar were one: they reaped the battle together. Their friendship was strong as their steel; and death walked between them to the field. They rush on the foe like two rocks falling from the brow of Ardven. Their swords are stained with the blood of the valiant: warriors faint at their name. Who is equal to Oscar but Dernid? who to Dernid but Oscar?

Son of Comhal, replied the chief, the strength of Morni's arm has failed: I attempt to draw the sword of my youth, but it remains in its place: I throw the spear, but it falls short of the mark: and I feel the weight of my shield. We decay like the grass of the mountain, and our strength returns no more. I have a son, O Fingal, his soul has delighted in the actions of Morni's youth; but his sword has not been fitted against the foe, neither has his fame begun. I come with him to battle, to direct his arm. His renown will be a sun to my soul, in the dark hour of my departure. O that the name of Morni were forgot among the people! that the heroes would only say, "Behold the father of Gaul."

Some writers, through heat of imagination, fall into contradiction; some are guilty of downright absurdities; and some even rave like madmen. Against such capital errors one cannot be more effectually warned than by collecting instances; and the first shall be of a contradiction, the most venial of all. Virgil speaking of Neptune,

Interea magno miseri murmure pontum,
Emissamque hyenem sensit Neptunus, et imis
Stagna refusa vadis: graviter commotus, et alto
Prospiciens, summa placidum caput extulit unda.

Æneid, i. 128.

Again:
When first young Maro, in his boundless mind,
A work to outlast immortal Rome design'd.

Essay on Criticism, i. 130.

The following examples are of absurdities.

Alii pulsis e tormento catenis discerpti sectique, diminuato corpore pugnabant fibi superfites, ac perempta partis ulteres.

Strada, Dec. 2. l. 2.
Ch. XXI. Description.

Il pòver huomo, che non sen' era accorto,
Andava combattendo, ed era morto. Berni.
He fled, but flying, left his life behind.

Iliad xi. 443.
Full through his neck the weighty falchion sped:
Along the pavement roll'd the muttering head,

The last article is of raving like one mad. Cleopatra speaking to the aspic,

Welcome, thou kind deceiver,
Thou best of thieves; who, with an easy key,
Doft open life, and unperceiv'd by us
Ev'n steal us from ourselves; discharging so
Death's dreadful office, better than himself,
Touching our limbs so gently into slumber,
That Death stands by, deceiv'd by his own image,
And thinks himself but sleep.

Dryden, All for Love, act 5.

Reasons that are common and known to every one,
ought to be taken for granted: to express them is
childish, and interrupts the narration. Quintus Curtius,
relating the battle of Issus,

Jam in conspectu, sed extra teli jaetum, utraque acies
erat; quum priores Perse inconditum et trucem sustrulere
clamorem. Redetur et a Macedonibus major, exercitus
impar numero, sed jugis montium vastisque saltibus re-
percussus: quippe semper circumjacta nemora petraeque,
quintumcumque accipere vocem, multiplicato sone re-
ferunt.

Having discussed what observations occurred upon
the thoughts or things expressed, I proceed to what
more peculiarly concerns the language or verbal dres.
The language proper for expressing passion being handled
in a former chapter, several observations there made
are applicable to the present subject; particularly, That
words being intimately connected with the ideas they
represent, the emotions raised by the sound and by the
sense ought to be concordant. An elevated subject re-
quires an elevated style; what is familiar, ought to be
familiarly expressed: a subject that is serious and im-
portan
portant, ought to be clothed in plain nervous language; a description, on the other hand, addressed to the imagination, is susceptible of the highest ornaments that founding words and figurative expression can bestow upon it.

I shall give a few examples of the foregoing doctrine. A poet of any genius will not readily dress a high subject in low words; and yet blemishes of that kind are found even in classical works. Horace, for example, observing that men, perfectly satisfied with themselves, are seldom so with their condition, introduces Jupiter indulging to each his own choice:

Jam faciam quod vultis: eris tu, qui modo miles, Mercator: tu, consul'tus modo, rusticus: hinc vos, Vos hinc mutatis discedite partibus: eia, Quid? statis? nolint: arqui licet esse beatis.
Quid cause est, merito quin illis Jupiter ambas Iratus buccas infert? neque se fore posthaec
Tam facilem dicat, votis ut praebat aures?

Serm. lib. 1. sat. 1. l. 16.

Jupiter in wrath puffing up both cheeks, is a low and even ludicrous expression, far from suitable to the gravity and importance of the subject: every one must feel the discordance. The following couplet, sinking far below the subject, is not less ludicrous.

Not one looks backward, onward still he goes,
Yet ne'er looks forward farther than his nose.

Essay on Man, ep. iv. 223.

Le Rhin tremble et fremit à ces tristes nouvelles; Le feu fort à travers ses humides prunelles. C'est donc trop peu, dit-il, que l'Eicaut en deux mois Ait appris à couler tous de nouvelles loix; Et de mille ramparts mon onde environnée De ces fleuves sans nom suivra la destinée? Ah! périlents mes eaux, ou par d'illustres coups Montrons qui doit céder, des mortels ou de nous.

A ces mots essuant sa barbe limonneuse, Il prend d'un vieux guerrier la figure poudreuse. Son front cicatricé rend son air fatieux, Et l'ardeur du combat étincelie en ses yeux.

Boileau, epître 4. l. 61.
A god wiping his dirty beard is proper for burlesque poetry only; and altogether unsuitable to the strained elevation of this poem.

On the other hand, to raise the expression above the tone of the subject, is a fault than which none is more common. Take the following instances.

Orcan le plus fidèle à servir ses desseins,
Né sous le ciel brûlant des plus noirs Africains.

Bajazet, act 3, sc. 8.

Les ombres par trois fois ont obscuré les cieux
Depuis que le sommeil n'est entré dans vos yeux;
Et le jour a trois fois chassé la nuit obscure
Depuis que votre corps languit sans nourriture.

Phedra, act 1, sc. 3.

Assuerus. Ce mortel, qui montra tant de zèle pour moi, Vit-il encore ?

Assaph. —— Il voit l'astre qui vous éclaire.

Esther, act 2, sc. 3.

Oui, c'est Agamemnon, c'est ton roi qui t'éveille;
Viens, reconnois la voix qui frappe ton oreille.

Iphigenie.

No jocund health that Denmark drinks to day,
But the great cannon to the clouds shall tell;
And the King's rowse the heav'n shall bruit again,
Respeaking earthly thunder.

Hamlet, act 1, sc. 2.

In the inner room
I spy a winking lamp, that weakly strikes
The ambient air, scarce kindling into light.

Southern, Fate of Capua, act 3.

In the funeral orations of the Bishop of Meaux, the following passages are raised far above the tone of the subject:

L'Ocean étonné de se voir traversé tant de fois, en
les appareils si divers, et pour des causes si différentes,

p. 6.

Grande Reine, je satisfais à vos plus tendres deirs,
quand je célébre ce monarque; et fon cœur qui n'a ja-
nais vécu que pour lui, se évêille, tout poudre qu'il est,
t devient sensible, même sous ce drap mortuaire, au
om d'un époux si cher.

p. 32.

Vol. II.
Montesquieu, in a didactic work, *L'esprit des Loix*, gives too great indulgence to imagination: the tone of his language swells frequently above his subject. I give an example:

Mr le Comte de Boulainvilliers et Mr l'Abbé Dubos ont fait chacun un système, dont l'un semble être une conjuration contre le tiers-état, et l'autre une conjuration contre la noblesse. Lorsque le Soleil donna à Phaéton son char à conduire, il lui dit, Si vous montez trop haut, vous brulerez la demeure céleste; si vous descendez trop bas, vous réduirez en cendres la terre: n'allez point trop à droite, vous tomberiez dans la constellation du serpent; n'allez point trop à gauche, vous iriez dans celle de l'autel: tenez-vous entre les deux.

*L. 30. ch. 10.*

The following passage, intended, one would imagine, as a receipt to boil water, is altogether burlesque by the laboured elevation of the diction:

A massy caldron of stupendous frame
They brought, and plac'd it o'er the rising flame:
Then heap the lighted wood; the flame divides
Beneath the vase, and climbs around the sides:
In its wide womb they pour the rushing stream:
The boiling water bubbles to the brim.

*Iliad xviii. 405.*

In a passage at the beginning of the 4th book of Tele- machus, one feels a sudden bound upward without preparation, which accords not with the subject:

Calypso, qui avait été jusqu'à ce moment immobile et transportée de plaisir en écoutant les aventures de Télémaque, l'interrompit pour lui faire prendre quelque ress. Il est temps, lui dit-elle, que vous alliez goûter la douceur du sommeil après tant de travaux. Vous n'avez rien à craindre ici; tout vous est favorable. Abandonnez vous donc à la joie. Goutez la paix, et tous les autres dons des dieux dont vous allez être comblé Demain, quand l'Aurore avec ses doigts de roses en trouvera les portes dorées de l'Orient, et que le cheval du soleil sortant de l'onde amère répandront les flamme du jour, pour chasser devant eux toutes les étoiles du ciel.
nous reprendrons, mon cher Télémaque, l'histoire de vos malheurs.

This obviously is copied from a similar passage in the Æneid, which ought not to have been copied, because it lies open to the faine censure; but the force of authority is great:

At regina gravi jamdudum saucia cura, Vulnus alit venis, et æco carpitur igni. Multa viri virtus animo, multusque recurfat Gentis honos: hærent infixi pectori vultus, Verbaque: nec placidam membris dat cura quietem. Postera Phæbe à lucrabet lampade terras, Humentemque Aurora polo dimoverat umbram; Cum sic unanimem alloquitur malesana fororem.

Take another example where the words rise above the subject:

Ainsi les peuples y accoururent bientôt en foule de toutes parts; le commerce de cette ville étoit semblable au flux et au reflux de la mer. Les tréfors y entroient comme les flots viennent l'un sur l'autre. Tout y étoit apporté et en fortoit librement; tout ce qui y entroit étoit utile; tout ce qui en fortoit, laissoit en fortant d'autres richefles en sa place. La justice sévère présidoit dans le port au milieu de tant de nations. La franchise, la bonne foi, la candeur, sembroient du haut de ces superbs tours appeller les marchands des terres les plus éloignées: chacun de ces marchands, soit qu'il vint des rives orientales où le soleil sort chaque jour du sein des ondes, soit qu'il fût parti de cette grande mer où le soleil laffe de son cours va eteindre ses feux, vivoit paisible et en sûreté dans Salente comme dans sa patrie!

Telemaque, l. 12.

The language of Homer is suited to his subject, not less accurately than the actions and sentiments of his heroes are to their characters. Virgil, in that particular, falls short of perfection: his language is flately throughout; and though he descends at times to the simpless branches of cookery, roasting and boiling for example, yet he never relaxes a moment from the high tone.
In adjusting his language to his subject, no writer equals Swift. I can recollect but one exception, which at the same time is far from being gross: *The journal of a modern lady* is composed in a style blending sprightliness with familiarity, perfectly suited to the subject: in one passage, however, the poet deviating from that style, takes a tone far above his subject. The passage I have in view begins, l. 116. But let me now a while survey, &c. and ends at l. 135.

It is proper to be observed upon this head, that writers of inferior rank are continually upon the stretch to enliven and enforce their subject by exaggeration and superlatives. This unluckily has an effect contrary to what is intended: the reader, disgusted with language that swells above the subject, is led by contrast to think more meanly of the subject than it may possibly deserve. A man of prudence, beside, will be not less careful to husband his strength in writing than in walking: a writer too liberal of superlatives, exhausts his whole stock upon ordinary incidents, and reserves no share to express, with greater energy, matters of importance.

The power of language to imitate thought, is not confined to the capital circumstances above mentioned: it reacheth even the lighter modifications. Slow action, for example, is imitated by words pronounced slow; labour or toil, by words harsh or rough in their sound. But this subject has been already handled.

In dialogue-writing, the condition of the speaker is chiefly to be regarded in framing the expression. The

---

* See Æneid. lib. i. 188.—219.

† Montaigne, reflecting upon the then present modes, observes, that there never was at any other time so abject and servile prostitution of words in the addresses made by people of fashion to one another; the humblest tenders of life and soul, no professions under that of devotion and adoration; the writer constantly declaring himself a vassal, nay a slave: so that when any more serious occasion of friendship or gratitude requires more genuine professions, words are wanting to express them.

‡ Ch. 18. sect. 3.
centinel in *Hamlet*, interrogated with relation to the
ghost whether his watch had been quiet, answers with
great propriety for a man in his station, "Not a mouse
* flitting*.

I proceed to a second remark, not less important than
the former. No person of reflection but must be sen-
fible, that an incident makes a stronger impression on an
eye-witness, than when heard at second hand. Writers
of genius, sensible that the eye is the best avenue to the
heart, represent every thing as passing in our sight; and
from readers or hearers, transform us, as it were, into
spectators: a skilful writer conceals himself, and pre-
sents his personages: in a word, every thing becomes
dramatic as much as possible. Plutarch, *de gloria A-
theniensium*, observes, that Thucydides makes his reader
a spectator, and inspires him with the same passions as
if he were an eye-witness; and the same observation is
applicable to our countryman Swift. From this happy
talent arises that energy of style which is peculiar to the
latter: he cannot always avoid narration; but the pen-
cil is his choice, by which he bestows life and colouring
upon his objects. Pope is richer in ornament, but po-
fesses not in the same degree the talent of drawing from
the life. A translation of the sixth satire of Horace,
begun by the former, and finished by the latter, affords
the fairest opportunity for a comparison. Pope obvi-
ously imitates the picturesque manner of his friend: yet
every one of taste must be sensible, that the imitation,
though fine, falls short of the original. In other in-
stances, where Pope writes in his own style, the differ-
eence of manner is still more conspicuous.

Abstract or general terms have no good effect in any
composition for amusement; because it is only of par-
*ticular

* One can scarce avoid smiling at the blindness of a
certain critic, who, with an air of self-sufficiency, con-
demns this expression as low and vulgar. A French poet,
says he, would express the same thought in a more sub-
lime manner: "Mais tout dort, et l'armée, et les "vents, et Neptune." And he adds, "The English
"poet may please at London, but the French every
"where else."
ticular objects that images can be formed*. Shakespeare's style in that respect is excellent: every article in his descriptions is particular, as in nature; and if accidentally a vague expression slip in, the blemish is extremely discernible by the bluntness of its impression.

Take the following example: Falstaff, excusing himself for running away at a robbery, says,

By the Lord, I knew ye, as well as he that made ye. Why, hear ye, my masters; was it for me to kill the heir-apparent? Should I turn upon the true prince? Why, thou knowe'st, I am as valiant as Hercules; but beware instinct, the lion will not touch the true prince: instinct is a great matter. I was a coward on instinct: I shall think the better of myself, and thee, during my life; I, for a valiant lion, and thou for a true prince. But, by the Lord, lads, I am glad you have the money. Hottels, clap to the doors, watch to-night, pray to-morrow. Gallants, lads, boys, hearts of gold, all the titles of good fellowship come to you! What, shall we be merry? shall we have a play extempore?

First part, Henry IV. act 2. sc. 9.

The sentence I object to is, instinct is a great matter, which makes but a poor figure, compared with the liveliness of the rest of the speech. It was one of Homer's advantages, that he wrote before general terms were multiplied: the superior genius of Shakespeare displays itself in avoiding them after they were multiplied. Addison describes the family of Sir Roger de Ceverley in the following words:

You would take his valet de chambre for his brother, his butler is gray-headed, his groom is one of the gravest men that I have ever seen, and his coachman has the looks of a privy counsellor. Spectator, No. 106.

The description of the groom is less lively than of the others; plainly because the expression, being vague and general, tends not to form any image. "Dives opum variarum*" is an expression still more vague; and so are the following:

* See chap. 4.
* Georg. ii. 468.
Ch. XXI. Description. 225

Maecenas, meærum
Grande decus, columnæque rerum.
Horat. Carm. lib. 2: ode 17.

et fide Teia
Dices laborantes in uno
Penelope, vitreamque Circen.

Ridiculum acri
Fortius et melius magnas plerumque secut res.
Horat. Satir. lib. 1: sat. 10.

In the fine arts, it is a rule, to put the capital objects in the strongest point of view; and even to present them oftener than once, where it can be done. In history-painting, the principal figure is placed in the front, and in the best light: an equestrian statue is placed in the centre of streets, that it may be seen from many places at once. In no composition is there greater opportunity for this rule than in writing:

Sequitur pulcherrimus Aeturn,
Aeturn equo fidens et versuscoloribus armis.

Æneid. x. 186.

Full many a lady
I've ey'd with best regard, and many a time
Th' harmony of their tongues hath into bondage
Brought my too diligent ear; for several virtues
Have I lik'd several women, never any
With so full soul, but some defect in her
Did quarrel with the noblest grace she ow'd,
And put it to the foil. But you, O you,
So perfect, and so peerless, are created
Of every creature's best.

Orlando: — Whate'er you are
That in this desert inaccessible,
Under the shade of melancholy boughs,
Lose and neglect the creeping hours of time;
If ever you have look'd on better days;
If ever been where bells have knoll'd to church;
If ever sat at any good man's feast;
If ever from your eye-lids wip'd a tear,
And know what 'tis to pity, and be pity'd;

Let
Let gentleness my strong enforcement be,
In the which hope I blush, and hide my sword:
  Duke fen. True is it that we have seen better days;
And have with holy bell been knoll’d to church;
And sat at good mens feasts; and wip’d our eyes.
Of drops that sacred pity had engender’d;
And therefore fit you down in gentleness,
And take upon command what help we have,
That to your wanting may be minifred.
  As you like it.

With thee conversing I forget all time;
All seasons and their change, all please alike.
Sweet is the breath of morn, her rising sweet,
With charm of earlist birds; pleasant the sun
When first on this delightful land he spreads
His orient beams, on herb, tree, fruit, and flow’r,
Glistening with dew; fragrant the fertile earth
After soft showers; and sweet the coming on.
Of grateful evening mild, the silent night.
With this her solemn bird, and this fair moon,
And these the gems of heav’n, her starry train:
But neither breath of morn, when she ascends
With charm of, earlist birds, nor rising sun
On this delightful land, nor herb, fruit, flower,
Glistening with dew, nor fragrance after showers,
Nor grateful evening mild, nor silent night,
With this her solemn bird, nor walk by moon,
Or glittering star-light, without thee is sweet.

Paradise lost, book 4. l. 634.

What mean ye, that ye use this proverb, The fathers
have eaten four grapes, and the childrens teeth are set on
edge? As I live, faith the Lord God, ye shal not have
occasion to use this proverb in Israel. If a man keep my
judgments to deal truly, he is just, he shall surely live.
But if he be a robber, a shedder of blood; if he have
eaten upon the mountains, and defiled his neighbour’s
wife; if he have oppressed the poor and needy, have
spoiled by violence, have not restored the pledge, have
lift up his eyes to idols, have given forth upon usury,
and have taken increase: shall he live? he shall not live:
he shall surely die; and his blood shall be upon him.
Now, lo, if he beget a son, that seeth all his father’s sins,  
and,
and considereth, and doth not such like; that hath not eaten upon the mountains, hath not lift up his eyes to idols, nor defiled his neighbour's wife, hath not oppressed any, nor with-held the pledge, neither hath spoiled by violence, but hath given his bread to the hungry, and covered the naked with a garment; that hath not received usury nor increase, that hath executed my judgments, and walked in my statutes; he shall not die for the iniquity of his father; he shall surely live. The soul that finneth, it shall die; the son shall not bear the iniquity of the father, neither shall the father bear the iniquity of the son; the righteousness of the righteous shall be upon him, and the wickedness of the wicked shall be upon him. Have I any pleasure that the wicked should die, saith the Lord God; and not that he should return from his ways and live? Ezekiel xvi.

The repetitions in Homer, which are frequent, have been the occasion of much criticism. Suppose we were at a loss about the reason, might not taste be sufficient to justify them? At the same time, we are at no loss about the reason: they evidently make the narration dramatic, and have an air of truth, by making things appear as passing in our sight.

A concise comprehensive style is a great ornament in narration; and a superfluity of unnecessary words, not less than of circumstances, a great nuisance. A judicious selection of the striking circumstances clothed in a nervous style, is delightful. In this style, Tacitus excels all writers, antient and modern. Instances are numberless: take the following specimen.

After Tacitus, Offian in that respect justly merits the place of distinction. One cannot go wrong for examples in any part of his book; and at the first opening the following instance meets my eye:

Nathos clothed his limbs in shining steel. The stride of the chief is lovely: the joy of his eye terrible. The wind ruffles in his hair. Darthula is silent at his side.
her look is fixed on the chief. Striving to hide the rising sigh, two tears swell in her eyes.

I add one other instance, which, beside the property under consideration, raises delicately our most tender sympathy:

Son of Fingal! dost thou not behold the darkness of Crothar's hall of shells? My soul was not dark at the feast, when my people lived. I rejoiced in the presence of strangers, when my son shone in the hall. But, Ossian, he is a beam that is departed, and left no streak of light behind. He is fallen, son of Fingal, in the battles of his father.—Rothmar, the chief of graspy Tromlo, heard that my eyes had failed; he heard that my arms were fixed in the hall, and the pride of his soul arose. He came towards Croma; my people fell before him. I took my arms in the hall, but what could sightless Crothar do? My steps were unequal; my grief was great. I wished for the days that were past; days! wherein I fought, and won in the field of blood. My son returned from the chase; the fair-haired Fovar-gormo. He had not lifted his sword in battle, for his arm was young. But the soul of the youth was great; the fire of valour burnt in his eye. He saw the disordered steps of his father, and his sigh arose. King of Croma, he said, is it because thou hast no son? Is it for the weakness of Fovar-gormo's arm that thy sighs arise? I begin, my father, to feel the strength of my arm? I have drawn the sword of my youth, and I have bent the bow. Let me meet this Rothmar, with the youths of Croma: let me meet him, O my father, for I feel my burning soul.

And thou shalt meet him, I said, son of the sightless Crothar! But let others advance before thee, that I may hear the tread of thy feet at thy return; for my eyes behold thee not, fair-haired Fovar-gormo!—He went, he met the foe; he fell. The foe advances towards Croma. He who slew my son is near, with all his pointed spears.

If a concise or nervous style be a beauty, tautology must be a blemish; and yet writers, fettered by verse, are not sufficiently careful to avoid this slovenly practice: they may be pitied, but they cannot be justified. Take for
for a specimen the following instances, from the best poet, for verification at least, that England has to boast of.

High on his helm celestial lightnings play,
His beamy shield emits a living ray,
Th' unwearied blaze incessant streams supplies,
Like the red star that fires th' autumnal skies.

**Iliad v. 5.**

Strength and omnipotence invest thy throne.

**Iliad viii. 576.**

So silent fountains, from a rock's tall head,
In sable streams soft-trickling waters shed.

**Iliad ix. 19.**

His clanging armour rung.

**Iliad xii. 94.**

Fear on their cheek, and horror in their eye.

**Iliad xv. 4.**

The blaze of armour flash'd against the day.

**Iliad xvii. 736.**

As when the piercing blasts of Boreas blow.

**Iliad xix. 380.**

And like the moon, the broad resulgent shield
Blaz'd with long rays, and gleam'd athwart the field.

**Iliad xix. 402.**

No—could our swiftness o'er the wind prevail,
Or beat the pinions of the western gale,
All were in vain—

**Iliad xix. 460.**

The humid sweat from ev'ry pore descends.

**Iliad xxiii. 829.**

Redundant epithets, such as *humid* in the last citation, are by Quintilian disallow'd to orators; but indulged to poets *, because his favourite poets, in a few instances, are reduced to such epithets for the sake of verification; for instance, *Prata canis albicant pruinis*, of Horace, and *liquidos fontes*, of Virgil.

As an apology for such careless expressions, it may well suffice, that Pope, in submitting to be a translator, acts below his genius. In a translation, it is hard to require the same spirit or accuracy, that is cheerfully bestowed.

* L. 8. cap. 6. sect. 2.
Now'd on an original work. And to support the reputation of that author, I shall give some instances from Virgil and Horace, more faulty by redundancy than any of those above mentioned:

Sæpe etiam immensum ccelo venit agmen aquarum,
Et foedam glomerant tempestatem imbris atris
Colleéta ex alto nubes: ruit arduus æther,
Et pluvia ingenti sata læta, bounque labores
Diluit. \( \textit{Georg. lib. i. 322} \)

Postquam altum tenuere rates, nec jam amplius ullæ
Apparent terræ: ceulm undique et undique pontus:
Tum mihi caruleus supra caput astitit imber,
Noctem hyememque serens: et inhorruit unda tenebris.
\( \textit{AEneid. lib. iii. 197} \)

Hinc tibi copia
Manabit ad plenum benigno
Ruris honorum opulenta cornu.
\( \textit{Horat. Carm. lib. i. ode 17} \)

Videre fessos vomerem inversum boves
Collo trahentes languido.
\( \textit{Horat. epod. ii. 63} \)

Here I can luckily apply Horace's rule against himself:
Elt brevitate opus, ut currat sententia, neue
Impediat verbis lafas onerantibus aures.
\( \textit{Serm. lib. i. sat. x. 9} \)

I close this chapter with a curious inquiry. An object, however ugly to the sight, is far from being so when represented by colours or by words. What is the cause of this difference? With respect to painting the cause is obvious: a good picture, whatever the subject be, is agreeable by the pleasure we take in imitation; and this pleasure overbalancing the disagreeableness of the subject, makes the picture upon the whole agreeable. With respect to the description of an ugly object, the cause is what follows. To connect individuals in the social state, no particular contributes more than language, by the power it possesses of an expeditious communication of thought, and a lively representation of transactions. But nature hath not been satisfied to recommend language by its utility merely; independent of utility, it is made susceptible of many beauties, which
Ch. XXI. Description.

are directly felt, without the intervention of any reflection*. And this unfolds the mystery; for the pleasure of language is so great, as in a lively description to overbalance the disagreeableness of the image raised by it †. This however is no encouragement to deal in disagreeable subjects; for the pleasure is incomparably greater where the subject and the description are both of them agreeable.

The following description is upon the whole agreeable, though the subject described is in itself dismal:

Nine times the space that measures day and night. To mortal men, he with his horrid crew Lay vanquish'd, rolling in the fiery gulf, Confounded though immortal! but his doom Reserv'd him to more wrath; for now the thought Both of loft happiness and lasting pain Torments him; round he throws his baleful eyes. That witness'd huge affliction and dismay, Mix'd with obdurate pride and fledfast hate. At once as far as angels ken he views The dismal situation waftle and wild: A dungeon horrible; on all sides round As one great furnace flam'd; yet from those flames No light, but rather darkness visible. Serv'd only to discover sights of wo, Regions of sorrow, doleful shades, where peace And rest can never dwell, hope never comes That comes to all; but torture without end Still urges, and a fiery deluge, fed With ever-burning sulphur unconfum'd! Such place eternal justice had prepar'd For those rebellious. Paradise lost, book 1. l. 59.

An unmanly depression of spirits in time of danger is not an agreeable sight; and yet a fine description or representation of it will be relished:

K. Richard. What must the King do now? must he submit?

The King shall do it: must he be depos'd?

* See chap. 18.
† See chap. 2. part 4.
The King shall be contented: must he lose
The name of King? o' God's name, let it go;
I'll give my jewels for a set of beads;
My gorgeous palace, for a hermitage;
My gay apparel, for an almsman's gown;
My figur'd goblets, for a dish of wood;
My sceptre, for a palmer's walkingstaff;
My subjects, for a pair of carved taints;
And my large kingdom, for a little grave;
A little, little grave;—an obscure grave.
Or I'll be bury'd in the King's highway;
Some way of common tread, where subjects feet
May hourly trample on their sovereign's head;
For on my heart they tread now, whilst I live;
And, bury'd once, why not upon my head?

Richard II. aed 3. sc. 6:

Objects that strike terror in a spectator, have in poetry and painting a fine effect. The picture, by raising a flight emotion of terror, agitates the mind; and in that condition every beauty makes a deep impression. May not contrast heighten the pleasure, by opposing our present security to the danger we would be in by encountering the object represented?

———The other shape,
If shape it might be call'd, that shape had none
Distinguishable in member, joint, or limb;
Or substance might be call'd that shadow seem'd,
For each seem'd either; black it look'd as night,
Fierce as ten furies, terrible as hell,
And shook a dreadful dart.

Paradise lost, book 2. l. 666.

———Now storming fury rose,
And clamour such as heard in heaven till now
Was never: arms on armour clashing bray'd
Horrible discord, and the madding wheels
Of brazen chariots rag'd; dire was the noise
Of conflict; overhead the dismal hiss
Of fiery darts in flaming volleys flew,
And flying vaulted either host with fire.
So under fiery cope together rush'd
Both battles main, with ruinous assault

And
Ch. XXI. Description.

And inextinguishable rage; all heav’n
Refounded, and had earth been then, all earth
Had to her centre shook.

Paradise lost, book 6. l. 207.

Ghost. ———— But that I am forbid
To tell the secrets of my prison-house,
I could tell a tale unfold, whose lightest word
Would harrow up thy soul, freeze thy young blood,
Make thy two eyes, like stars, start from their spheres,
Thy knotty and combined locks to part,
And each particular hair to stand on end,
Like quills upon the fretful porcupine:
But this eternal blazon must not be
To ears of flesh and blood.

Hamlet, act 1. sc. 8.

Gratiano. Poor Desdemona! I’m glad thy father’s dead:
Thy match was mortal to him; and pure grief
Shore his old thread in twain. Did he live now,
This sight would make him do a desperate turn:
Yea, curse his better angel from his side,
And fall to reprobation.

Othello, act 5. sc. 8.

Objects of horror must be excepted from the foregoing theory; for no description, however lively, is sufficient to overbalance the disgust raised even by the idea of such an object. Every thing horrible ought therefore to be avoided in a description. Nor is this a severe law: the poet will avoid such scenes for his own sake, as well as for that of his reader; and to vary his descriptions, nature affords plenty of objects that disgust us in some degree without raising horror. I am obliged therefore to condemn the picture of Sin in the second book of Paradise lost, though drawn with a masterly hand: the original would be a horrid spectacle; and the horror is not much softened in the copy:

——— Pensive here I sat
Alone, but long I sat not, till my womb
Pregnant by thee, and now excessive grown
Prodigious motion felt and rueful throes.
At last this odious offspring whom thou seest,
Thine own begotten, breaking violent way,
Tore through my intrails, that with fear and pain
Distorted,
Distorted, all my nether shape thus grew
Transform’d; but he my imbred enemy
Forth issu’d, brandishing his fatal dart,
Made to destroy: I fled, and cry’d out Death.
Hell trembl’d at the hideous name, and sigh’d
From all her caves, and back resounded Death.
I fled, but he pursu’d, (though more, it seems;
Inflam’d with lust than rage), and swifter far,
Me overtook, his mother all dismay’d,
And in embraces forcible and foul
Ingarding with me, of that rape begot
These yelling monsters, that with ceaseless cry
Surround me, as thou saw’st, hourly conceiv’d.
And hourly born, with sorrow infinite
To me; for when they lift, into the womb
That bred them they return, and howl and gnaw
My bowels, their repast; then bursting forth,
Ashèst with conscious terrors vex me round,
That rest or intermission none I find...
Before mine eyes in opposition fits
Grim Death, my son and foe, who sets them on,
And me his parent would full soon devour
For want of other prey, but that he knows
His end with mine involv’d; and knows that I
Should prove a bitter morsel, and his bane,
Whenever that shall be. Book 2. i. 777.

Iago’s character in the tragedy of Othello, is insufferably monstrous and Satanical: not even Shakespear’s masterly hand can make the picture agreeable.

Though the objects introduced in the following scenes are not altogether so horrible as Sin is in Milton’s picture; yet with every person of delicacy, disgust will be the prevailing emotion:

—— S trophades Graio stant nomine dictæ
Insulæ Ionio in magno: quas dira Celæno,
Harpyiæque colunt alæ: Phineia postquam
Clausa donus, menfasque metu liquere priores.
Tristius haud illis montrum, nec lærvis ultra
Peñis et ira Deûm Stygiis felse extulit undis.
Virginei volucrum vultus, fœdissima ventris
Proluvies, uncæque manus, et pallida semper
Ora fame.

Nam simul expletus dapius, vinoque sepultus
Cerviciem inflexam poluit, jacuitque per antrum
Immensus, saniecrustans, ac fruista cruento
Per somnum commixta mero: nos, magna precati
Numina, fortítique vices, una undique circum
Fundimur, et telo lumen terebramus acuto
Ingens, quod torva solum sub fronte latebat.

Æneid. lib. iii. 613.

C H A P. XXII.

**Epic and Dramatic Compositions.**

Tragedy differs not from the epic in substantialis: in both the same ends are propofed, viz. instruction.
tion and amusement; and in both the same mean is employ'd, viz. imitation of human actions. They differ only in the manner of imitating: epic poetry deals in narration: tragedy represents its facts as passing in our sight; in the former, the poet introduces himself as an historian; in the latter, he presents his actors, and never himself.

This difference, regarding form only, may be thought slight: but the effects it occasions, are by no means so; for what we see makes a deeper impression than what we learn from others. A narrative poem is a story told by another: facts and incidents passing upon the stage, come under our own observation; and are beside much enlivened by action and gesture, expressive of many sentiments beyond the reach of language.

A dramatic

* The dialogue in a dramatic composition distinguishes it so clearly from other compositions, that no writer has thought it necessary to search for any other separating mark. But much useless labour has been bestowed, to distinguish an epic poem by some peculiar mark. Bossu defines this poem to be, "A composition in verse, intended to form the manners by instructions disguised under the allegories of an important action," which will exclude every epic poem founded upon real facts, and perhaps include several of Aesop's fables. Voltaire reckons verse so essential, as for that single reason to exclude the adventures of Telemachus. See his Essay upon epic Poetry. Others, affected with substance more than with ornament, hesitate not to pronounce that poem to be epic. It is not a little diverting to see so many profound critics hunting for what is not to be found: they take for granted, without the least foundation, that there must be some precise criterion to distinguish epic poetry from every other species of writing. Literary compositions run into each other, precisely like colours: in their strong tints they are easily distinguished; but are susceptible of so much variety, and of so many different forms, that we never can say where one species ends and another begins. As to the general taste, there is little reason to doubt, that a work where heroic actions are related in an elevated style, will, without further requisite, be deemed an epic poem.
A dramatic composition has another property, independent altogether of action; which is, that it makes a deeper impression than narration: in the former, persons express their own sentiments; in the latter, sentiments are related at second hand. For that reason, Aristotle, the father of critics, lays it down as a rule, that in an epic poem the author ought to take every opportunity of introducing his actors, and of confining the narrative part within the narrowest bounds. Homer understood perfectly the advantage of that method; and his poems are both of them in a great measure dramatic. Lucan runs to the opposite extreme; and is guilty of a still greater fault, in stuffing his Pharsalia with cold and languid reflections, the merit of which he assumes to himself, and deigns not to share with his actors. Nothing can be more injudiciously timed, than a chain of such reflections, which suspend the battle of Pharsalia after the leaders had made their speeches, and the two armies are ready to engage.

Aristotle, from the nature of the fable, divides tragedy into simple and complex: but it is of greater moment, with respect to dramatic as well as epic poetry, to found a distinction upon the different ends attained by such compositions. A poem, whether dramatic or epic, that has nothing in view but to move the passions, and to exhibit pictures of virtue and vice, may be distinguished by the name of pathetic: but where a story is purposely contrived to illustrate some moral truth, by shewing that disorderly passions naturally lead to external misfortunes, such composition may be denominated moral. Beside making a deeper impression than can be done

* Poet. chap. 25. sect. 6.
† Lib. 7. from line 385. to line 460.
‡ The same distinction is applicable to that sort of fable which is said to be the invention of Æsop. A moral, it is true, is by all critics considered as essential to such fable. But nothing is more common than to be led blindly by authority; for of the numerous collections I have seen, the fables that clearly inculcate a moral, make a very small part. In many fables, indeed, proper
Epic and Dramatic

Ch. XXII.

done by cool reasoning, a moral poem does not fall short of reasoning in affording conviction: the natural connection of vice with misery, and of virtue with happiness, may be illustrated by stating a fact as well as by urging an argument. Let us assume, for example, the following moral truths; that discord among the chiefs renders ineffectual all common measures; and that the consequences of a slightly-founded quarrel, fostered by pride and arrogance, are not less fatal than those of the grossest injury: these truths may be inculcated, by the quarrel between Agamemnon and Achilles at the siege of Troy. If facts or circumstances be wanting, such as tend to rouse the turbulent passions, they must be invented; but no accidental nor unaccountable event ought to be invented or admitted; for the necessary or probable connection between vice and misery, is not learned from any events but what are naturally occasioned by the characters and passions of the persons represented, acting in such and such circumstances. A real event of which we see not the cause, may afford a lesson, upon the presumption that what hath happened may again happen: but this cannot be inferred from a story that is known to be a fiction.

Many are the good effects of such compositions. A pathetic composition, whether epic or dramatic, tends to a habit of virtue, by exciting us to do what is right, and restraining us from what is wrong*. Its frequent pictures of human woes, produce, beside, two effects extremely salutary: they improve our sympathy, and at the same time fortify us in bearing our own misfortunes. A moral composition must obviously produce the same good effects, because by being moral it ceaseth not to be pathetic: it enjoys beside an excellence peculiar to itself; for it not only improves the heart, as above mentioned, but instructs the head by the moral it contains. For my part, I cannot imagine any entertainment more suited

proper pictures of virtue and vice are exhibited: but the bulk of these collections convey no instruction, nor afford any amusement beyond what a child receives in reading an ordinary story.

*See chap. 2. part 1. sect. 4.
suited to a rational being, than a work thus happily illustrating some moral truth; where a number of persons of different characters are engaged in an important action, some retarding, others promoting, the great catastrophe: and where there is dignity of style as well as of matter. A work of that kind, has our sympathy at command, and can put in motion the whole train of the social affections: our curiosity in some scenes is excited, in others gratified: and our delight consummated at the close, upon finding, from the characters and situations exhibited at the commencement, that every incident down to the final catastrophe is natural, and that the whole in conjunction make a regular chain of causes and effects.

Considering that an epic and a dramatic poem are the same in substance and have the same aim or end, one would readily imagine, that subjects proper for the one must be equally proper for the other. But considering their difference as to form, there will be found reason to correct that conjecture, at least in some degree. Many subjects may indeed be treated with equal advantage in either form; but the subjects are still more numerous for which they are not equally qualified; and there are subjects proper for the one and not at all for the other. To give some slight notion of the difference, as there is no room here for enlarging upon every article, I observe, that dialogue is the best qualified for expressing sentiments, and narrative for displaying facts. Heroism, magnanimity, undaunted courage, and the whole tribe of the elevated virtues, figure best in action: tender passions, and the whole tribe of sympathetic affections, figure best in sentiment: what we feel is the most remarkable in the latter; what we perform is the most remarkable in the former. It clearly follows, that tender passions are more peculiarly the province of tragedy, grand and heroic actions of epic poetry.

I have no occasion to say more upon the epic, considered

* In Racine, tender sentiments prevail; in Corneille, grand and heroic manners. Hence clearly the preference of the former before the latter, as dramatic poets. Corneille would have figured better in an heroic poem.
dered as peculiarly adapted to certain subjects. But as dramatic subjects are more complex, I must take a narrower view of them; which I do the more willingly, in order to clear a point thrown into great obscurity by critics.

In the chapter of emotions and passions *, it is occasionally shewn, that the subject best fitted for tragedy is where a man has himself been the cause of his misfortune; not so as to be deeply guilty, nor altogether innocent: the misfortune must be occasioned by a fault incident to human nature, and therefore in some degree venial. Such misfortunes call forth the social affections, and warmly interest the spectator. An accidental misfortune, if not extremely singular, doth not greatly move our pity: the person who suffers, being innocent, is freed from the greatest of all torments, that anguish of mind which is occasioned by remorse:

\[ \begin{align*}
\text{Poco \ é \ funesta} \\
\text{Laltrui fortuna} \\
\text{Quando non resta} \\
\text{Ragione alcuna} \\
\text{Ne \ di \ pentirsi, \ né \ darrofllr.}
\end{align*} \]

*Metastasio.*

An atrocious criminal, on the other hand, who brings misfortunes upon himself, excites little pity, for a different reason: his remorse, it is true, aggravates his distress, and swells the first emotions of pity; but then our hatred of him, as a criminal, blending with pity, blunts its edge considerably. Misfortunes that are not innocent, nor highly criminal, partake the advantages of each extreme: they are attended with remorse to embitter the distress, which raises our pity to a great height; and the slight indignation we have at a venial fault, detracts not sensibly from our pity. For that reason, the happiest of all subjects for raising pity, is where a man of integrity falls into a great misfortune by doing an action that is innocent, but which, by some singular means, is conceived by him to be criminal: his remorse aggravates his distress; and our compassion, unrestrained by indignation, knows no bounds. Pity comes thus

* Part 4.
thus to be the ruling passion of a pathetic tragedy; and, by proper representation, may be raised to a height scarce exceeded by any thing felt in real life. A moral tragedy takes in a larger field; as it not only exercises our pity, but raises another passion, which, though selfish, deserves to be cherished equally with the social affection. The passion I have in view is fear or terror; for when a misfortune is the natural consequence of some wrong bias in the temper, every spectator who is conscious of such a wrong bias in himself, takes the alarm, and dreads his falling into the same misfortune: and by that emotion of fear or terror, frequently reiterated in a variety of moral tragedies, the spectators are put upon their guard against the disorders of passion.

The commentators upon Aristotle, and other critics, have been much graved about the account given of tragedy by that author: "That by means of pity and terror, it refines or purifies in us all sorts of passion." But no one who has a clear conception of the end and effects of a good tragedy, can have any difficulty about Aristotle's meaning: our pity is engaged for the persons represented; and our terror is upon our own account. Pity indeed is here made to stand for all the sympathetic emotions, because of these it is the capital. There can be no doubt, that our sympathetic emotions are refined or improved by daily exercise; and in what manner our other passions are refined by terror, I have just now said. One thing is certain, that no other meaning can justly be given to the foregoing doctrine than that now mentioned; and that it was really Aristotle's meaning, appears from his 13th chapter, where he delivers several propositions conformable to the doctrine as here explained. These, at the same time, I take liberty to mention; because, so far as authority can go, they confirm the foregoing reasoning about subjects proper for tragedy. The first proposition is, That it being the province of tragedy to excite pity and terror, an innocent person falling into adversity ought never to be the subject. This proposition is a necessary consequence of his doctrine as explained: a subject of that nature may indeed excite pity and terror; but the former in an inferior degree, and the latter in no degree for moral instruction.
The second proposition is, That the history of a wicked person in a change from misery to happiness, ought not to be represented; which excites neither terror nor compassion, nor is agreeable in any respect. The third is, That the misfortunes of a wicked person ought not to be represented; such representation may be agreeable in some measure upon a principle of justice; but it will not move our pity; nor any degree of terror, except in those of the same vicious disposition with the person represented. The last proposition is, That the only character fit for representation lies in the middle, neither eminently good nor eminently bad; where the misfortune is not the effect of deliberate vice, but of some involuntary fault, as our author expresses it.*

The only objection I find to Aristotle's account of tragedy, is, that he confines it within too narrow bounds, by refusing admittance to the pathetic kind: for if terror be essential to tragedy, no representation deserves that name but the moral kind, where the misfortunes exhibited are caused by a wrong balance of mind, or some disorder in the internal constitution: such misfortunes always suggest moral instruction; and by such misfortunes only, can terror be excited for our improvement.

Thus Aristotle's four propositions above mentioned, relate solely to tragedies of the moral kind. Those of the pathetic kind, are not confined within so narrow limits: subjects fitted for the theatre, are not in such plenty as to make us reject innocent misfortunes which rouse our sympathy, though they inculcate no moral. With respect indeed to subjects of that kind, it may be doubted, whether the conclusion ought not always to be fortunate. Where a person of integrity is represented as suffering to the end under misfortunes purely accidental, we depart discontented, and with some obscure sense of injustice: for seldom is man so submissive to Providence, as not to revolt against the tyranny and vexations

* If one can be amused with a grave discourse which promiseth much and performs nothing, he may see this subject treated by Brumoy in his Theatre Grec. Preliminary discourse on the origin of tragedy.
atons of blind chance; he will be inclined to say, This ought not to be. I give for an example the *Romeo and Juliet* of Shakesppear, where the fatal catastrophe is occasioned by Friar Laurence’s coming to the monument a minute too late: we are vexed at the unlucky chance, and go away dissatisfied. Such impressions, which ought not to be cherished, are a sufficient reason for excluding stories of that kind from the theatre. The misfortunes of a virtuous person, arising from necessary causes or from a chain of unavoidable circumstances, will be considered in a different light: chance making an impression of anarchy and misrule, produces always a gloomy prospect; on the contrary, a regular chain of causes and effects directed by the general laws of nature, never fails to suggest the hand of Providence; to which we submit without resentment, being conscious that submission is our duty. For that reason, we are not disturbed with the distresses of Voltaire’s *Mariamne*, though redoubled on her till her death, without the least fault or failing on her part: her misfortunes are owing to a cause extremely natural, and not unfrequent, the jealousy of a barbarous husband. The fate of Desdemona in the *Moor of Venice*, affects us in the same manner. We are not so easily reconciled to the fate of Cordelia in *King Lear*: the causes of her misfortune are by no means so evident, as to exclude the gloomy notion of chance. In short, a perfect character suffering under misfortunes, is qualified for being the subject of a pathetic tragedy, provided chance be excluded. Nor is a perfect character altogether inconsistent with a moral tragedy: it may successfully be introduced as an under-part, supposing the chief place to be filled with an imperfect character from which a moral can be drawn. This is the case of Desdemona and Mariamne just now mentioned; and it is the case of Monimia and Belvide-ra, in Otway’s two tragedies, *The Orphan*, and *Venice preserv’d*.

I had an early opportunity to unfold a curious doctrine, That fable operates on our passions, by repre-

* See essays on the principles of morality, edit. 2. p. 291.
senting its events as passing in our sight, and by deluding us into a conviction of reality*. Hence, in epic and dramatic compositions, every circumstance ought to be employ'd that may promote the delusion; such as the borrowing from history some noted event, with the addition of circumstances that may answer the author's purpose: the principal facts are known to be true; and we are disposed to extend our belief to every circumstance. But in choosing a subject that makes a figure in history, greater precaution is necessary than where the whole is a fiction. In the latter case there is full scope for invention: the author is under no restraint other than that the characters and incidents be just copies of nature. But, where the story is founded on truth, no circumstances must be added, but such as connect naturally with what are known to be true; history may be supplied, but must not be contradicted: further, the subject chosen must be distant in time, or at least in place; for the familiarity of recent persons and events ought to be avoided. Familiarity ought more especially to be avoided in an epic poem, the peculiar character of which is dignity and elevation: modern manners make but a poor figure in such a poem †.

After Voltaire, no writer, it is probable, will think of rearing an epic poem upon a recent event in the history of his own country. But an event of that kind is perhaps not altogether unqualified for tragedy: it was admitted in Greece; and Shakespeare has employ'd it successfully in several of his pieces. One advantage it possesses above fiction, that of more readily engaging our belief, which tends above any other particular to raise

* Chap. 2. part 1. sect. 7.
† I would not from this observation be thought to undervalue modern manners. The roughness, plainness, and impetuosity of antient manners, may shew better in an epic poem, without being better fitted for society. But without regard to this circumstance, it is the familiarity of modern manners that unqualifies them for a lofty subject. The dignity of our present manners, will be better understood in future ages, when they are no longer familiar.
raise our sympathy. The scene of comedy is generally laid at home; familiarity is no objection; and we are peculiarly sensible of the ridicule of our own manners.

After a proper subject is chosen, the dividing it into parts requires some art. The conclusion of a book in an epic poem, or of an act in a play, cannot be altogether arbitrary; nor be intended for so slight a purpose as to make the parts of equal length. The supposed pause at the end of every book, and the real pause at the end of every act, ought always to coincide with some pause in the action. In this respect, a dramatic or epic poem ought to resemble a sentence or period in language, divided into members that are distinguished from each other by proper pauses; or it ought to resemble a piece of music, having a full close at the end, preceded by imperfect closes that contribute to the melody. Every act in a dramatic poem ought therefore to close with some incident that makes a pause in the action; for otherwise there can be no pretext for interrupting the representation: it would be absurd to break off in the very heat of action; against which every one would exclaim: the absurdity still remains, though the action relents, if it be not actually suspended for some time. This rule is also applicable to an epic poem: though there, a deviation from the rule is less remarkable; because it is in the reader's power to hide the absurdity, by proceeding instantly to another book. The first book of Paradise lost ends without any close, perfect or imperfect: it breaks off abruptly, where Satan, seated on his throne, is prepared to harangue the convocated host of the fall'n angels; and the second book begins with the speech. Milton seems to have copied the Aeneid, of which the two first books are divided much in the same manner. Neither is there any proper pause at the end of the fifth book of the Aeneid. There is no proper pause at the end of the seventh book of Paradise lost, nor at the end of the eleventh.

This branch of the subject shall be closed with a general rule, That action being the fundamental part of every composition whether epic or dramatic, the sentiments and tone of language ought to be subservient to

L 2
the action, so as to appear natural, and proper for the occasion. The application of this rule to our modern plays, would reduce the bulk of them to a skeleton *

After carrying on together epic and dramatic compositions, I proceed to handle them separately, and to mention circumstances peculiar to each; beginning with the epic kind. In a theatrical entertainment, which employs both the eye and the ear, it would be a gross absurdity to introduce upon the stage superior beings in a visible

* En général il y a beaucoup de discours et peu d'action sur la scène Françoise. Quelqu'un difoit en sortant d'une pièce de Denis le Tiran, Je n'ai rien vu, mais j'ai entendu force paroles. Voila ce qu'on peut dire en sortant des pièces Francoises. Racine et Corneille avec tout leur génie ne font eux-mêmes que des parleurs, et leur successeur est le premier qui, à l'imitation des Anglois, ait osé mettre quelquefois la scène en représenta-

Communément tout se passe en beaux dialogues bien agencés, bien ronflans, où l'on voit d'abord que le premier soin de chaque interlocuteur est toujours celui de briller. Presque tout s'enonce en maximes générales. Quelque agités qu'ils puissent être, ils songent toujours plus au public qu'à eux-mêmes; une sentence leur coute moins qu'un sentiment; les pièces de Racine et de Mo-

lière exceptées, le je est presque aussi scrupuleusement banni de la scène Francoise que des écrits de Port-Royal; et les passions humaines, aussi modestes que l'humilité Chrétienne, n'y parlent jamais que par on. Il y a encore une certaine dignité maniérée dans le geste et dans le propos, qui ne permet jamais à la passion de parler exa-

tement son language, ni à l'auteur de revêtir son per-

sonage, et de se transporter au lieu de la scène, mais le tient toujours enchaîné sur le théâtre, et sous les yeux des spectateurs. Aussi les situations les plus vives ne lui fontelles jamais oublier un bel arrangement de phra-

ses, ni des attitudes élégantes; et si le défépoir lui plon-
ge un poignard dans le cœur, non content d'observer la
décence en tombant comme Poixene, il ne tombe point; la décence le maintient debout après sa mort, et tous ceux qui viennent d'expirer s'en retournent l'instant d'après sur leurs jambes. Rousseau.
Ch. XXII. Compositions. 247

a visible shape. There is not place for such objection in an epic poem; and Boileau *, with many other critics, declares strongly for that sort of machinery in an epic poem. But waving authority, which is apt to impose upon the judgment, let us draw what light we can from reason. I begin with a preliminary remark, That this matter is but indistinctly handled by critics: the poetical privilege of animating insensible objects for enlivening a description, is very different from what is termed machinery, where deities, angels, devils, or other supernatural powers, are introduced as real personages, mixing in the action, and contributing to the catastrophe; and yet these two things are constantly jumbled together in the reasoning. The former is founded on a natural principle †: but can the latter claim the same authority? so far from it, that nothing is more unnatural. Its effects, at the same time, are deplorable. First, it gives an air of fiction to the whole; and prevents that impression of reality which is requisite to interest our affections, and to move our passions §: which of itself is sufficient to explode machinery, whatever entertainment it may afford to readers of a fantastic taste or irregular imagination. And, next, were it possible, by disguising the fiction, to delude us into a notion of reality, which I think can hardly be; an insuperable objection would still remain, which is, that the aim or end of an epic poem can never be attained in any perfection where machinery is introduced; for an evident reason, that virtuous emotions cannot be raised successfully but by the actions of those who are endued with passions and affections like our own, that is, by human actions: and as for moral instruction, it is clear, that none can be drawn from beings who act not upon the same principles with us. A fable in Aesop's manner is no objection to this reasoning: his lions, bulls, and goats, are truly men under disguise: they act and feel in every respect as human beings; and the moral we draw is founded on that supposition. Homer, it is true,

* Third part of his art of poetry.
† Chap. 20. sect. 1.
§ See chap. 2. part 1. sect. 7.
true, introduces the gods into his fable: but the religion of his country authorized that liberty; it being an article in the Grecian creed, that the gods often interpose visibly and bodily in human affairs. I must however observe, that Homer’s deities do no honour to his poems: fictions that transgress the bounds of nature, seldom have a good effect; they may inflame the imagination for a moment, but will not be relished by any person of a correct taste. They may be of some use to the lower rank of writers; but an author of genius has much finer materials of Nature’s production, for elevating his subject, and making it interesting.

One would be apt to think, that Boileau, declaring for the Heathen deities as above, intended them only for embellishing the fiction: but unluckily he banishes angels and devils, who undoubtedly make a figure in poetical language, equal to the Heathen deities. Boileau therefore by pleading for the latter in opposition to the former, certainly meant, if he had any distinct meaning, that the Heathen deities may be introduced as actors. And, in fact, he himself is guilty of that glaring absurdity, where it is not so pardonable as in an epic poem: in his ode upon the taking of Namur, he demands with a most serious countenance, whether the walls were built by Apollo or Neptune: and in relating the passage of the Rhine, anno 1672, he describes the god of that river as fighting with all his might to oppose the French monarch; which is confounding fiction with reality at a strange rate. The French writers in general run into this error: wonderful the effect of custom, entirely to hide from them how ridiculous such fictions are!

That this is a capital error in the Gierusalemme liberata, Tasso’s greatest admirers must acknowledge: a situation can never be intricate, nor the reader ever in pain about the catastrophe, so long as there is an angel, devil, or magician, to lend a helping hand. Voltaire, in his essay upon epic poetry, talking of the Pharsalia, observes judiciously, “That the proximity of time, the notoriety of events, the character of the age, enlightened and political, joined with the solidity of Lucan’s subject, deprived him of all liberty of poe-
"tical fiction." Is it not amazing, that a critic who reasons so justly with respect to others, can be so blind with respect to himself? Voltaire, not satisfied to enrich his language with images drawn from invisible and superior beings, introduces them into the action: in the sixth canto of the *Henriade*, St Louis appears in person, and terrifies the soldiers; in the seventh canto, St Louis sends the god of Sleep to Henry; and, in the tenth, the demons of Discord, Fanaticism, War, &c. afflict Annalle in a single combat with Turenne, and are driven away by a good angel brandishing the sword of God. To blend such fictitious personages in the same action with mortals, makes a bad figure at any rate; and is intolerable in a history so recent as that of Henry IV. This singly is sufficient to make the *Henriade* a short-liv'd poem, were it otherwise possessed of every beauty.

I have tried serious reasoning upon this subject; but ridicule, I suppose, will be found a more successful weapon, which Addison has applied in an elegant manner: "Whereas the time of a general peace is, in all appearance, drawing near; being informed that there are several ingenious persons who intend to shew their talents on so happy an occasion, and being willing as much as in me lies, to prevent that effusion of nonsense which we have good cause to apprehend; I do hereby strictly require every person who shall write on this subject, to remember that he is a Christian, and not to sacrifice his catechism to his poetry. In order to it, I do expect of him, in the first place, to make his own poem, without depending upon Phæbus for any part of it, or calling out for aid upon any of the muses by name. I do likewise positively forbid the sending of Mercury with any particular message or dispatch relating to the peace; and shall by no means suffer Minerva to take upon her the shape of any plenipotentiary concerned in this great work. I do further declare, that I shall not allow the destinies to have had an hand in the deaths of the several thousands who have been slain in the late war; being of opinion that all such deaths may be well accounted for by the Christian system of powder.
powder and ball. I do therefore strictly forbid the fates to cut the thread of man's life upon any pretence whatsoever, unless it be for the sake of the rhyme. And whereas I have good reason to fear, that Neptune will have a great deal of business on his hands in several poems which we may now suppose are upon the anvil, I do also prohibit his appearance, unless it be done in metaphor, simile, or any very short allusion; and that even here he may not be permitted to enter, but with great caution and circumspection. I desire that the same rule may be extended to his whole fraternity of Heathen gods; it being my design to condemn every poem to the flames in which Jupiter thunders, or exercises any other act of authority which does not belong to him.

In short, I expect that no Pagan agent shall be introduced, or any fact related which a man cannot give credit to with a good conscience. Provided always, that nothing herein contained shall extend, or be construed to extend, to several of the female poets in this nation, who shall still be left in full possession of their gods and goddesses, in the same manner as if this paper had never been written.*

The marvellous is indeed so much promoted by machinery, that it is not wonderful to find it embraced by the bulk of writers, and perhaps of readers. If indulged at all, it is generally indulged to excess. Homer introduceth his deities with no greater ceremony than his mortals; and Virgil has still less moderation; a pilot spent with watching cannot fall asleep and drop into the sea by natural means: one bed cannot receive the two lovers, Æneas and Dido, without the immediate interposition of superior powers. The ridiculous in such fictions, must appear even through the thickest veil of gravity and solemnity.

Angels and devils serve equally with the Heathen deities as material for figurative language; perhaps better among Christians, because we believe in them, and not in the Heathen deities. But every one is sensible, as well as Boileau, that the invisible powers in our creed make

* Spectator, No 523.
make a much worse figure as actors in a modern poem, than the invisible powers in the Heathen creed did in ancient poems; the cause of which I take to be what follows. The Heathen deities, in the opinion of their votaries, were beings elevated one step only above mankind, subject to the same passions, and directed by the same motives; therefore not altogether improper to mix with men in an important action. In our creed, superior beings are placed at such a mighty distance from us, and are of a nature so different, that with no propriety can we appear with them upon the same stage: man, a creature much inferior, loses all dignity in the comparison.

There can be no doubt, that an historical poem admits the embellishment of allegory, as well as of metaphor, simile, or other figure. Moral truth, in particular, is finely illustrated in the allegorical manner: it animates the fancy to find abstract terms, by a sort of magic, converted into active beings; and it is delightful to trace a general proposition in a pictured event. But allegorical beings should be confined within their own sphere, and never be admitted to mix in the principal action, nor to co-operate in retarding or advancing the catastrophe; which would have a still worse effect than invisible powers; and I am ready to assign the reason. The impression of real existence, essential to an epic poem, is inconsistent with that figurative existence which is essential to an allegory; and therefore no method can more effectually prevent the impression of reality, than the introduction of allegorical beings co-operating with those whom we conceive to be really existing. The love-episode in the *Henriade*, insufferable by the discordant mixture of allegory with real life, is copied from that of Rinaldo and Armida, in the *Jerusalemme liberata*, which hath no merit to intitle it to be copied. An allegorical object, such as Fame in the *Aeneid*, and the Temple of Love in the *Henriade*, may find place in a description: but to introduce Discord as a real personage, imploring the assistance of Love as another real personage, to enervate the courage of the hero, is making

---

* See chap. 20. sect. 6.
† Canto 9.
ing these figurative beings act beyond their sphere, and creating a strange jumble of truth and fiction. The allegory of Sin and Death in the *Paradise Lost*, is, I presume, not generally relished, though it is not entirely of the same nature with what I have been condemning: in a work comprehending the achievements of superior beings, there is more room for fancy than where it is confined to human actions.

What is the true notion of an episode? or how is it to be distinguished from the principal action? Every incident that promotes or retards the catastrophe, must be part of the principal action. This clears the nature of an episode; which may be defined, "An incident connected with the principal action, but contributing neither to advance nor retard it." The descent of Æneas into hell doth not advance nor retard the catastrophe, and therefore is an episode. The story of Nisus and Euryalus, producing an alteration in the affairs of the contending parties, is a part of the principal action. The family-scene in the sixth book of the *Iliad* is of the same nature; for by Hector's retiring from the field of battle to visit his wife, the Grecians had opportunity to breathe, and even to turn upon the Trojans. Such being the nature of an episode, the unavoidable effect of it must be, to break in upon the unity of action; and therefore it ought never to be indulged unless to unbend the mind after the fatigue of a long narration. This purpose of an episode demands the following conditions: it ought to be well connected with the principal action: it ought to be lively and interesting: it ought to be short: and a time ought to be chosen when the principal action relents.*

In the following beautiful episode, which closes the second book of *Fingal*, all these conditions are united.

Comal was a son of Albion; the chief of an hundred hills.

*Homer's description of the shield of Achilles is properly introduced at a time when the action relents, and the reader can bear an interruption. But the author in *Telemachus* describes the shield of that young hero of the midst of battle; a very improper time for an interruption.*
hills. His deet drunk of a thousand streams; and a thousand rocks replied to the voice of his dogs. His face was the mildness of youth; but his hand the death of heroes. One was his love, and fair was she! the daughter of mighty Conloch. She appeared like a sunbeam among women, and her hair was like the wing of the raven. Her soul was fixed on Comal, and she was his companion in the chase. Often met their eyes of love, and happy were their words in secret. But Gormal loved the maid, the chief of gloomy Ardven. He watched her lone steps on the heath, the foe of unhappy Comal.

One day tired of the chase, when the mist had concealed their friends, Comal and the daughter of Conloch met in the cave of Ronan. It was the wonted haunt of Comal. Its sides were hung with his arms; a hundred shields of thongs were there, a hundred helms of foundering steel. Reft here, said he, my love Galvina, thou light of the cave of Ronan: a deer appears on Mora's brow; I go, but soon will return. I fear, said she, dark Gormal my foe: I will rest here; but soon return, my love.

He went to the deer of Mora. The daughter of Conloch, to try his love, cloathed her white side with his armour, and strode from the cave of Ronan. Thinking her his foe, his heart beat high, and his colour changed. He drew the bow: the arrow flew! Galvina fell in blood. He ran to the cave with hasty steps, and called the daughter of Conloch. Where art thou, my love? but no answer? — He marked, at length, her heaving heart beating against the mortal arrow. O Conloch's daughter, is it thou! He sunk upon her breast.

The hunters found the hapless pair. Many and silent were his steps round the dark dwelling of his love. The fleet of the ocean came: he fought, and the strangers fell: he searched for death over the field; but who could kill the mighty Comal? Throwing away his shield, an arrow found his manly breast. He sleeps with his Galvina: their green tombs are seen by the mariner, when he bounds on the waves of the north.

Next, upon the peculiarities of a dramatic poem. And the first I shall mention is a double plot; one of which
which must be of the nature of an episode in an epic poem; for it would distract the spectator, instead of entertaining him, if he were forc'd to attend, at the same time, to two capital plots equally interesting. And even supposing it an under-plot, of the nature of an episode, it seldom hath a good effect in tragedy, of which simplicity is a chief property; for an interesting subject that engages our affections, occupies our whole attention, and leaves no room for any separate concern. Variety is more tolerable in comedy, which pretends only to amuse, without totally occupying the mind.

* Racine, in his preface to the tragedy of Bertrice, is sensible, that simplicity is a great beauty in tragedy, but mistakes the cause. "Nothing (says he) but verisimilitude please in tragedy: but where is the verisimilitude, that within the compass of a day, events should be crowded which commonly are extended through months?" This is mistaking the accuracy of imitation for the probability or improbability of future events. I explain myself. The verisimilitude required in tragedy is, that the actions correspond to the manners, and the manners to nature. When this resemblance is preserved, the imitation is just, because it is a true copy of nature. But I deny, that the verisimilitude of future events, meaning the probability of future events, is any rule in tragedy. A number of extraordinary events, are, it is true, seldom crowded within the compass of a day: but what seldom happens may happen; and when such events fall out, they appear not less natural than the most ordinary accidents. To make verisimilitude in the sense of probability a governing rule in tragedy, would annihilate that sort of writing altogether; for it would exclude all extraordinary events, in which the life of tragedy consists. It is very improbable or unlikely, pitching upon any man at random, that he will sacrifice his life and fortune for his mistress or for his country: yet when that event happens, supposing it conformable to the character, we recognize the verisimilitude as to nature, whatever want of verisimilitude or of probability there was a priori that such would be the event.
But even there, to make a double plot agreeable, is no
flight effort of art: the under plot ought not to vary
greatly in its tone from the principal; for discordan
tions are unpleasant when jumbled together; which,
by the way, is an insuperable objection to tragic com-
dy. Upon that account, I blame the Provok'd Hus-
bond: all the scenes that bring the family of the
Wrongheads into action, being ludicrous and farcical,
are in a very different tone from the principal scences,
displaying severe and bitter expostulations between Lord
Townley and his lady. The same objection touches
not the double plot of the Careless Husband: the dif-
ferent subjects being sweetly connected, and having only
so much variety as to resemble shades of colours harmo-
niously mixed. But this is not all. The under-plot
ought to be connected with that which is principal, so
much at least as to employ the same persons: the un-
der-plot ought to occupy the intervals or pauses of the
principal action; and both ought to be concluded toge-
ther. This is the case of the Merry Wives of Windfor.

Violent action ought never to be represented on the
stage. When the dialogue goes on, a thousand parti-
culars concur to delude us into an impression of reality;
genuine sentiments, passionate language, and persuasive
gesture: the spectator once engaged, is willing to be
deceived, loses sight of himself, and without scruple
enjoys the spectacle as a reality. From this absent flate,
he is roused by a violent action: he wakes as from a
pleasing dream, and gathering his senses about him, finds
all to be a fiction. Horace delivers the same rule; and
finds it upon the same reason:

Ne pueros coram populo Medea trucidet;
Aut humana palam coquat exta nefarius Atreus;
Aut in avem Progne vertatur, Cadmus in anguem:
Quodcumque offendis mihi sic, incredulus odi.

The French critics join with Horace in excluding blood
from the stage; but overlooking the most substantial
objection, they urge only that it is barbarous, and
shocking to a polite audience. The Greeks had no no-
tion of such delicacy, or rather effeminacy; witness the
murder of Clytemnestra by her son Orestes, passing be-
hind
hind the scene, as represented by Sophocles: her voice is heard calling out for mercy, bitter expostulations on his part, loud shrieks upon her being stab'd, and then a deep silence. I appeal to every person of feeling, whether this scene be not more horrible, than if the deed had been committed in sight of the spectators upon a sudden gust of passion. If Corneille, in representing the affair between Horatius and his sister, upon which murder ensues behind the scene, had no other view but to remove from the spectators a shocking action, he certainly was in a capital mistake: for murder in cold blood, which in some measure was the case as represented, is more shocking to a polite audience, even where the conclusive stab is not seen, than the same act performed in their presence, when it is occasioned by violent and unpremeditated passion, as suddenly repent-ed of as committed. I heartily agree with Addison*, that no part of this incident ought to have been represented, but reserved for a narrative, with every alleviating circumstance in favour of the hero. This is the only method to avoid the difficulties that unqualify this incident for representation, a deliberate murder on the one hand, and on the other a violent action performed on the stage, which must rouse the spectator from his dream of reality.

A few words upon the dialogue, which ought to be so conducted as to be a true representation of nature. I talk not here of the sentiments, nor of the language; for these come under different heads: I talk of what properly belongs to dialogue-writing; where every single speech, short or long, ought to arise from what is said by the former speaker, and furnish matter for what comes after, till the end of the scene. In that view, the whole speeches, from first to last, represent so many links, all connected together in one regular chain. No author, antient or modern, possesseth the art of dialogue equal to Shakespear. Dryden, in that particular, may justly be placed as his opposite: he frequently introduces three or four persons speaking upon the same subject.
subject, each throwing out his own notions separately, without regarding what is said by the rest; take for an example the first scene of Aurengzebe: sometimes he makes a number club in relating an event, not to a stranger, supposed ignorant of it, but to one another, for the sake merely of speaking: of which notable sort of dialogue, we have a specimen in the first scene of the first part of the Conquest of Granada. In the second part of the same tragedy, scene second, the King, Abenamar, and Zuleina, make their separate observations, like to many soliloquies, upon the fluctuating temper of the mob: a dialogue so uncouth, puts one in mind of two shepherds in a pastoral, excited by a prize to pronounce verses alternately, each in praise of his own mistress.

This manner of dialogue-writing, beside an unnatural air, has another bad effect: it stays the course of the action, because it is not productive of any consequence. In Congreve's comedies, the action is often suspended to make way for a play of wit. But of this more particularly in the chapter immediately following.

No fault is more common among writers, than to prolong a speech after the impatience of the person to whom it is addressed ought to prompt him or her to break in. Consider only how the impatient actor is to behave in the mean time. To express his impatience in violent action without interrupting, would be unnatural; and yet to dissemble his impatience by appearing cool where he ought to be highly inflamed, would be not less so.

Rhyme being unnatural and disgusting in dialogue, is happily banished from our theatre: the only wonder is that it ever found admittance, especially among a people accustomed to the more manly freedom of Shakespeare's dialogue. By banishing rhyme, we have gained so much as never once to dream that there can be any further improvement. And yet, however suitable blank verse may be to elevated characters and warm passions, it must appear improper and affected in the mouths of the lower sort. Why then should it be a rule, That every scene in tragedy must be in blank verse? Shakespeare,
ear, with great judgment, has followed a different rule; which is, to intermix prose with verse, and only to employ the latter where it is required by the importance or dignity of the subject. Familiar thoughts and ordinary facts ought to be expressed in plain language: to hear for example a footman deliver a simple message in blank verse, must appear ridiculous to every one who is not biaffed by custom. In short, that variety of characters and of situations, which is the life of a play, requires not only a suitable variety in the sentiments, but also in the diction.

C H A P. XXIII. T H E T H R E E U N I T I E S.

T H E first chapter accounts for the pleasure we have in a chain of connected facts. In histories of the world, of a country, of a people, this pleasure is but faint; because the connections are flight or obscure. We find more entertainment in biography, where the incidents are connected by their relation to one person, who makes a figure, and commands our attention. But the greatest entertainment of the kind, is in the history of a single event, supposing it interesting; and the reason is, that the facts and circumstances are connected by the strongest of all relations, that of cause and effect: a number of facts that give birth to each other form a delightful train; and we have great mental enjoyment in our progress from the beginning to the end. But this subject merits a more particular discussion.

When we consider the chain of causes and effects in the material world, independent of purpose, design, or thought, we find a number of incidents in succession, without beginning, middle, or end: every thing that happens is, in different respects, both a cause and an effect; being the effect of what goes before, and the cause of what follows: one incident may affect us more, another less; but all of them, important and trivial, are so many links in the universal chain: the mind, in viewing these incidents, cannot rest or settle ultimately upon any one; but is carried along in the train without any close.

But when the intellectual world is taken under view,
in conjunction with the material, the scene is varied. Man acts with deliberation, will, and choice: he aims at some end, glory, for example, or riches, or conquest, the procuring happiness to individuals, or to his country in general: he proposes means, and lays plans to attain the end proposed. Here are a number of facts or incidents leading to the end in view, the whole connected into one chain by the relation of causation. In running over a series of such facts or incidents, we cannot rest upon any one; because they are presented to us as means only, leading to some end: but we rest with satisfaction upon the ultimate event; because there the purpose or aim of the chief person or persons, is completed, and brought to a final conclusion. This indicates the beginning, the middle, and the end, of what Aristotle calls an entire action*. The story naturally begins with describing those circumstances which move the distinguished person to form a plan, in order to compass some desired event: the prosecution of that plan and the obstructions, carry the reader into the heat of action: the middle is properly where the action is the most involved; and the end is where the event is brought about, and the plan accomplished.

A plan thus happily perfected after many obstructions, affords wonderful delight to the reader; to produce which, a principle mentioned above † mainly contributes, the same that disposes the mind to complete every work commenced and in general to carry every thing to its ultimate conclusion.

I have given the foregoing example of a plan crowned with success, because it affords the clearest conception of a beginning, a middle, and an end, in which consists unity of action; and indeed stricter unity cannot be imagined than in that case. But an action may have unity, or a beginning, middle, and end, without to intimate a relation of parts; as where the catastrophe is different from what is intended or desired; which frequently happens in our best tragedies. In the Aeneid, the hero, after many obstructions, brings his plan to perfection. The Iliad is formed upon a different model:

* Poet. cap. 6. See also cap. 7. † Chap. 8.
it begins with the quarrel between Achilles and Agamemnon; goes on to describe the several effects produced by that cause; and ends in a reconciliation. Here is unity of action, no doubt, a beginning, a middle, and an end; but inferior to that of the Æneid: which will thus appear. The mind hath a propensity to go forward in the chain of history: it keeps always in view the expected event; and when the incidents or underparts are connected together by their relation to the event, the mind runs sweetly and easily along them. This pleasure we have in the Æneid. It is not altogether so pleasant, as in the Iliad, to connect effects by their common cause; for such connection forces the mind to a continual retrospect: looking backward is like walking backward.

Homer's plan is still more defective, for another reason. That the events described are but imperfectly connected with the wrath of Achilles, their cause: his wrath did not exert itself in action; and the misfortunes of his countrymen were but negatively the effects of his wrath, by depriving them of his assistance.

If unity of action be a capital beauty in a fable imitative of human affairs, a plurality of unconnected fables must be a capital defect. For the sake of variety, we indulge an under-plot that is connected with the principal defect: but two unconnected events are a great deformity; and it lessens the deformity but a very little, to engage the same actors in both. Ariosto is quite licentious in that particular: he carries on at the same time a plurality of unconnected stories. His only excuse is, that his plan is perfectly well adjusted to his subject; for every thing in the Orlando Furioso is wild and extravagant.

Though to state facts according to the order of time is natural, yet that order may be varied for the sake of conspicuous beauties *. If, for example, a noted story, cold and simple in its first movements, be made the subject of an epic poem, the reader may be hurried into the heat of action; reserving the preliminaries for a conversation-piece, if it shall be thought necessary; and that

* See chap. 1.
that method, at the same time, being dramatic, hath a peculiar beauty, which narration cannot reach *. But a privilege that deviates from nature ought to be sparingly indulged; and yet with respect to that privilege, romance-writers have no moderation: they make no difficulty of presenting to the reader, without the least preparation, unknown persons engaged in some arduous adventure equally unknown. In Caiusandra, two personages, who afterward are discovered to be the heroes of the story, start up completely armed upon the banks of the Euphrates, and engage in a single combat †.

A play analysed, is a chain of connected facts, of which each scene makes a link. Each scene, accordingly, ought to produce some incident relative to the catastrophe or ultimate event, by advancing or retarding it. A scene that produceth no incident, and for that reason may be termed barren, ought not to be indulged, because it breaks the unity of action: a barren scene can never be intituled to a place, because the chain is complete without it. In the Old Bachelor, the 3d scene of act 2, and all that follow to the end of that act, are mere conversation-pieces, without any consequence. The 10th and 11th scenes, act 3. Double Dealer, the 10th, 11th, 12th, 13th, and 14th scenes, act 1. Love for Love, are of the same kind. Neither is The way of the World entirely guilty of such scenes. It will be no justification, that they help to display characters: it were better, like Dryden in his dramatis personae, to describe characters beforehand, which would not break the chain of action. But a writer of genius has no occasion for such artifice: he can display the characters of his personages much more to the life in sentiments.

* See chap. 21.
† I am sensible that a commencement of this sort is much relished by certain readers disposed to wonder. Their curiosity is raised, and they are much tickled in its gratification. But curiosity is at an end with the first reading, because the personages are no longer unknown; and therefore at the second reading a commencement so artificial, loses all its power even over the vulgar. A writer of genius loves to deal in lafting beauties.
sentiment and action. How successfully is this done by
Shakespeare! in whose works there is not to be found a
single barren scene.

Upon the whole, it appears, that all the facts in an
historical fable, ought to have a mutual connection, by
their common relation to the grand event or catastrophe.
And this relation, in which the unity of action consists,
is equally essential to epic and dramatic compositions.

In handling unity of action, it ought not to escape
observation, that the mind is satisfied with lighter unity
in a picture than in a poem; because of the perceptions
of the former are more lively than the ideas of the
latter. In Hogarth's Enraged Musician, we have a col-
lection of every grating found in nature, without any
mutual connection except that of place. But the hor-
ror they give to the delicate ear of an Italian fidler, who
is represented almost in convulsions, bestows unity up-
on the piece, with which the mind is satisfied.

How far the unities of time and of place are essentia-
is a question of greater intricacy. These unities were
strictly observed in the Grecian and Roman theatres;
and they are inculcated by the French and English cri-
tics, as essential to every dramatic composition. In
theory, these unities are also acknowledged by our best
poets, though their practice seldom corresponds: they
are often forc'd to take liberties, which they pretend not
to justify, against the practice of the Greeks and Ro-
mans, and against the solemn decision of their own coun-
trymen. But in the course of this inquiry it will be
made evident, that in this article we are under no ne-
cessity to copy the antients, and that our critics are guil-
ty of a mistake, in admitting no greater latitude of place
and time than was admitted in Greece and Rome.

Suffer me only to premise, that the unities of place
and time, are not, by the most rigid critics, required in
a narrative poem. In such composition, if it pretend
to copy nature, these unities would be absurd; because
real events are seldom confined within narrow limits ei-
er of place or of time: and yet we can follow histo-
ry, or an historical fable, through all its changes, with
the greatest facility: we never once think of measuring
the real time by what is taken in reading; nor of form-

ing any connection between the place of action and that which we occupy.

I am sensible, that the drama differs so far from the epic, as to admit different rules. It will be observed, "That an historical fable, which affords entertainment by reading solely, is under no limitation of time nor of place, more than a genuine history; but that a dramatic composition cannot be accurately represented, unless it be limited, as its representation is, to one place and to a few hours; and therefore that no fable can be admitted but what has these properties, because it would be absurd to compose a piece for representation that cannot be justly represented." This argument, I acknowledge, has at least a plausible appearance; and yet one is apt to suspect some fallacy, considering that no critic, however strict, has ventured to confine the unities of place and of time within so narrow bounds.

A view of the Grecian drama, compared with our own, may perhaps relieve us from this dilemma: if they be differently constructed, as shall be made evident, it is possible that the foregoing reasoning may not be applicable with equal force to both. This is an article, that, with relation to the present subject, has not been examined by any writer.

All authors agree, that tragedy in Greece was derived from the hymns in praise of Bacchus, which were sung in parts by a chorus. Thespis, to relieve the singers and for the sake of variety, introduced one actor; whose province it was to explain historically the subject of the song, and who occasionally represented one or other

* Boffu, after observing, with wonderful critical sagacity, that winter is an improper season for an epic poem, and night not less improper for tragedy; admits however, that an epic poem may be spread through the whole summer months, and a tragedy through the whole sun-shine hours of the longest summer-day. Du poème épique, l. 3. chap. 12. At that rate an English tragedy may be longer than a French tragedy; and in Nova Zembla the time of a tragedy and of an epic poem may be the same.
other personage. Eschylus, introducing a second actor, formed the dialogue; by which the performance became dramatic; and the actors were multiplied when the subject represented made it necessary. But still, the chorus, which gave a beginning to tragedy, was considered as an essential part of its constitution. The first scene, generally, unfolds the preliminary circumstances that lead to the grand event; and this scene is by Aristotle termed the prologue. In the second scene, where the action properly begins, the chorus is introduced, which, as originally, continues upon the stage during the whole performance: the chorus frequently mix in the dialogue; and when the dialogue happens to be suspended, the chorus, during the interval, are employ'd in singing. Sophocles adheres to that plan religiously. Euripides is not altogether so correct. In some of his pieces it becomes necessary to remove the chorus: but when that unusual step is risked, matters are so ordered as to make their absence but momentary. Nor does the removal of the chorus interrupt the representation: they never leave the stage of their own accord, but at the command of some principal personage, who constantly wait their return. Thus the Grecian drama is a continued representation without any interruption; a circumstance that merits attention. A continued representation without a pause, affords not opportunity to vary the place of action, nor to prolong the time of the action beyond that of the representation. To a representation so confined in place and time, the foregoing reasoning is strictly applicable: a real or feigned action that is brought to a conclusion after considerable intervals of time and frequent changes of place, cannot accurately be copied in a representation that admits no latitude in either. Hence it is, that the unities of place and of time, were, or ought to have been, strictly observed in the Grecian tragedies; which is made necessary by the very constitution of their drama, for it is absurd to compose a tragedy that cannot be justly represented.

Modern critics, who for our drama pretend to establish rules founded on the practice of the Greeks, are guilty of an egregious blunder. The unities of place and
and of time, so much vaunted, were in Greece, as we see, a matter of necessity, not of choice; and I am now ready to shew, that if we submit to such fetters, it must be from choice, not necessity. This will be evident upon taking a view of the constitution of our drama, which differs widely from that of Greece; whether more or less perfect, is a different point, which shall be handled afterward. By dropping the chorus, opportunity is afforded to divide the representation by intervals of time, during which the stage is totally evacuated and the spectacle suspended. This constitution qualifies our drama for subjects spread through a wide space both of time and of place: the time supposed to pass during the suspension of the representation, is not measured by the time of the suspension: nor is any connection formed, between the box we sit in, and the place where things are supposed to be transacted in our absence: by which means, many subjects can be justly represented in our theatres, that were excluded from those of antient Greece. This doctrine may be illustrated, by comparing a modern play to a set of historical pictures; let us suppose them five in number, and the resemblance will be complete: each of the pictures resembles an act in one of our plays: there must necessarily be the strictest unity of place and of time in each picture; and the same necessity requires these two unities during each act of a play, because during an act there is no interruption in the spectacle. Now, when we view in succession a number of such historical pictures, let it be, for example, the history of Alexander by Le Brun, we have no difficulty to conceive, that months or years have passed between the events exhibited in two different pictures, though the interruption is imperceptible in passing our eye from the one to the other; and we have as little difficulty to conceive a change of place, however great: in which view, there is truly no difference between five acts of a modern play, and five such pictures. Where the representation is suspended, we can with the greatest facility suppose any length of time or any change of place: the spectator, it is true, may be conscious, that the real time and place are not the same with what are employ'd in the representation; but this is a work of
of reflection; and by the same reflection he may also
be conscious, that Garrick is not King Lear, that the
playhouse is not Dover cliffs, nor the noise he hears
thunder and lightning. In a word, after an interrupti-
on of the representation, it is not more difficult for a
spectator to imagine a new place, or a different time,
than at the commencement of the play, to imagine him-
self at Rome, or in a period of time two thousand years
back. And indeed, it must appear ridiculous, that a
critic, who is willing to hold candle-light for sun-shine,
and some painted canvasses for a palace or a prison,
should affect so much difficulty in imagining a latitude
of place or of time in the story, beyond what is neces-
sary in the representation.

There are, I acknowledge, some effects of great la-
titude in time that ought never to be indulged in a com-
position for the theatre: nothing can be more absurd,
than at the close to exhibit a full-grown person who
appears a child at the beginning: the mind rejects, as
contrary to all probability, such latitude of time as is
requisite for a change so remarkable. The greatest
change from place to place hath not altogether the same
bad effect: in the bulk of human affairs place is not
material; and the mind, when occupied with an inter-
esting event, is little regardful of minute circumstances:
these may be varied at will, because they scarce make
any impression.

But though I have thus taken arms to rescue modern
poets from the despotism of modern critics, I would not
be understood to justify liberty without any referve. An
unbounded licence with relation to place and time, is
faulty for a reason that seems to have been overlooked,
that it seldom fails to break in upon the unity of action:
in the ordinary course of human affairs, single events,
such as are fit to be represented on the stage, are confi-
ned to a narrow spot, and generally employ no great
extent of time: we accordingly seldom find strict unity
of action in a dramatic composition, where any remark-
able latitude is indulged in these particulars. I must
say further, that a composition which employs but one
place, and requires not a greater length of time than is
necessary for the representation, is so much the more
perfect:
perfection: because the confining an event within so narrow bounds, contributes to the unity of action; and also prevents that labour, however slight, which the mind must undergo in imagining frequent changes of place and many intervals of time. But still I must insist, that such limitation of place and time as was necessary in the Grecian drama, is no rule to us; and therefore, that though such limitation adds one beauty more to the composition, it is at best but a refinement, which may justly give place to a thousand beauties more substantial. And I may add, that it is extremely difficult, if not impracticable, to contract within the Grecian limits, any fable so fruitful of incidents in number and variety, as to give full scope to the fluctuation of passion.

It may now appear, that critics who put the unities of place and of time upon the same footing with the unity of action, making them all equally essential, have not attended to the nature and constitution of the modern drama. If they admit an interrupted representation, with which no writer finds fault, it is plainly absurd to condemn its greatest advantage, that of representing many interesting subjects excluded from the Grecian stage. If there needs must be a reformation, why not restore the antient chorus and the antient continuity of action? There is certainly no medium: for to admit an interruption without relaxing from the strict unities of place and of time, is in effect to load us with all the inconveniences of the antient drama, and at the same time to withhold from us its advantages.

And therefore the only proper question is, Whether our model be or be not a real improvement? This indeed may fairly be called in question; and in order to a comparative trial, some particulars must be premised. When a play begins, we have no difficulty to adjust our imagination to the scene of action, however distant it be in time or in place; because we know that the play is a representation only. Our situation is very different after we are engaged: it is the perfection of representation to hide itself, to impose upon the spectator, and to produce in him an impression of reality, as if he were
spectator of a real event*; but any interruption anni-
hilates that impression, by rousing him out of his wak-
ing dream, and unhappily restoring him to his senses. So
difficult it is to support the impression of reality, that
much slighter interruptions than the interval between
two acts are sufficient to dissolve the charm: in the 5th
act of the Mourning Bride, the three first scenes are in
a room of state, the fourth in a prison; and the change
is operated by shifting the scene, which is done in a trice:
but however quick the transition may be, it is imprac-
ticable to impose upon the spectators so as to make them
conceive that they are actually carried from the palace
to the prison: they immediately reflect, that the palace
and prison are imaginary, and that the whole is a fiction.
From these premises one will naturally be led, at
first view, to pronounce the frequent interruptions in
the modern drama to be an imperfection. It will occur,
"That every interruption must have the effect to banish
the dream of reality, and with it to banish our con-
cern, which cannot subsist while we are conscious
that all is a fiction; and therefore, that in the modern
drama sufficient time is not afforded for fluctuation
and dwelling of passion, like what is afforded in that
of Greece, where there is no interruption." This
reasoning, it must be owned, has a specious appearance:
but we must not become faint-hearted upon the first
repulse; let us rally our troops for a second engage-
ment.
Considering attentively the antient drama, we find,
that though the representation is never interrupted, the
principal action is suspended not less frequently than in
the modern drama: there are five acts in each; and
the only difference is, that in the former, when the ac-
tion is suspended as it is at the end of every act, op-
portunity is taken of the interval to employ the chorus
in singing. Hence it appears, that the Grecian con-
tinuity of representation cannot have the effect to prolong
the impression of reality: to banish that impression, a
suspension of the action while the chorus is employ'd in
singing,
singing, is not less operative than a total suspension of the representation.

But to open a larger view, I am ready to show, that a continued representation, without a single pause even in the principal action, so far from an advantage, would be an imperfection; and that a representation with proper pauses, is better qualified for moving the audience, and for making deep impressions. This will be evident from the following considerations. Representations cannot very long support an impression of reality; for when the spirits are exhausted by close attention and by the agitation of passion, an uneasiness ensues, which never fails to banish the waking dream. Now supposing that an act requires as much time as can be employ'd with strict attention upon any incident, a supposition that cannot be far from truth; it follows, that the impression of reality would not be prolonged beyond the time of an act, even supposing a continued representation. If so, a continued representation of longer endurance than an act, instead of giving scope to fluctuation and swelling of passion, would overstrain the attention, and produce a total absence of mind. In this respect, the four pauses have a fine effect: for by affording to the audience a reasonable respite when the impression of reality is gone, and while nothing material is in agitation, they relieve the mind from its fatigue; and consequently prevent a wandering of thought at the very time possibly of the most interesting scenes.

In one article, indeed, the Grecian model has greatly the advantage: its chorus, during an interval, not only preserves alive the impressions made upon the audience, but also prepares their hearts finely for new impressions. In our theatres, on the contrary, the audience, at the end of every act, being left to trifle time away, lose every warm impression; and they begin the next act cool and unconcerned, as at the commencement of the representation. This is a gross malady in our theatrical representations; but a malady that luckily is not incurable: to revive the Grecian chorus, would be to revive the Grecian flavour of place and time; but I can figure a detached chorus coinciding with a pause in the representation, as the antient chorus did with a
pfause in the principal action. What objection, for example, can there lie against music between the acts, vocal and instrumental, adapted to the subject? Such detached chorus, without putting us under any limitation of time or place, would recruit the spirits, and would preserve entire, the tone, if not the tide, of passion: the music, after an act, should commence, in the tone of the preceding passion, and be gradually varied till it accord with the tone of the passion that is to succeed in the next act. The music and the representation would both of them be gainers by their conjunction; which will thus appear. Music that accords with the present tone of mind, is, upon that account, doubly agreeable; and accordingly, though music singly hath not power to raise a passion, it tends greatly to support a passion already raised. Further, music prepares us for the passion that follows, by making cheerful, tender, melancholy, or animated impressions, as the subject requires. Take for an example the first scene of the Mourning Bride, where soft music in a melancholy strain, prepares us finely for Almeria's deep distress. In this manner, music and representation support each other delightfully: the impression made upon the audience by representation, is a fine preparation for the music that succeeds; and the impression made by the music, is a fine preparation for the representation that succeeds. It appears to me evident, that, by some such contrivance, the modern drama may be improved, so as to enjoy the advantage of the ancient chorus without its servile limitation of place and time. And as to music in particular, I cannot figure any thing that would tend more to its improvement: composers, those for the stage at least, would be reduced to the happy necessity of studying and imitating nature; instead of deviating, according to the present mode, into wild, fantastic, and unnatural conceits. But we must return to our subject, and finish the comparison between the ancient and the modern drama.

The numberless improprieties forced upon the Greek dramatic poets by the constitution of their drama, are of themselves, one should think, a sufficient reason for preferring that of the moderns, even abstracting from the improvement proposed. To prepare the reader for this article,
article, it must be premised, that as in the antient drama the place of action never varies, a place necessarily must be chosen, to which every person may have access without any improbability. This confines the scene to some open place, generally the court or area before a palace; which excludes from the Grecian theatre transactions within doors, though these commonly are the most important. Such cruel restraint is of itself sufficient to cramp the most pregnant invention; and accordingly the Grecian writers, in order to preserve unity of place, are reduced to woful improprieties. In the Hippolytus of Euripides*, Phedra, distressed in mind and body, is carried without any pretext from her palace to the place of action; is there laid upon a couch, unable to support herself upon her limbs, and made to utter many things improper to be heard by a number of women who form the chorus: and what is still worse, her female attendant uses the strongest entreaties to make her reveal the secret cause of her anguish; which at last Phedra, contrary to decency and probability, is prevailed upon to do in presence of that very chorus†. Alcestes, in Euripides, at the point of death, is brought from the palace to the place of action, groaning, and lamenting her untimely fate‡. In the Trachiniens of Sophocles||, a secret is imparted to Dejanira, the wife of Hercules, in presence of the chorus. In the tragedy of Iphigenia, the messenger employ’d to inform Clytemnestra that Iphigenia was sacrificed, stops short at the place of action, and with a loud voice calls the Queen from her palace to hear the news. Again, in the Iphigenia in Tauris, the necessary presence of the chorus forces Euripides in a gross absurdity, which is to form a secret in their hearing§; and to disguise the absurdity, much courtship is bestowed on the chorus, not one woman but a number, to engage them to secrecy. In the Medea of Euripides, that princess makes no difficulty, in presence of the chorus, to plot the death of her husband, of his mistress, and of her father the King of Corinth, all by poison: it was necessary to bring Medea upon the stage, and

and there is but one place of action, which is always occupied by the chorus. This scene closes the second act; and in the end of the third, she frankly makes the chorus her confidents in plotting the murder of her own children. Terence, by identity of place, is often forc'd to make a conversation within doors be heard on the open street: the cries of a woman in labour are there heard distinctly.

The Grecian poets are not more happy with respect to time than with respect to place. In the *Hippolytus* of Euripides, that prince is banished at the end of the fourth act; and in the first scene of the following act, a messenger relates to Theseus the whole particulars of the death of Hippolytus by the sea monster: that remarkable event must have employ'd many hours; and yet in the representation it is confined to the time employ'd by the chorus upon the song at the end of the 4th act. The inconstancy is still greater in the *Iphigenia in Tauris*: the song could not exhaust half an hour; and yet the incidents supposed to have happened during that time, could not naturally be transacted in less than half a day.

The Grecian artists are forc'd, not less frequently, to transgress another rule, derived also from a continued representation: the rule is, that as a vacancy, however momentary, interrupts the representation, it is necessary that the place of action be constantly occupied. Sophocles, with regard to that rule as well as to others, is generally correct. But Euripides cannot bear such restraint: he often evacuates the stage, and leaves it empty for others in succession. *Iphigenia in Tauris*, after pronouncing a soliloquy in the first scene, leaves the place of action, and is succeeded by Orestes and Pylades: they, after some conversation, walk off; and Iphigenia re-enters, accompanied with the chorus. In the *Alcestes*, which is of the same author, the place of action is void at the end of the third act. It is true, that to cover the irregularity and to preserve the representation in motion, Euripides is extremely careful to fill the stage without loss of time: but this is still an interruption,

* Act 5. ic. 4.
interruption, and a link of the chain broken; for during the change of the actors, there must be a space of time, during which the stage is occupied by neither set. It makes indeed a more remarkable interruption, to change the place of action as well as the actors; but that was not practicable upon the Grecian stage.

It is hard to say upon what model Terence has formed his plays. Having no chorus, there is a cessation of the representation at the end of every act: but advantage is not taken of the cessation, even to vary the place of action; for the street is always chosen, where every thing passing may be seen by every person; and by that choice, the most sprightly and interesting parts of the action, which commonly pass within doors, are excluded; witness the last act of the Eunuch. He hath submitted to the like slavery with respect to time. In a word, a play with a regular chorus, is not more confined in place and time than his plays are. Thus a zealous scettary follows implicitly antient forms and ceremonies, without once considering whether their introducative cause be still subsisting. Plautus, of a bolder genius than Terence, makes good use of the liberty afforded by an interrupted representation: he varies the place of action upon all occasions, when the variation suits his purpose.

The intelligent reader will by this time understand, that I plead for no change of place in our plays but after an interval, nor for any latitude in point of time but what falls in with an interval. The unities of place and time ought to be strictly observed during each act; for during the representation, there is no opportunity for the smallest deviation from either. Hence it is an essential requisite, that during an act the stage be always occupied; for even a momentary vacuity makes an interval or interruption. Another rule is not less essential: it would be a gross breach of the unity of action, to exhibit upon the stage two separate actions at the same time; and therefore, to preserve that unity, it is necessary that each personage introduced during an act, be linked to those in possession of the stage, so as to join all in one action. These things follow from the very conception of an act, which admits not the slightest interruption:
interruption: the moment the representation is inter-
mittled, there is an end of that act; and we have no
other notion of a new act, but where, after a pause or
interval, the representation is again put in motion.
French writers, generally speaking, are extremely cor-
rect in this particular: the English, on the contrary,
are so irregular as scarce to deserve a criticism; actors
not only succeed each other in the same place without
connection, but what is still worse, they frequently
succeed each other in different places. This change of
place in the same act, ought never to be indulged; for,
beside breaking the unity of the act, it has a disagreea-
ble effect: after an interval, the imagination readily a-
daps itself to any place that is necessary, just as readi-
ly as at the commencement of the play; but during the
representation, we reject change of place. From the
foregoing cenfure must be excepted the Mourning Bride
of Congreve, where regularity concurs with the beauty
of sentiment and of language, to make it one of the
most complete pieces England has to boast of. I must
acknowledge, however, that in point of regularity, this
elegant performance is not altogether unexceptionable.
In the four first acts, the unities of place and time are
strictly observed: but in the last act, there is a capital
error with respect to unity of place; for in the three
first scenes of that act, the place of action is a room of
state, which is changed to a prison in the fourth scene:
the chain also of the actors is broken; as the persons
introduced in the prison, are different from those who
made their appearance in the room of state. This re-
markable interruption of the representation, makes in
effect two acts instead of one: and therefore, if it be
a rule that a play ought not to consist of more acts than
five, this performance is so far defective in point of re-
gularity. I may add, that even admitting six acts, the
irregularity would not be altogether removed, without
a longer pause in the representation than is allowed in
the acting; for more than a momentary interruption is
requisite for enabling the imagination readily to fall in
with a new place, or with a wide space of time. In The Way of the World, of the same author, unity of
place is preserved during every act, and a stricter unity
of time during the whole play than is necessary.

C H A P.
The books we have upon architecture and upon embellishing ground, abound in practical instruction, necessary for a mechanic; but in vain would we rummage them for rational principles to improve our taste. In a general system, it might be thought sufficient to have unfolded the principles that govern these and other fine arts, leaving the application to the reader; but as I would neglect no opportunity of showing the extensive influence of these principles, the purpose of the present chapter is to apply them to gardening and architecture; but without intending any regular plan of these favourite arts, which would be unsuitable to the nature of this work, and not less so to the inexperience of its author.

Gardening was at first an useful art: in the garden of Alcinoous, described by Homer, we find nothing done for pleasure merely. But gardening is now improved into a fine art; and when we talk of a garden without any epithet, a pleasure-garden, by way of eminence, is understood: the garden of Alcinoous, in modern language, was but a kitchen-garden. Architecture has run the same course: it continued many ages an useful art merely, before it aspired to be classed with the fine arts. Architecture therefore and gardening must be handled in a twofold view, being useful arts as well as fine arts. The reader however will not here expect rules for improving any work of art in point of utility; it being no part of my plan to treat of any useful art as such: but there is a beauty in utility; and in discoursing of beauty, that of utility must not be neglected. This leads us to consider gardens and buildings in different views: they may be destined for use solely, for beauty solely, or for both. Such variety of destination, bestows upon these arts a great command of beauties, complex not less than various. Hence the difficulty of forming an accurate taste in gardening and architecture; and hence that difference and wavering.
of taste in these arts, greater than in any art that has but a single destination.

Architecture and gardening cannot otherwise entertain the mind, but by raising certain agreeable emotions or feelings; and with these we must begin, as the true foundation of all the rules of criticism that govern those arts. Poetry, as to its power of raising emotions, pos
tesses justly the first place among the fine arts; for scarce any one emotion of human nature is beyond its reach. Painting and sculpture are more circumscribed, having the command of no emotions but of what are produced by sight: they are peculiarly successful in expressing painful passions, which are display'd by external signs extremely legible*. Gardening, beside the emotions of beauty, by means of regularity, order, proportion, colour, and utility, can raise emotions of grandeur, of sweetness, of gaiety, melancholy, wildness, and even of surprise or wonder. In architecture, regularity, order, and proportion, and the beauties that result from them, are still more conspicuous than in gardening; but as to the beauty of colour, architecture is far inferior. Grandeur can be expressed in a building, perhaps more successfully than in a garden; but as to the other emotions above mentioned, architecture hitherto has not been brought to the perfection of expressing them distinctly. To balance that defect, architecture can display the beauty of utility in the highest perfection.

Gardening indeed possesses one advantage, never to be equalled in the other art; which is, that it is capable, in various scenes, to raise successively all the different emotions above mentioned. But to operate that delicious effect, the garden must be extensive, so as to admit a slow succession: for a small garden, comprehended at one view, ought to be confined to one expression†; it may be gay, it may be sweet, it may be gloomy; but an attempt to mix these, would create a jumble of emotions not a little unpleasant. For the same reason, a building, even the most magnificent, is necessarily confined to one expression.

Architecture, considered as a fine art, instead of ri

* See chap. 15. † See chap. 8.
valing gardening in its progress toward perfection, seems not far advanced beyond its infant state. To bring it to maturity, two things mainly are wanted. First, a greater variety of parts and ornaments than at present it seems provided with. Gardening here has greatly the advantage: it is provided with such plenty of materials, as to raise scenes without end, affecting the spectator with variety of emotions. In architecture, on the contrary, materials are so scanty, that artists hitherto have not been successful in raising any emotions but of beauty and grandeur: with respect to the former, there are indeed plenty of means, regularity, order, symmetry, simplicity, utility; and with respect to the latter, the addition of size is sufficient. But though it be evident, that every building ought to have a certain character or expression suitable to its destination; yet this refinement has scarce been attempted by any artist. A death's head and bones employ'd in monumental buildings, will indeed produce an emotion of gloom and melancholy; but every ornament of that kind, if these can be termed so, ought to be rejected, because they are in themselves disagreeable. The other thing wanted to bring the art to perfection, is, to ascertain the precise impression made by every single part and ornament, cupolas, spires, columns, carvings, statues, vases, &c. For in vain will an artist attempt rules for employing these, either singly or in combination, until the different emotions they produce be distinctly explained. Gardening in that particular also, hath the advantage: the several emotions raised by trees, rivers, cascades, plains, eminencies, and other materials it employs, are understood; and each emotion can be described with some degree of precision, which is done occasionally in the foregoing parts of this work.

In gardening as well as in architecture, simplicity ought to be the ruling principle. Profuse ornament hath no better effect than to confound the eye, and to prevent the object from making an impression as one entire whole. An artist delirious of genius for capital beauties, is naturally prompted to supply the defect by crowding his plan with slight embellishments: hence in a garden, triumphal arches, Chinese houes, temples, obelisks,
obelisks, calcades, fountains without end; and in a building, pillars, vases, statues, and a profusion of carved wood. Thus some women devoid of taste, are apt to overcharge every part of their dress with ornament. Superfluity of decoration hath another bad effect, by giving the object a diminutive look: an island in a wide extended lake makes it appear larger; but an artificial lake, which is always little, appears still less by making an island in it.

In forming plans for embellishing a field, an artist without taste deals in straight lines, circles, squares; because these show best upon paper. He perceives not, that to humour and adorn nature is the perfection of his art; and that nature, neglecting regularity, reacheth superior beauties by distributing her objects in great variety with a bold hand. A large field laid out with strict regularity, is stiff and artificial. Nature indeed, in organized bodies comprehended under one view, studies regularity; which, for the same reason, ought to be studied in architecture: but in large objects, which cannot otherwise be surveyed but in parts and by succession, regularity and uniformity would be useless properties, because they cannot be discovered by the eye. Nature therefore, in her large works, neglects these properties; and in copying nature, the artist ought to neglect them.

Having thus far carried on a comparison between gardening and architecture; rules peculiar to each come next in order, beginning with gardening. The simplest idea of a garden, is that of a spot embellished with a number of natural objects, trees, walks, polish'd parterres, flowers, streams, &c. One more complex comprehends statues and buildings, that nature and art may be mutually ornamental. A third, approaching nearer perfection, is of objects assembled together in order to produce, not only an emotion of beauty, essental to every

* See appendix to part 5: chap. 2:

† A square field appears not such to the eye when viewed from any part of it; and the centre is the only place where a circular field preserves in appearance its regular figure.
every garden, but also some other particular emotion, grandeur, for example, gaiety, or any other of those above mentioned. The most perfect idea of a garden is an improvement upon the third, requiring the several parts to be so arranged, as to inspire all the different emotions that can be raised by gardening. In this idea of a garden, the arrangement is an important circumstance; for it has been shown, that some emotions figure best in conjunction, and that others ought always to appear in succession, and never in conjunction. It is mentioned above*, that when the most opposite emotions, such as gloominess and gaiety, stillness and activity, follow each other in succession, the pleasure on the whole will be the greatest; but that such emotions ought not to be united, because they produce an unpleasant mixture †. For that reason, a ruin, affording a sort of melancholy pleasure, ought not to be seen from a flower parterre, which is gay and cheerful. But to pass from an exhilarating object to a ruin, has a fine effect; for each of the emotions is the more sensibly felt by being contrasted with the other. Similar emotions, on the other hand, such as gaiety and sweetness, stillness and gloominess, motion and grandeur, ought to be raised together; for their effects upon the mind are greatly heightened by their conjunction ‡.

Kent’s method of embellishing a field, is admirable; which is, to replenish it with beautiful objects, natural and artificial, disposed as upon a canvas by help of colours. It requires indeed more genius to paint in the gardening way: in forming a landscape upon a canvas, no more is required but to adjust the figures to each other: an artist who would form a garden in Kent’s manner, has an additional task; which is, to adjust his figures to the several varieties of the field.

A single garden must be distinguished from a plurality; and yet it is not obvious wherein the unity of a garden consists. We have indeed some notion of unity in a garden surrounding a palace, with views from each window, and walks leading to every corner: but there may.

* Chap. 8. † Chap. 2. part 4.
‡ See. the place immediately above cited.
may be a garden without a house; in which case, it is the unity of design that makes it one garden; as where a spot of ground is so artfully dressed as to make the several portions appear to be parts of one whole. The gardens of Versailles, properly expressed in the plural number, being no fewer than sixteen, are indeed all of them connected with the palace, but have scarce any mutual connection: they appear not like parts of one whole, but rather like small gardens in contiguity. A greater distance between these gardens would produce a better effect: their junction breeds confusion of ideas, and upon the whole gives less pleasure than would be felt in a flower succession.

Regularity is required in that part of a garden which joins the dwelling-house; for being considered as a more immediate accedfory, it ought to partake the regularity of the principal object*: but in proportion to the distance from the house considered as the centre, regularity ought less and less to be studied; for in an extensive plan, it hath a fine effect to lead the mind insensibly from regularity.

*The influence of that connection surpasing all bounds, is visible in many gardens, remaining to this day, formed of horizontal plains forc'd with great labour and expense, perpendicular faces of earth supported by masly stone walls, terrace-walks in stages one above another, regular ponds and canals without the least motion, and the whole surrounded, like a prison, with high walls excluding every external object: At first view it may puzzle one to account for a taste so opposite to nature in every particular. But nothing happens without a cause. Perfect regularity and uniformity are required in a house; and that idea is extended to its accedfory the garden, especially if it be a small spot incapable of grandeur or much variety: the house is regular, so must the garden be; the floors of the house are horizontal, and the garden must have the same position: in the house we are protected from every intruding eye; so must we be in the garden. This, it must be confessed, is carrying the notion of resemblance very far: but where reason and taste are laid asleep, nothing is more common than to carry resemblance beyond proper bounds.
regularity to a bold variety. Such arrangement tends to make an impression of grandeur: and grandeur ought to be studied as much as possible, even in a more confined plan, by avoiding a multiplicity of small parts *. A small garden, on the other hand, which admits not grandeur, ought to be strictly regular.

Milton, describing the garden of Eden, prefers justly grandeur before regularity:

> Flowers worthy of paradise, which not nice art In beds and curious knots, but Nature boon Pour'd forth profuse on hill, and dale, and plain; Both where the morning fun first warmly smote The open field, and where the unpierc'd shade Imbrown'd the noontide bow'rs.

Paradise lost, b. 4.

A hill covered with trees, appears both more beautiful and more lofty than when naked. To distribute trees in a plain requires more art: near the dwelling-house they ought to be scattered so distant from each other, as not to break the unity of the field; and even at the greatest distance of distinct vision, they ought never to be so crowded as to hide any beautiful object.

In the manner of planting a wood or thicket, much art may be display'd. A common centre of walks, termed a star, from whence are seen a number of remarkable objects, appears too artificial, and consequently too stiff and formal, to be agreeable: the crowding withal so many objects together, lessens the pleasure that would be felt in a slower succession. Abandoning therefore the star, let us try to substitute some form more natural, that will display all the remarkable objects in the neighbourhood. This may be done by various apertures in the wood; purposely contrived to lay open successively every such object; sometimes a single object, sometimes a plurality in a line, and sometimes a rapid succession of them: the mind at intervals is roused and cheered by agreeable objects; and the scene is greatly heightened by the surprie occasioned by flumbling, as it were, upon objects of which we had no expectation.

Attending

* See chap. 4.
Attending to the influence of contrast, explained in the eighth chapter, we discover why the lowness of the ceiling increases in appearance the size of a large room, and why a long room appears still longer by being very narrow, as is remarkable in a gallery: by the same means, an object terminating a narrow opening in a wood, appears at a double distance. This suggests another rule for distributing trees in some quarter near the dwelling-house; which is, to place a number of thickets in a line, with an opening in each directing the eye from one to another; which will make them appear more distant from each other than they are in reality, and in appearance enlarge the size of the whole field. To give this plan its utmost effect, the space between the thickets ought to be considerable: and in order that each may be seen distinctly, the opening nearest the eye ought to be wider than the second, the second wider than the third, and so on to the end.

By a judicious distribution of trees, various beauties may be produced, far exceeding what have been mentioned; which will appear as follows. A landscape so rich as to ingross the whole attention, and so limited as sweetly to be comprehended under a single view, has a much finer effect than the most extensive landscape that requires a wandering of the eye through successive scenes. This consideration suggests a capital rule in laying out a field; which is, never at any one station to admit a larger prospect than can easily be taken in at once. A field so happily situated as to command a great extent of prospect, is a delightful subject for applying this rule: let the prospect be split into proper parts by means of trees; studying at the same time to introduce all the variety possible. A plan of this kind executed with taste will

* An object will appear more distant than it really is, if we separate it from the eye by lines of different coloured evergreens. Suppose the lines to be of holly and laurel, and the holly, which is of the deepest colour, next the eye: the degradation of colour in the laurel, makes it appear at a great distance from the holly, and consequently removes the object, in appearance, to a greater distance than it really is.
will produce charming effects: the beautiful prospects are multiplied: each of them is much more agreeable than the entire prospect was originally: and, to crown the whole, the scenery is greatly diversified.

As gardening is not an inventive art, but an imitation of nature, or rather nature itself ornamented; it follows necessarily, that every thing unnatural ought to be rejected with disdain. Statues of wild beasts vomiting water, a common ornament in gardens, prevails in those of Versailles. Is that ornament in a good taste? A jet d'eau, being purely artificial, may, without disgust, be tortured into a thousand shapes: but a representation of what really exists in nature, admits not any unnatural circumstance. These statues therefore of Versailles must be condemned; and so insensible has the aërt been to just imiation, as to have display'd his vicious taste without the least colour or disguise: a lifeless statue of an animal pouring out water, may be endured without much disgust; but here the lions and wolves are put in violent action, each has seized its prey, a deer or a lamb, in act to devour; and yet we know not by what hocus-pocus trick, the whole is converted into a different scene; the lion, forgetting his prey, pours out water plentifully; and the deer, forgetting its danger, performs the same work; a representation not less absurd than that in the opera, where Alexander the Great, after mounting the wall of a town besieged, turns his back to the enemy, and entertains his army with a song.*

In gardening, every lively exhibition of what is beautiful in nature has a fine effect: on the other hand, distant and faint imitations are displeasing to every one of taste. The cutting evergreens in the shape of animals, is

* Ulloa, a Spanish writer, describing the city of Lima, says, that the great square is finely ornamented. "In the centre is a fountain, equally remarkable for its grandeur and capacity. Railed above the fountain is a bronze statue of Fame, and four small basons on the angles. The water issues from the trumpet of the statue, and from the mouths of eight lions sur-rounding it, which (in his opinion) greatly heighten the beauty of the whole."
is very antient; as appears from the epistles of Pliny, who seems to be a great admirer of the conceit. The propensity to imitation gave birth to that practice; and has supported it wonderfully long, considering how faint and insipid the imitation is. But the vulgar, great and small, devoid of taste, are entertained with the oddness and singularity of a resemblance, however distant, between a tree and an animal. An attempt in the gardens of Versailles to imitate a grove of trees by a group of jets d'eau, appears, for the same reason, not less childish.

In designing a garden, every thing trivial or whimsical ought to be avoided. Is a labyrinth then to be justified? It is a mere conceit, like that of composing verses in the shape of an axe or an egg: the walks and hedges may be agreeable; but in the form of a labyrinth, they serve to no end but to puzzle: a riddle is a conceit not so mean; because the solution is proof of sagacity, which affords no aid in tracing a labyrinth.

The gardens of Versailles, executed with infinite expense by the best artists that could be found, are a lasting monument of a taste the most depraved: the faults above mentioned, instead of being avoided, are chosen as beauties, and multiplied without end. Nature, it would seem, was deemed too vulgar to be imitated in the works of a magnificent monarch; and for that reason preference was given to things unnatural, which probably were mistaken for supernatural. I have often amused myself with a fancifil resemblance between these gardens and the Arabian tales; each of them is a performance intended for the amusement of a great king: in the sixteen gardens of Versailles there is no unity of design, more than in the thousand and one Arabian tales: and, lastly, they are equally unnatural; groves of jets d'eau. statues of animals conversing in the manner of Æsop, water issuing out of the mouths of wild beasts, give an impression of fairy-land and witchcraft, not less than diamond-palaces, invisible rings, spells and incantations.

A straight road is the most agreeable, because it shortens the journey. But in an embellished field, a straight walk has an air of formality and confinement; and at any rate is less agreeable than a winding or waving walk; for
for in surveying the beauties of an ornamented field, we love to roam from place to place at freedom. Winding walks have another advantage: at every step they open new views. In short, the walks in pleasure ground ought not to have any appearance of a road: my intention is not to make a journey, but to feast my eye upon the beauties of art and nature. This rule excludes not openings directing the eye to distant objects. Such openings, beside variety, are agreeable in various respects: first, as observed above, they extend in appearance the size of the field: next, an object, at whatever distance, continues the opening, and deludes the spectator into a conviction, that the trees which confine the view are continued till they join the object. Straight walks also in recesses do extremely well: they vary the scenery, and are favourable to meditation.

Avoid a straight avenue directed upon a dwelling-house: better far an oblique approach in a waving line, with single trees and other scattered objects interposed. In a direct approach, the first appearance continues the same to the end: we see a house at a distance, and we see it all along in the same spot without any variety. In an oblique approach, the interposed objects put the house seemingly in motion: it moves with the passenger, and appears to direct its course so as hospitably to intercept him. An oblique approach contributes also to variety: the house, being seen successively in different directions, takes on at each step a new figure.

A garden on a flat ought to be highly and variously ornamented, in order to occupy the mind, and prevent our regretting the insipidity of an uniform plain. Artificial mounts in that view are common: but no person has thought of an artificial walk elevated high above the plain. Such a walk is airy, and tends to elevate the mind: it extends and varies the prospect: and it makes the plain, seen from a height, appear more agreeable.

Whether should a ruin be in the Gothic or Grecian form? In the former, I think; because it exhibits the triumph of time over strength; a melancholy, but not unpleasant thought: a Grecian ruin suggests rather the triumph of barbarity over taste; a gloomy and discouraging thought.
There are not many fountains in a good taste. Statues of animals vomiting water, which prevail everywhere, stand condemned as unnatural. A statue of a whale spouting water upward from its head, is in one sense natural, as whales of a certain species have that power; but it is a sufficient objection, that its singularity would make it appear unnatural: there is another reason against it, that the figure of a whale is in itself not agreeable. In many Roman fountains, statues of fishes are employ'd to support a large basin of water. This unnatural conceit is not accountable, unless from the connexion that water hath with the fish that swim in it; which by the way shows the influence of even the slighter relations. The best design for a fountain I have met with, is what follows. In an artificial rock, rugged and abrupt, there is a cavity out of sight at the top; the water, convey'd to it by a pipe, pours or trickles down the broken parts of the rock, and is collected into a basin at the foot: it is so contrived, as to make the water fall in sheets or in rills at pleasure.

Hitherto a garden has been treated as a work intended solely for pleasure, or, in other words, for giving impressions of intrinsic beauty. What comes next in order is the beauty of a garden destined for use, termed relative beauty *; and this branch shall be dispatched in a few words. In gardening, luckily, relative beauty need never stand in opposition to intrinsic beauty: all the ground that can be requisite for use, makes but a small proportion of an ornamented field; and may be put in any corner without obstructing the disposition of the capital parts. At the same time, a kitchen-garden or an orchard is susceptible of intrinsic beauty; and may be so artfully disposed among the other parts, as by variety and contrast to contribute to the beauty of the whole. In this respect, architecture is far more intricate, as will be seen immediately; for as intrinsic and relative beauty must often be blended in the same building, it becomes a difficult task to attain both in any perfection.

In a hot country, it is a capital object to have what may be term'd a summer-garden, that is, a space of

* See these terms defined, chap. 3.
ground disposed by art and by nature to exclude the sun, but to give free access to the air. In a cold country, the capital object should be a *winter garden*, open to the sun, sheltered from wind, dry under foot, and having the appearance of summer by variety of evergreens. The relish of a country life is totally extinguished in France, and is decaying fast in Britain. But as still many people of fashion, and some of taste, pass the winter, or part of it, in the country, it is amazing that winter-gardens should be almost totally overlooked. During summer every field is a garden; but for six months of the year the weather is seldom so good in Britain as to afford comfort in the open air without shelter, and yet seldom so bad as not to afford comfort with shelter. I say more; that beside providing for exercise and health, a winter-garden may be made subservient to education, by introducing a habit of thinking. In youth, lively spirits give too great a propensity to pleasure and amusement, making us averse to serious occupation. That untoward bias may be corrected in some degree by a winter garden, which produces in the mind a calm satisfaction, free from agitation of passion, whether gay or gloomy; a fine tone of mind for meditation and reasoning.

**Gardening**

* A correspondent, whose name I conceal that I may not be thought vain, writes to me as follows. "In life we generally lay our account with prosperity, and seldom, very seldom, prepare for adversity. We carry that propensity even into the structure of our gardens: we cultivate the gay ornaments of summer, relishing no plants but what flourish by mild dews and gracious sunshine; we banish from our thoughts ghastly winter, when the benign influences of the sun chearing us no more, are doubly regretted by yielding to the piercing northwind and nipping frost. Sage is the gardener, in the metaphorical as well as literal sense, who procures a friendly shelter to protect us from December storms, and cultivates the plants that adorn and enliven that dreary season. He is no philosopher who cannot retire into the Stoic's walk, when the gardens..."
Gardening being in China brought to greater perfection than in any other known country, we shall close our present subject with a slight view of Chinese gardens, which are found entirely obsequious to the principles that govern every one of the fine arts. In general, it is an indispensable law there, never to deviate from nature: but in order to produce that degree of variety which is pleasing, every method consistent with nature is put in practice. Nature is strictly imitated in the banks of their artificial lakes and rivers; which sometimes are bare and gravelly, sometimes covered with wood quite to the brink of the water. To flat spots adorned with flowers and shrubs, are opposed others steep and rocky. We see meadows covered with cattle; rice-grounds that run into lakes; groves into which enter navigable creeks and rivulets: these generally conduct to some interesting object, a magnificent building, terraces cut in a mountain, a cascade, a grotto, an artificial rock, or such like. Their artificial rivers are generally serpentine; sometimes narrow, noisy, and rapid; sometimes deep, broad, and flow: and to make the scene still more active, mills and other moving machines are often erected. In the lakes are interspersed islands; some barren, surrounded with rocks and shoals; others enriched with every thing that art and nature can furnish. Even in their cascades they avoid regularity, as forcing nature out of its course: the waters are seen burfting from the caverns and windings of the artificial rocks, here an impetuous cataract, there many lesser falls; and the stream often impeded by trees and stones, that seem brought down by the violence of the current. Straight lines are sometimes indulged, in order to take the advantage of some interesting object at a distance, by directing openings upon it.

Sensible of the influence of contrast, the Chinese artists deal in sudden transitions, and in opposing to each other, forms, colours, and shades. The eye is conducted,

"gardens of Epicurus are out of bloom: he is too much a philosopher who will rigidly proscribe the flowers and aromatics of summer, to sit constantly under the cypresses shade."
ed, from limited to extensive views, and from lakes and rivers to plains, hills, and woods: to dark and gloomy colours, are opposed the more brilliant: the different masses of light and shade are disposed in such a manner, as to render the composition distinct in its parts, and striking on the whole. In plantations, the trees are artfully mixed according to their shape and colour; those of spreading branches with the pyramidal, and the light green with the deep green. They even introduce decay'd trees, some erect, and some half out of the ground*. In order to heighten contrast, much bolder strokes are risked: they sometimes introduce rough rocks, dark caverns, trees ill formed, and seemingly rent by tempests, or blasted by lightening; a building in ruins, or half consumed by fire. But to relieve the mind from the harshness of such objects, the sweetest and most beautiful scenes are always made to succeed.

The Chinese study to give play to the imagination: they hide the termination of their lakes; and commonly interrupt the view of a cascade by trees, through which are seen obscurely the waters as they fall. The imagination once roused, is disposed to magnify every object.

Nothing is more studied in Chinese gardens than to raise wonder or surprise. In scenes calculated for that end, every thing appears like fairy-land; a torrent, for example, convey'd under ground, puzzling a stranger by its uncommon sound to guess what it may be; and, to multiply such uncommon sounds, the rocks and buildings are contrived with cavities and interlices. Sometimes one is led insensibly into a dark cavern, terminating unexpectedly in a landscape enriched with all that nature affords the most delicious. At other times, beautiful walks insensibly conduct us to a rough uncultivated field, where bushes, briers and stones interrupt the passage; looking about for an outlet, some rich prospect

*Tatte has suggested to Kent the same artifice. The placing a decay'd tree properly, contributes to contrast; and also in a pensive or sedate state of mind produces a sort of pity, grounded on an imaginary personification.
pect unexpectedly open to view. Another artifice is, to obscure some capital part by trees or other interposed objects; our curiosity is raised to know what lies beyond; and after a few steps, we are greatly surprized with some scene totally different from what was expected.

These cursory observations upon gardening, shall be closed with some reflections that must touch every reader. Rough uncultivated ground, dismal to the eye, inspires peevishness and discontent: may not this be one cause of the harsh manners of savages? A field richly ornamented, containing beautiful objects of various kinds, displays in full lustre the goodness of the Deity, and the ample provision he has made for our happiness; which must fill every spectator with gratitude to his Maker, and with benevolence to his fellow-creatures. Other fine arts may be perverted to excite irregular, and even vicious, emotions: but gardening, which inspires the purest and most refined pleasures, cannot fail to promote every good affection. The gaiety and harmony of mind it produceth, inclining the spectator to communicate his satisfaction to others, and to make them happy as he is himself, tend naturally to establish in him a habit of humanity and benevolence *.

It is not easy to suppress a certain degree of enthusiasm when we reflect upon the advantages of gardening with respect to virtuous education. In early youth the deepest impressions are made; and it is a sad truth, that the young student familiarized to the dirtiness and disorder of many colleges pent within narrow bounds in populous cities, is rendered in a measure insensible to the elegant beauties of art and nature. Would not every great man who loves his country, and wishes his countrymen to make a figure, be zealous to reform this evil?

* The manufactures of silk, flax, and cotton, in their present advance toward perfection, may be held as inferior branches of the fine arts; because their productions in dress and in furniture are beautiful like those of the fine arts, and inspire gay and kindly emotions favorable to morality, similar to what are inspired by a garden or other production of the fine arts.
evil? It seems to me far from an exaggeration, that good professors are not more essential to a college, than a spacious garden sweetly ornamented, but without any thing glaring or bizarre, so as upon the whole to inspire our youth with a taste not less for simplicity than for elegance. In that respect, the university of Oxford may justly be deemed a model.

Having finished what occurred on gardening, I proceed to rules and observations that more peculiarly concern architecture. Architecture, being an useful as well as a fine art, leads us to distinguish buildings and parts of buildings into three kinds; viz. what are intended for utility solely, what for ornament solely, and what for both. Buildings intended for utility solely, such as detached offices, ought in every part to correspond precisely to that intention; the slightest deviation from the end in view, will by every person of taste be thought a defect or blemish. In general, it is the perfection of every work of art, that it fulfills the purpose for which it is intended; and every other beauty, in opposition, is neglected as improper. In things again intended for ornament, such as pillars, obelisks, triumphal arches, beauty solely ought to be regarded; a Heathen temple must be considered as merely ornamental; for being dedicated to some deity, and not intended for habitation, it is susceptible of any figure and any embellishment that fancy can suggest and beauty require. The great difficulty of contrivance, respects buildings that are intended to be useful as well as ornamental. These ends, employing different and often opposite means, are seldom united in perfection; and the only practicable method in such buildings is, to favour or neglect ornament according to the character of the building: in palaces, and other edifices sufficiently extensive to admit a variety of useful contrivance, regularity justly takes the lead; but in dwelling-houses that are too small for variety of contrivance, utility ought to prevail, neglecting regularity so far as it stands in opposition to convenience.°

* A building must be large to produce any sensible emotion of regularity, proportion, or beauty; which is an additional reason for minding convenience only in a dwelling-house of small size.
Intrinsic and relative beauty being founded on different principles, must be handled separately; and I begin with relative beauty, as of the greater importance.

The proportions of a door, are determined by the use to which it is destin'd. The door of a dwelling-house, which ought to correspond to the human size, is confined to seven or eight feet in height, and three or four in breadth. The proportions proper for the door of a barn or coach-house, are widely different. Another consideration enters: to study intrinsic beauty in a coach-house or barn, intended merely for use, is obviously improper. But a dwelling-house may admit ornaments; and the principal doors of a palace demands all the grandeur that is consistent with the foregoing proportions dictated by utility: it ought to be elevated, and approached by steps; and it may be adorned with pillars supporting an architrave, or in any other beautiful manner. The door of a church ought to be wide, in order to afford an easy passage for a multitude: the width, at the same time, regulates the height, as will appear by and by. The size of windows ought to be proportioned to that of the room they illuminate; for if the apertures be not sufficiently large to convey light to every corner, the room is unequally lighted, which is a great deformity. Steps of stairs ought to be accommodated to the human figure, without regarding any other proportion: these steps accordingly are the same in large and in small buildings, because both are inhabited by men of the same size.

I proceed to consider intrinsic beauty blended with that which is relative. Though a cube in itself be more agreeable than a parallelopipedon, yet a large building in the form of a cube, appears lumpish and heavy; whereas the other figure, let on its smaller base, is by its elevation more agreeable, and hence the beauty of a Gothic tower. But supposing that a parallelopipedon is destin'd for a dwelling-house, to make way for relative beauty, we immediately perceive that utility ought chiefly to be regarded, and that this figure, inconvenient by its height, ought to be set upon its larger height; the loftiness is gone; but that loss is more than compensated by additional convenience; and for that reason the form
form of a building spread more upon the ground than raised in height, is always preferred for a dwelling-house, without excepting even the most superb palace.

With respect to the divisions within, utility requires that the rooms be rectangular; for otherwise void spaces will be left, which are of no use. A hexagonal figure leaves no void spaces; but it determines the rooms to be all of one size, which is extremely inconvenient. A room of a moderate size may be a square; but in very large rooms that figure must, for the most part, give place to a parallelogram, which can more easily be adjusted than a square, to the smaller rooms contrived merely for convenience. A parallelogram, at the same time, is the best calculated for receiving light; because, to avoid cross lights, all the windows ought to be in one wall; and if the opposite wall be at such distance as not to be fully lighted, the room must be obscure. The height of a room exceeding nine or ten feet, has little or no relation to utility; and therefore proportion is the only rule for determining the height when above that number of feet.

As all artists who deal in the beautiful are naturally prone to entertain the eye, they have opportunity to exert their taste upon palaces and sumptuous buildings, where, as above observed, intrinsic beauty ought to have the ascendant over that which is relative. But such propensity is unhappy with respect to dwelling-houses of moderate size; because in these, intrinsic beauty cannot be display'd in any perfection, without wounding relative beauty: a small house admits not great variety of form; and in such houses there is no instance of internal convenience being accurately adjusted to external regularity: I am apt to believe that it is beyond the reach of art. And yet architects always split upon that rock; for they never will give over attempting to reconcile these two incompatibles: how otherwise should it happen, that of the endless variety of private dwelling-houses, there is not one to be found generally agreed upon as a good pattern? The unwearied propensity to make a house regular as well as convenient, forces the architect, in some articles, to sacrifice convenience to regularity, and in others, regularity to convenience;
and accordingly the house, which turns out neither regular nor convenient, never fails to displease: the faults are obvious, and the difficulty of doing better is known to the artist only.*

Nothing can be more evident, than that the form of a dwelling-house ought to be suited to the climate; and yet no error is more common, than to copy in Britain the form of Italian houses; not forgetting even those parts that are purposely contrived for air, and for excluding the sun. I shall give one or two instances. A colonnade along the front of a building, hath a fine effect in Greece and Italy, by producing coolness and obscurity, agreeable properties in warm and luminous climates: but the cold climate of Britain is altogether adverse to that ornament; and therefore, a colonnade can never be proper in this country, unless for a portico, or to communicate with a detached building. Again, a loggia laying the house open to the north, contrived in Italy for gathering cool air, is, if possible, still more improper for this climate: scarce endurable in summer, it, in winter, exposes the house to the bitter blasts of the north, and to every shower of snow and rain.

Having said what appeared necessary upon relative beauty, the next step is, to view architecture as one of the fine arts; which will lead us to the examination of such buildings, and parts of buildings, as are calculated solely to please the eye. In the works of Nature, rich and magnificent, variety prevails; and in works of Art that are contrived to imitate Nature, the great art is to hide every appearance of art; which is done by avoiding regularity, and indulging variety. But in works of art that are original, and not imitative, the timid hand is guided by rule and compass; and accordingly in architecture strict regularity and uniformity is studied, as far as consistent with utility.

Proportion is not less agreeable than regularity and uniformity; and therefore in buildings intended to please the eye, they are all equally essential. By many writers it

* "Houses are built to live in, and not to look on; therefore let use be preferred before uniformity, except where both may be had." Lo. Verulam, essay 45.
it is taken for granted, that in all the parts of a building there are certain strict proportions that please the eye; precisely as in sound there are certain strict proportions that please the ear; and that in both the slightest deviation is equally disagreeable. Others again seem to relish more a comparison between proportion in numbers and proportion in quantity; and hold that the same proportions are agreeable in both. The proportions, for example, of the numbers 16, 24, and 36, are agreeable; and so, say they, are the proportions of a room, the height of which is 16 feet, the breadth 24, and the length 36. May I rely upon the reader, that he will patiently go along with me in examining this point, which is useful as well as curious? Taking it for granted, I proceed. To refute the notion of a resemblance between musical proportions and those of architecture, it might be sufficient to observe in general, that the one is addressed to the ear, the other to the eye; and that objects of different senses have no resemblance, nor indeed any relation to each other. But more particularly, what pleases the ear in harmony, is not the proportion of the strings of the instrument, but of the sounds that these strings produce: in architecture, on the contrary, it is the proportion of different quantities that pleases the eye, without the least relation to sound. Besides, were quantity here to be the sole ground of comparison, we have no reason to presume, that there is any natural analogy between the proportions that please in a building, and the proportions of strings that produce concordant sounds. Let us take for example an octave, produced by two similar strings, the one double of the other in length: this is the most perfect of all concords; and yet I know not that the proportion of one to two is agreeable in any two parts of a building. I add, that concordant notes are produced by wind-instruments, which, as to proportion, appear not to have even the slightest resemblance to a building.

With respect to the other notion, instituting a comparison between proportion in numbers and proportion in quantity; I urge, that number and quantity are so distinct from each other, as to afford no probability of any natural relation between them. Quantity is a real quality
quality of every body; number is not a real quality, but merely an idea that arises upon viewing a plurality of things, whether conjunctly or in succession. An arithmetical proportion is agreeable in numbers; but have we any reason to infer that it must also be agreeable in quantity? At that rate, a geometrical proportion, and many others which are agreeable in numbers, ought also to be agreeable in quantity. A certain proportion may coincide in both; and among an endless variety of proportions, it would be wonderful, if there never should be a coincidence: one example is given of coincidence in the numbers 16, 24, and 36; but to be convinced that it is merely accidental, we need but reflect, that the same proportions are not applicable to the external figure of a house, and far less to a column.

That we are framed by nature to relish proportion as well as regularity, is indisputable; but that agreeable proportion, like concord in sounds, should be confined to certain precise measures, is not warranted by experience; on the contrary, we learn from experience, that proportion admits more and less, that several proportions are each of them agreeable, and that we are not sensible of disproportion till the difference between the quantities compared become the most striking circumstance. Columns evidently admit different proportions, equally agreeable; and so do houses, rooms, and other parts of a building. This leads to an interesting reflection: the foregoing difference between concord and proportion, is an additional instance of that admirable harmony which subsists among the several branches of the human frame: the ear is an accurate judge of sounds, and of their smallest differences; and that concord in sounds should be regulated by accurate measures, is perfectly well suited to this accuracy of perception: the eye is more uncertain about the size of a large object, than of one that is small; and at a distance an object appears less than at hand. Delicacy of feeling, therefore, with respect to proportion in quantities, would be an useless quality; and it is much better ordered, that there should be such a latitude with respect to agreeable proportions, as to correspond to the uncertainty of the eye with respect to quantity.

But
But all the beauties of this scene are not yet display'd; and it is too interesting to be passed over in a cursory view. I proceed to observe, that to make the eye as delicate with respect to proportion as the ear is with respect to concord, would not only be an useless quality, but be the source of continual pain and uneasiness. I need go no farther for a proof than the very room I occupy at present; for every step I take varies to me, in appearance, the proportion of the length and breadth: at that rate, I should not be happy but in one precise spot, where the proportion appears agreeable. Let me further observe, that it would be singular indeed, to find in the nature of man, any two principles in perpetual opposition to each other: which would precisely be the case, if proportion were inscribed like concord; for it would exclude all but one of those proportions that utility requires in different buildings, and in different parts of the same building.

It is ludicrous to observe writers acknowledging the necessity of accurate proportions, and yet differing widely about them. Laying aside reasoning and philosophy, one fact universally agreed on ought to have undeceived them, that the same proportions which are agreeable in a model are not agreeable in a large building: a room 48 feet in length and 24 in breadth and height, is well proportioned; but a room 12 feet wide and high and 24 long, approaches to a gallery.

Perrault, in his comparison of the antients and moderns*, is the only author who runs to the opposite extreme; maintaining, that the different proportions assigned to each order of columns are arbitrary, and that the beauty of these proportions is entirely the effect of custom. This bewrays ignorance of human nature, which evidently delights in proportion, as well as in regularity, order, and propriety. But without any acquaintance with human nature, a single reflection might have convinced him of his error, That if these proportions had not originally been agreeable, they could not have been established by custom.

To illustrate the present point, I shall add a few examples.

* Page 94.
ample's of the agreeableness of different proportions. In a sumptuous edifice, the capital rooms ought to be large, for otherwise they will not be proportioned to the size of the building: and for the same reason, a very large room is improper in a small house. But in things thus related, the mind requires not a precise or single proportion, rejecting all others; on the contrary, many different proportions are made equally welcome. It is only when a proportion becomes loose and distant, that the agreeableness abates, and at last vanishes. In all buildings accordingly, we find rooms of different proportions equally agreeable, even where the proportion is not influenced by utility. With respect to the height of a room, the proportion it ought to bear to the length and breadth, is extremely arbitrary; and it cannot be otherwise, considering the uncertainty of the eye as to the height of a room, when it exceeds 17 or 18 feet. In columns again, even architects must confess, that the proportion of height and thickness varies between 8 diameters and 10, and that every proportion between these two extremes is agreeable. But this is not all. There must certainly be a further variation of proportion, depending on the size of the column: a row of columns 10 feet high, and a row twice that height, require different proportions: the intercolumniations must also differ in proportion according to the height of the row.

Proportion of parts is not only itself a beauty, but is inseparably connected with a beauty of the highest reliñ, that of concord or harmony; which will be plain from what follows. A room of which the parts are all finely adjusted to each other, strikes us with the beauty of proportion. It strikes us at the same time with a pleasure far superior: the length, the breadth, the height, the windows, raise each of them separately an emotion: these emotions are similar; and though faint when felt separately, they produce in conjunction the emotion of concord or harmony, which is extremely pleasant*. On the other hand, where the length of a room far exceeds the breadth, the mind comparing together parts so intimately

* Chap. 2. part 4.
nately connected, immediately perceives a disagreement or disproportion which disgusts. But this is not all: viewing them separately, different emotions are produced, that of grandeur from the great length, and that of meanness or littleness from the small breadth, which in union are disagreeable by their discordance. Hence it is, that a long gallery, however convenient for exercise, is not an agreeable figure of a room: we consider it, like a stable, as destined for use, and expect not that in any other respect it should be agreeable.*

Regularity and proportion are essential in buildings destined chiefly or solely to please the eye, because they are the means to produce intrinsic beauty. But a skilful artist will not confine his view to regularity and proportion: he will also study congruity, which is perceived when the form and ornaments of a structure are suited to the purpose for which it is intended. The sense of congruity dictates the following rule. That every building have an expression corresponding to its destination: A palace ought to be sumptuous and grand; a private dwelling, neat and modest; a play-house, gay and splendid; and a monument, gloomy and melancholy †. A Heathen temple has a double destination: it is considered chiefly as a house dedicated to some divinity; and in

* A covered passage connecting a winter-garden with the dwelling-house, would answer the purpose of walking in bad weather much better than a gallery. A slight roof supported by slender pillars, whether of wood or stone, would be sufficient; filling up the spaces between the pillars with evergreens, so as to give verdure and exclude wind.

† A house for the poor ought to have an appearance suited to its destination. The new hospital in Paris for foundlings, errs against this rule; for it has more the air of a palace than of a hospital. Propriety and convenience ought to be studied in lodging the indigent; but in such houses splendor and magnificence are out of all rule. For the same reason, a naked statue or picture, scarce decent anywhere, is in a church intolerable. A sumptuous charity-school, beside its impropriety, gives the children an unhappy taste for high living.
that respect it ought to be grand, elevated, and magnificent: it is considered also as a place of worship; and in that respect it ought to be somewhat dark or gloomy, because dimness produces that tone of mind which is suited to humility and devotion. A Christian church is not considered to be a house for the Deity, but merely a place of worship: it ought therefore to be decent and plain, without much ornament: a situation ought to be chosen, humble and retired; because the congregation, during worship, ought to be humble, and disengaged from the world. Columns, beside their chief service of being supports, contribute to that peculiar expression which the destination of a building requires: columns of different proportions, serve to express loftinesfs, lightness, &c. as well as strength. Situation also may contribute to expression: convenience regulates the situation of a private dwelling-house; but, as I have had occasion to observe *; the situation of a palace ought to be lofty.

And this leads to a question, Whether the situation, where there happens to be no choice, ought, in any measure, to regulate the form of the edifice? The connection between a great house and the neighbouring fields, though not extremely intimate, demands however some congruity. It would, for example, displease us to find an elegant building thrown away upon a wild uncultivated country: congruity requires a polished field for such a building; and beside the pleasure of congruity, the spectator is sensible of the pleasure of concordance from the similarity of the emotions produced by the two objects. The old Gothic form of building seems well suited to the rough uncultivated regions where it was invented: the only mistake was, the transferring this form to the fine plains of France and Italy, better fitted for buildings in the Grecian taste; but by refining upon the Gothic form, every thing possible has been done to reconcile it to its new situation. The profuse variety of wild and grand objects about Inverary, demanded a house in the Gothic form; and every one must approve the taste of the proprietor, in adjusting so finely.

* Chap. 10.
The external structure of a great house leads naturally to its internal structure. A large and spacious room, which is the first that commonly receives us, seems a bad contrivance in several respects. In the first place, when immediately from the open air we step into such a room, its size in appearance is diminished by contrast; it looks little compared with that great canopy the sky. In the next place, when it recovers its grandeur, as it soon doth, it gives a diminutive appearance to the rest of the house: passing from it, every apartment looks little. This room therefore may be aptly compared to the swollen commencement of an epic poem.

Bella per Emathios plusquam civilia campos.

In the third place, by its situation it serves only for a waiting room, and a passage to the principal apartments; instead of being reserved, as it ought to be, for entertaining company; a great room, which enlarges the mind and gives a certain elevation to the spirits, is destined by nature for conversation. Rejecting therefore this form, I take a hint from the climax in writing for another form that appears more suitable: a handsome portico, proportioned to the size and fashion of the front, leads into a waiting-room of a larger size; and that to the great room, all by a progression from small to great. If the house be very large, there may be space for the following suit of rooms; first, a portico; second, a passage within the house, bounded by a double row of columns connected by arcades; third, an octagon room, or of any other figure, about the centre of the building; and, lastly, the great room.

A double row of windows must be disagreeable by distributing the light unequally: the space in particular between the rows is always gloomy. For that reason, a room of great height, which cannot be conveniently served by a single row, ought regularly to be lighted from the roof. Artists have generally an inclination to form the great room into a double cube, even with the inconvenience of a double row of windows: they are pleased with the regularity, overlooking that it is mental.
of all the emotions that can be raised by architecture, grandeur is that which has the greatest influence on the mind; and it ought therefore to be the chief study of the artist, to raise this emotion in great buildings destined to please the eye. But as grandeur depends partly on size, it seems so far unlucky for architecture, that it is governed by regularity and proportion, which never deceive the eye by making objects appear larger than they are in reality: such deception, as above observed in the present chapter, is never found but with some remarkable disproportion of parts. But though regularity and proportion contribute nothing to grandeur as far as that emotion depends on size, they in a different respect contribute greatly to it, as has been explained above.

Next of ornaments, which contribute to give buildings a peculiar expression. It has been doubted whether a building can regularly admit any ornament but what is useful, or at least has that appearance. But considering the different purposes of architecture, a fine as well as a useful art, there is no good reason why ornaments may not be added to please the eye without any relation to use. This liberty is allowed in poetry, painting, and gardening, and why not in architecture considered as a fine art? A private dwelling-house, it is true, and other edifices where use is the chief aim, admit not regularly any ornament but what has the appearance, at least, of use: but temples, triumphal arches, and other buildings intended chiefly or solely for show, admit every sort of ornament.

A thing

* One who has not given peculiar attention will scarce imagine how imperfect our judgment is about distances, without experience: Our looks being generally directed to objects upon the ground around us, we judge tolerably well of horizontal distances; but seldom having occasion to look upward in a perpendicular line, we scarce can form any judgment of distances in that direction.

† Vol. 1. p. 225.
A thing intended merely as an ornament without relation to use, may be of any figure and of any kind that fancy can suggest: if it please the spectator, the artist gains his end. Statues, vases, sculpture upon stone, whether basso or alto relievo, are beautiful ornaments relish’d in all civilized countries. The placing such ornaments so as to produce the best effect, is the only nicety. A statue done to perfection is an enchanting work; and we naturally require that it should be seen in every direction and at different distances; for which reason, statues employ’d as ornaments are proper to adorn the great stai that leads to the principal door of a palace, or to occupy the void between pillars. But a niche in the external front is not a proper place for a statue: and statues upon the roof, or upon the top of a wall, would give pain by seeming to be in danger of tumbling down. To adorn the top of a wall with a row of vases is an unhappy conceit, by placing things apparently of use where they cannot be of any use. As to basso and alto relievo, I observe, that in architecture as well as in gardening, contradictory expressions ought to be avoided: for which reason, the lightness and delicacy of carved work suits ill with the firmness and solidity of a pedestal: upon the pedestal, whether of a statue or a column, the antients never ventured any bolder ornament than the basso relievo.

One at first view will naturally take it for granted, that in the ornaments under consideration beauty is indispensable. It goes a great way undoubtedly; but upon trial we find many things esteemed as highly ornamental that have little or no beauty. There are various circumstances, beside beauty, that tend to make agreeable impressions. For instance, the reverence we have for the antients is a fruitful source of ornaments. A malthea’s horn has always been a favourite ornament, because of its connection with a lady who was honoured with the care of Jupiter in his infancy. A fat old fellow and a goat are surely not graceful forms, and yet Silenus and his companion are everywhere fashionable ornaments. What else but our fondness for antiquity can make the horrid form of a Sphinx so much as endurable. Original destination is another circumstance that
that has influence to add dignity to things in themselves abundantly trivial. In the sculpture of a marble chimney-piece, instruments of a Grecian or Roman sacrifice are beheld with pleasure; original destitution rendering them venerable as well as their antiquity. Let some modern cutlery ware be substituted, though not less beautiful, the artist will be thought whimsical, if not absurd. Triumphal arches, pyramids, obelisks, are beautiful forms; but the nobleness of their original destination has greatly enhanced the pleasure we take in them. A statue supposed to be an Apollo, will with an antiquary lose much of its grace when discovered to have been done for a barber's apprentice. Long robes appear noble, not singly for their flowing lines, but for their being the habit of magistrates; and a scarf acquires an air of dignity by being the badge of a superior order of churchmen. These examples may be thought sufficient for a specimen: a diligent inquiry into human nature will discover other influencing principles; and hence it is, that of all subjects ornaments occasion the greatest variety of taste.

Things merely ornamental appear more gay and showy than things that take on the appearance of use. A knot of diamonds in the hair is splendid; but diamonds have a more modest appearance when used as clasps or buttons. The former are more proper for a young beauty, the latter after marriage.

And this leads to ornaments having relation to use. Ornaments of that kind are governed by a different principle, which is, That they ought to be of a form suited to their real or apparent destination. This rule is applicable as well to ornaments that make a component part of the subject, as to ornaments that are only accessory. With relation to the former, it never can proceed from a good taste to make a tea-spoon resemble the leaf of a tree; for such a form is inconsistent with the destination of a tea-spoon. An eagle's paw is an ornament not less improper for the foot of a chair or table; because it gives it the appearance of weakness, inconsistent with its destination of bearing weight. Blind windows are sometimes introduced to preserve the appearance of regularity: in which case the deceit ought carefully
Ch. XXIV. Architecture. 305

carefully to be concealed; for to make it visible would be to mark the irregularity in the clearest manner, by signifying that real windows ought to have been there could they have been made consistent with the internal structure. A pilaster is another example of the same sort of ornament; and the greatest error against its seeming destination of a support, is to sink it so far into the wall as to make it lose that seeming. A composition representing leaves and branches, with birds perching upon them, has been long in fashion for a candlestick: but none of these particulars is in any degree suited to the destination of a candlestick.

A large marble basin supported by fishes is a conceit much relished in fountains. This is an example of accedent ornaments which are in a bad taste; for fishes here are absolutely unsuitable to their apparent destination. Not less so are the supports of a coach when they are carved in the figure of Dolphins or Tritons: for what have these marine beings to do on dry land? and what support can they be to a coach?

In a column we have an example of both kinds of ornament. Where columns are employ'd in the front of a building to support an entablature, they belong to the first kind: where employ'd to connect with detach'd offices, they are rather of the other kind. As a column is a capital ornament in Grecian architecture, it well deserves to be handled at large.

With respect to the form of this ornament, I observe, that a circle is a more agreeable figure than a square, a globe than a cube, and a cylinder than a parallelopipedon. This last, in the language of architecture, is laying that a column is a more agreeable figure than a pilaster; and for that reason, it ought to be preferred, all other circumstances being equal: another reason concurs, that a column annexed to a wall, which is a plain surface, makes a greater variety than a pilaster. There is an additional reason for rejecting pilasters in the external front of a building, arising from a principle unfolded above*, viz. a tendency in man, to advance every thing to its perfection as well as to its conclusion.

If,

* Chap. 8.

---
If, for example, I see a thing obscurely in a dim light and by disjointed parts, that tendency prompts me, out of the disjointed parts to compose an entire whole: I suppose it to be, for example, a horse; and my eyesight being obedient to the conjecture, I immediately perceive a horse, almost as distinctly as in day-light. This principle is applicable to the case in hand. The most superb front, at a great distance, appears a plain surface: approaching gradually, we begin to perceive inequalities: these inequalities, when we advance a few steps more, take on the appearance of pillars: but whether round or square, we are uncertain: our curiosity anticipating our progress, cannot rest in suspense: being prompted by the foresaid tendency to suppose the most complete pillar, or that which is the most agreeable to the eye, we immediately perceive, or seem to perceive, a number of columns: if upon a near approach we find pilasters only, the disappointment makes these pilasters appear disagreeable; when abstracted from that circumstance, they would only have appeared somewhat less agreeable. But as this deception cannot happen in the inner front inclosing a court, I see no reason for excluding pilasters there, when there is any cause for preferring them before columns.

With respect now to the parts of a column, a bare uniform cylinder without a capital, appears naked; and without a base, appears too ticklishly placed to stand firm*: it ought therefore to have some finishing at the top and at the bottom. Hence the three chief parts of a column, the shaft, the base, and the capital. Nature undoubtedly requires proportion among these parts, but it admits variety of proportion. I suspect that the proportions in use have been influenced in some degree by the human figure; the capital being conceived as the head, the base as the feet. With respect to the base; indeed, the principle of utility interposes to vary it from the

* A column without a base is disagreeable, because it seems in a tottering condition; yet a tree without a base is agreeable; and the reason is, that we know it to be firmly rooted. This observation shows how much taste is influenced by reflection.
the human figure: the base must be so proportioned to the whole, as to give the column the appearance of stability.

We find three orders of columns among the Greeks, the Doric, the Ionic, and the Corinthian, distinguished from each other by their destination as well as by their ornaments. It has been warmly disputed, whether any new order can be added to these: some hold the affirmative, and give for instances the Tuscan and Composite: others deny, and maintain that these properly are not distinct orders, but only the original orders with some slight variations. Among writers who do not agree upon any standard for distinguishing the different orders from each other, the dispute can never have an end. All I can find with respect to it of any importance, is what follows.

The only circumstances that can serve to distinguish one order from another, are the form of the column, and its destination. To make the first a distinguishing mark, without regard to the other, would multiply these orders without end; for a colour is not more susceptible of different shades, than a column is of different forms. Destination is more limited, as it leads us to distinguish columns into three kinds or orders; one plain and strong, for the purpose of supporting plain and massy buildings; one delicate and graceful, for supporting buildings of that character; and between these, one for supporting buildings of a middle character. This distinction, which regards the different purposes of a column, is not naturally liable to any objection, considering that it tends also to regulate the form, and in some measure the ornaments, of a column. To enlarge the division by taking in a greater variety of purposes, would be of little use, and, if admitted, would have no end; for from the very nature of the foregoing division, there can be no good reason for adding a fourth order, more than a fifth, a sixth, &c. without any possible description.

To illustrate this doctrine, I make the following observation. If we regard destination only, the Tuscan is of the same order with the Doric, and the Composite with
308 Gardening and Ch. XXIV.

with the Corinthian; but if we regard form merely, they are of different orders.

The ornaments of these three orders ought to be so contrived as to make them look like what they are intended for. Plain and rustic ornaments would be not a little discordant with the elegance of the Corinthian order, and ornaments sweet and delicate not less so with the strength of the Doric. For that reason, I cannot be altogether satisfied with the ornaments of the last-mentioned order: if they be not too delicate, they are at least too much multiplied for a pillar in which the character of utility prevails over that of beauty. The crowding of ornaments would be more sufferable in a column of an opposite character. But this is a slight objection, and I wish I could think the same of what follows. The Corinthian order has been the favourite of two thousand years, and yet I cannot force myself to relish its capital. The invention of this florid capital is ascribed to the sculptor Callimachus, who borrowed the hint from the plant Acanthus, growing round a basket placed accidentally upon it; and in fact the capital under consideration represents pretty accurately a basket so ornamented. This object, or its imitation in stone, placed upon a pillar, may look well; but to make it the capital of a pillar intended to support a building, must give this pillar an appearance inconsistent with its destination: an Acanthus, or any tender plant, may require support, but is altogether insufficient to support any thing heavier than a bee or a butterfly. This capital must also bear the weight of another objection: to represent a vine wreathing round a column with its root seemingly in the ground, is natural; but to represent an Acanthus, or any plant, as growing on the top of a column, is unnatural. The elegance of this capital did probably at first draw a vail over its impropriety; and now by long use it has gained an establishment, respected by every artist. Such is the force of custom, even in contradiction to nature!

It will not be gaining much ground to urge, that the basket, or vase if it be insufaced on, is understood to be the capital, and that the items and leaves of the plant are to be considered as ornaments merely; for, excepting
ing a plant, nothing can be a more improper support for a great building than a basket or vase even of the firm-est contexture.

With respect to buildings of every sort, one rule, dictated by utility, is, that they be firm and stable. Another rule, dictated by beauty, is, that they also appear so to the eye: for every thing that appears tottering and in hazard of tumbling down, produceth in the spectator the painful emotion of fear, instead of the pleasant emotion of beauty: and, accordingly, it is the great care of the artist, that every part of his edifice appear to be well supported. Procopius, describing the church of St Sophia in Constantinople, one of the wonders of the world, mentions with applause a part of the fabric placed above the east front in form of a half-moon, so contrived as to inspire both fear and admiration: for though, says he, it be perfectly well supported, yet it is suspended in such a manner as if it were to tumble down the next moment. This conceit is a sort of false wit in architecture, which men would naturally be fond of in the infancy of the fine arts. A turret jutting out from an angle in the uppermost story of a Gothic tower, is a witticism of the same kind.

To succeed in allegorical or emblematic ornaments, is no slight effort of genius; for it is extremely difficult to dispose them so in a building as to produce any good effect. The mixing them with realities, makes a miserable jumble of truth and fiction*. In a basso-relievo on Antonin's pillar, rain obtained by the prayers of a Christian legion, is expressed by joining to the group of soldiers a rainy Jupiter, with water in abundance falling from his head and beard. De Piles, fond of the conceit, carefully informs his reader, that he must not take this for a real Jupiter, but for a symbol which among the Pagans signified rain: he never once considers, that a symbol or emblem ought not to make part of a group representing real objects or real events, but be so detached, as even at first view to appear an emblem. But this is not all, nor the chief point: every emblem ought to be rejected that is not clearly expressive

* See chap. 20. sect. 5.
pessive of its meaning; for if it be in any degree obscure, it puzzles, and doth not please. The temples of Antient and Modern Virtue in the gardens of Stow, appear not at first view emblematical; and when we are informed that they are so, it is not easy to gather their meaning: the spectator sees one temple entire, another in ruins; but without an explanatory inscription, he may guess, but cannot be certain, that the former being dedicated to Antient Virtue, the latter to Modern Virtue, are intended a satire upon the present times. On the other hand, a trite emblem, like a trite simile, is disgusting *. Nor ought an emblem more than a simile to be founded on low or familiar objects; for if these be not agreeable as well as their meaning, the emblem upon the whole will not be relished. A room in a dwelling-house containing a monument to a deceased friend, is dedicated to Melancholy: it has a clock that strikes every minute, to signify how swiftly time passes—upon the monument, weeping figures and other hackney'd ornaments commonly found upon tomb-stones, with a stuff'd raven in a corner—verses on death, and other ferious subjects, inscribed all around. The objects are too familiar, and the artifice too apparent, to produce the intended effect †.

The statue of Moses striking a rock from which water actually issues, is also in a false taste; for it is mixing reality with representation. Moses himself may bring water out of the rock, but this miracle is too much for his statue. The same objection lies against a cascade where we see the statue of a water-god pouring out of his urn real water.

I am more doubtful whether the same objection lies against the employing statues of animals as supports, that

* See chap. 8.
† In the city of Mexico, there was a palace termed the house of Affliction, where Montezuma retired upon losing any of his friends, or upon any public calamity. This house was better adjusted to its destination: it inspired a sort of horror: all was black and dismal: small windows shut up with grates, scarce allowing passage to the light.
that of a Negro, for example, supporting a dial, statues of fish supporting a basin of water, Termes supporting a chimney-piece; for when a stone is used as a support, where is the incongruity, it will be said, to cut it into the form of an animal? But leaving this doubtful, another objection concurs. That such designs must in some measure be disagreeable, by the appearance of giving pain to a sensitive being.

It is observed above of gardening, that it contributes to rectitude of manners, by inspiring gaiety and benevolence. I add another observation, That both gardening and architecture contribute to the same end, by inspiring a taste for neatness and elegance. In Scotland, the regularity and polish even of a turnpike-road has some influence of this kind upon the low people in the neighbourhood. They become fond of regularity and neatness; which is display'd, first upon their yards and little inclosures, and next within doors. A taste for regularity and neatness thus acquired, is extended by degrees to dress, and even to behaviour and manners. The author of a history of Switzerland, describing the fierce manners of the plebeians of Bern three or four centuries ago, continually inured to success in war, which made them insolently aim at a change of government, in order to establish a pure democracy, observes, that no circumstance tended more to sweeten their manners, and to make them fond of peace, than the public buildings carried on by the senate for ornamenting their capital; particularly a fine town-house, and a magnificent church, which to this day, says our author, stands as one of the finest in Europe.

CHAP. XXV. Standard of Taste.

"That there is no disputing about taste," meaning taste in its figurative as well as proper sense, is a saying so generally received as to have become a proverb. One thing even at first view is evident, that if the proverb hold true with respect to taste in its proper meaning, it must hold equally true with respect to our other external senses: if the pleasures of the palate disdain a comparative trial, and reject all criticism, the pleasures
pleasures of touch, of smell, of sound, and even of sight, must be equally privileged. At that rate, a man is not within the reach of censure, even where he prefers the Saracen's head upon a sign-post before the best tablature of Raphael, or a rude Gothic tower before the finest Grecian building; or where he prefers the smell of a rotten carcass before that of the most odoriferous flower, or jarring discords before the most exquisite harmony.

But we cannot stop here. If the pleasures of external sense be exempted from criticism, why not every one of our pleasures, from whatever source derived? If taste in its proper sense cannot be disputed, there is as little room for disputing it in its figurative sense. The proverb accordingly comprehends both; and in that large sense may be resolved into the following general proposition, That with respect to the perceptions of sense, by which some objects appear agreeable some disagreeable, there is not such a thing as a good or a bad, a right or a wrong; that every man's taste is to himself an ultimate standard without appeal; and consequently that there is no ground of censure against any one, if such a one there be, who prefers Blackmore before Homer, selfishness before benevolence, or cowardice before magnanimity.

The proverb in the foregoing examples is indeed carried very far: it seems difficult, however, to sap its foundation, or with success to attack it from any quarter: for is not every man equally a judge of what ought to be agreeable or disagreeable to himself? doth it not seem whimsical, and perhaps absurd, to assert, that a man ought not to be pleased when he is, or that he ought to be pleased when he is not?

This reasoning may perplex, but will never afford conviction: every one of taste will reject it as false, however unqualified to detect the fallacy. At the same time, though no man of taste will assent to the proverb as holding true in every case, no man will affirm that it holds true in no case: objects there are, undoubtedly, that we may like or dislike indifferently, without any imputation upon our taste. Were a philosopher to make a scale for human pleasures, he would not think of making
ing divisions without end; but would rank together many pleasures arising perhaps from different objects, either as equally conducing to happiness, or differing so imperceptibly as to make a separation unnecessary. Nature hath taken this course, at least it appears so to the generality of mankind. There may be subdivisions without end; but we are only sensible of the graver divisions, comprehending each of them various pleasures equally affecting: to these the proverb is applicable in the strictest sense; for with respect to pleasures of the same rank, what ground can there be for preferring one before another? if a preference in fact be given by any individual, it cannot proceed from taste, but from custom, imitation, or some peculiarity of mind.

Nature, in her scale of pleasures, has been sparing of divisions: she hath wisely and benevolently filled every division with many pleasures; in order that individuals may be contented with their own lot, without envying that of others. Many hands must be employed to procure us the conveniencies of life; and it is necessary that the different branches of business, whether more or less agreeable, be filled with hands: a taste too refined, would obstruct that plan; for it would crowd some employments, leaving others, not less useful, totally neglected. In our present condition, lucky it is, that the plurality are not delicate in their choice, but fall in readily with the occupations, pleasures, food, and company, that fortune throws in their way; and if at first there be any displeasing circumstance, custom soon makes it easy.

The proverb will hold true as to the particulars now explained; but when apply'd in general to every subject of taste, the difficulties to be encountered are insuperable. We need mention no other but the difficulty that arises from human nature itself? do we not talk of a good and a bad taste? of a right and a wrong taste? and upon that supposition, do we not, with great confidence, censure writers, painters, architects, and every one who deals in the fine arts? Are such criticisms absurd, and void of common sense? have the foregoing expressions, familiar in all languages and among all people, no sort of meaning? This can hardly be; for what
314 Standard of Taste. Ch. XXV.

what is universal, must have a foundation in nature. If we can reach that foundation, the standard of taste will no longer be a secret.

We have a sense or conviction of a common nature, not only in our own species, but in every species of animals: and our conviction is verified by experience; for there appears a remarkable uniformity among creatures of the same kind, and a deformity not less remarkable among creatures of different kinds. This common nature is conceived to be a model or standard for each individual that belongs to the kind. Hence it is a matter of wonder, to find an individual deviating from the common nature of the species, whether in its internal or external construction: a child born with aversion to its mother's milk, is a wonder, not less than if born without a mouth, or with more than one.* This conviction of a common nature in every species, paves the way finely for distributing things into genera and species; to which we are extremely prone, not only with regard to animals, and perhaps vegetables, where nature has led the way, but also with regard to many other things where there is no ground for such distribution, but fancy merely.

With respect to the common nature of man, in particular, we have a conviction that it is invariable not less than universal; that it will be the same hereafter as at present, and as it was in time past; the same among all nations and in all corners of the earth. Nor are we deceived; because, giving allowance for the difference of culture and gradual refinement of manners, the fact corresponds to our conviction.

We are so constituted as to conceive that this common nature, is not only invariable, but also perfect or right; and consequently that individuals ought to be made conformable to it. Every remarkable deviation from the standard, makes accordingly an impression upon us of imperfection, irregularity, or disorder: it is disagreeable, and raises in us a painful emotion: monstrous births, exciting the curiosity of a philosopher, fail

* See essays on morality and natural religion, part 1. essay 2. ch. 1.
fail not at the same time to excite aversion in a high degree.

This conviction of a common nature or standard, and of its perfection, accounts clearly for that remarkable conception we have, of a right and a wrong sense or taste in morals. It accounts not less clearly for the conception we have of a right and a wrong sense or taste in the fine arts. A man who rejects objects generally agreeable, and delights in objects generally disagreeable, is condemned as a monster: we disapprove his taste as bad or wrong, because we have a clear conception that he deviates from the common standard. If man were so framed as not to have any notion of a common standard, the proverb mentioned in the beginning would hold universally, not only in the fine arts, but in morals: upon that supposition, the taste of every man, with respect to both, would to himself be an ultimate standard. But as the conviction of a common standard is universal, and a branch of our nature, we intuitively conceive a taste to be right or good if conformable to the common standard, and wrong or bad if disconformable.

No particular in human nature is more universal, than the uneasiness a man feels when in matters of importance his opinions are rejected by others: why should difference in opinion create uneasiness, more than difference in stature, in countenance, or in dress? The conviction of a common standard explains the mystery: every man, generally speaking, taking it for granted that his opinions agree with the common sense of mankind, is therefore disgusted with those who think differently, not as differing from him, but as differing from the common standard: hence in all disputes, we find the parties, each of them equally, appealing constantly to the common sense of mankind as the ultimate rule or standard. With respect to points arbitrary or indifferent, which are not supposed to be regulated by any standard, individuals are permitted to think for themselves with impunity: the same liberty is not indulged with respect to points that are reckoned of moment; for what reason, other than that the standard by which these are regulated, ought, as we judge, to produce an uniformity of opinion in all men? In a word, to this
conviction of a common standard must be wholly attributed the pleasure we take in those who espouse the same principles and opinions with ourselves, as well as the aversion we have at those who differ from us. In matters left indifferent by the standard, we find nothing of the same pleasure or pain; a bookish man, unless swayed by convenience, relisheth not the contemplative man more than the active; his friends and companions are chosen indifferently out of either class; a painter consorts with a poet or musician, as readily as with those of his own art; and one is not the more agreeable to me for loving beef, as I do, nor the less agreeable for preferring mutton.

I have ventured to say, that my disgust is raised, not by differing from me, but by differing from what I judge to be the common standard. This point, being of importance, ought to be firmly established. Men, it is true, are prone to flatter themselves, by taking it for granted that their opinions and their taste are in all respects conformable to the common standard; but there may be exceptions, and experience shows there are some: there are instances without number, of persons who cling to the grogger amusements of gaming, eating, drinking, without having any relish for the more elegant pleasures, such, for example, as are afforded by the fine arts; yet these very persons, talking the same language with the rest of mankind, pronounce in favour of the more elegant pleasures; and they invariably approve those who have a more refined taste, being ashamed of their own as low and sensual. It is in vain to think of giving a reason for this singular impartiality, other than the authority of the common standard with respect to the dignity of human nature*: and from the instances now given we discover, that the authority of that standard, even upon the most groveling souls, is so vigorous, as to prevail over self-partiality, and to make them despise their own taste compared with the more elevated taste of others.

Uniformity of taste and sentiment resulting from our conviction of a common standard, leads to two important

* See chap. 11.
Ch. XXV. Standard of Taste.

317

Ch. XXV. Standard of Taste.

317

tant final causes; the one respecting our duty, the other our pastime. Barely to mention the first shall be suffi-
cient, because it does not properly belong to the pre-
fent undertaking. Unhappy it would be for us did not
this uniformity prevail in morals: that our actions should
uniformly be directed to what is good and against what
is ill, is the greatest blessing in society; and in order to
uniformity of action, uniformity of opinion and senti-
ment is indispensible.

With respect to pastime in general, and the fine arts
in particular, the final cause of uniformity is illustrious.
Uniformity of taste gives opportunity for sumptuous
and elegant buildings, for fine gardens, and extensive
embellishments, which please universally: and the rea-
son is, that without uniformity of taste, there could
not be any suitable reward, either of profit or honour,
to encourage men of genius to labour in such works,
and to advance them toward perfection. The same un-
iformity of taste is equally necessary to perfect the arts
of music, sculpture, and painting; and to support the
expense they require after they are brought to perfec-
tion. Nature is in every particular consistent with her-
sel: we are framed by Nature to have a high relish
for the fine arts, which are a great source of happiness,
and extremely friendly to virtue: we are, at the same
time, framed with uniformity of taste, to furnish pro-
per objects for that high relish; and if uniformity did
not prevail, the fine arts could never have made any
figure.

And this suggests another final cause, not less illu-
strious. The separation of men into different classes,
by birth, office, or occupation, however necessary, tends
to relax the connection that ought to be among mem-
bers of the same state; which bad effect is in some
measure prevented by the access all ranks of people
have to public spectacles, and to amusements that are
best enjoy'd in company. Such meetings, where every
one partakes of the same pleasures in common, are no
slight support to the social affections.

Thus, upon a conviction common to the species, is
erected a standard of taste, which without hesitation is
apply'd to the taste of every individual. That stand-

O 2

ard,
ard, ascertaining what actions are right what wrong, what proper what improper, hath enabled moralists to establish rules for our conduct from which no person is allow’d to swerve. We have the same standard for ascertaining in all the fine arts, what is beautiful or ugly, high or low, proper or improper, proportioned or disproportionate: and here, as in morals, we justly condemn every taste that deviates from what is thus ascertained by the common standard.

That there exists a rule or standard in nature for trying the taste of individuals, in the fine arts as well as in morals, is a discovery; but is not sufficient to complete the task undertaken. A branch still more important remains upon hand; which is, to ascertain what is truly the standard of nature, that we may not lie open to have a false standard imposed on us. But what means shall be employ’d for bringing to light this natural standard? This is not obvious: for when we have recourse to general opinions and general practice, we are betray’d into endless perplexities. History informs us, that nothing is more variable than taste in the fine arts: judging by numbers, the Gothic taste of architecture must be preferred before that of Greece, and the Chinese taste probably before either: it would be endless to recount the various tastes that have prevailed in different ages with respect to gardening, and still prevail in different countries: despising the modest colouring of nature, women of fashion in France daub their cheeks with a red powder: nay, an unnatural swelling in the neck, peculiar to the inhabitants of the Alps, is relished by that people. But we ought not to be discouraged with such untoward instances, when we find not greater uniformity in moral opinions: was it not among some nations held lawful for a man to sell his children for slaves, to expose them in their infancy to wild beasts, and to punish them for the crime of their parents? was any thing more common than to murder an enemy in cold blood? nay more, did not law once authorize the abominable practice of human sacrifices, not less inipious than immoral? Such aberrations from the rules of morality prove only, that men, originally savage and brutal, acquire not rationality nor any delicacy
licacy of taste till they be long disciplined in society. To ascertain the rules of morality, we appeal not to the common sense of savages, but of men in their more perfect state: and we make the same appeal in forming the rules that ought to govern the fine arts: in neither can we safely rely on a local or transitory taste; but on what is the most universal and the most lasting among polite nations.

In this very manner, a standard for morals has been ascertained with a good deal of accuracy, and is daily apply'd by able judges with general satisfaction. The standard of taste in the fine arts, is not yet brought to such perfection; and we can account for its slower progress. The sense of right and wrong in actions is vivid and distinct, because its objects are clearly distinguishable from each other; whereas the sense of right and wrong in the fine arts is faint and wavering, because its objects are commonly not so clearly distinguishable from each other. And there appears to me a striking final cause in thus distinguishing the moral sense from the sense of right and wrong in the fine arts. The former, as a rule of conduct, and as a law we ought to obey, must be clear and authoritative. The latter is not intituled to the same privilege, because it contributes to our pleasure and amusement only: were it strong and lively, it would usurp upon our duty, and call off the attention from matters of greater moment: were it clear and authoritative, it would banish all difference of taste, leaving no distinction between a refined taste and one that is not so; which would put an end to rivalry, and consequently to all improvement.

But to return to our subject: However languid and cloudy the common sense of mankind may be as to the fine arts, it is notwithstanding the only standard in these as well as in morals. True it is indeed, that in gathering the common sense of mankind, more circumspetion is requisite with respect to the fine arts than with respect to morals: upon the latter, any person may be consult ed; but as to the former, a wary choice is necessary, for to collect votes indifferently would certainly mislead us. Tho' those who depend for food on bodily labour, are totally void of taste; of such a taste at least as can be
of use in the fine arts. This consideration bars the greater part of mankind; and of the remaining part, many by a corrupted taste are unqualified for voting. The common sense of mankind must then be confined to the few that fall not under these exceptions. But as such selection seems to throw matters again into uncertainty, we must be more explicit upon this branch of our subject.

Nothing tends more than voluptuousness to corrupt the whole internal frame, and to vitiate our taste, not only in the fine arts, but even in morals: voluptuousness never fails, in course of time, to extinguish all the sympathetic affections, and to bring on a beastly selfishness, which leaves nothing of man but the shape: about excluding such persons there will be no dispute. Let us next bring under trial, the opulent who delight in expence: richesrouse the appetite for superiority and respect; which in that case is vented upon costly furniture; numerous attendants, a princely dwelling, sumptuous feasts, every thing superb and gorgeous, to amaze and humble all beholders: simplicity, elegance, propriety, and things natural, sweet, or amiable, are despised or neglected; for these are not appropriated to the rich, nor make a figure in the public eye; in a word, nothing is relished, but what serves to gratify pride, by an imaginary exaltation of the possessor above those who surround him. Such sentiments contract the heart, and make every principle give way to self-love: benevolence and public spirit, with all their refined emotions, are little felt, and lefts regarded; and if these be excluded, there can be no place for the faint and delicate emotions of the fine arts.

The exclusion of classes so many and numerous, reduces within a narrow compass those who are qualified to be judges in the fine arts. Many circumstances are necessary to form such an judge: there must be a good natural taste; that is, a taste approaching, at least in some degree, to the delicacy of taste above described *: that taste must be improved by education, reflection,
and experience*: it must be preserved alive in a regular course of life, by using the goods of fortune with moderation, and by following the dictates of improved nature, which give welcome to every rational pleasure without deviating into excess. This is the tenor of life which of all contributes the most to refinement of taste; and the same tenor of life contributes the most to happiness in general.

If there appear much uncertainty in a standard that requires so painful and intricate a selection, we may possibly be reconciled to it by the following consideration,

* That these particulars are useful, it may be said necessary, for acquiring a discerning taste in the fine arts, will appear from the following facts, which show the influence of experience singly. Those who live in the world and in good company, are quick sighted with respect to every defect or irregularity in behaviour: the very slightest singularity in motion, in speech, or in dress, which to a peasant would be invisible, escapes not their observation. The most minute differences in the human countenance, so minute as to be far beyond the reach of words, are distinctly perceived by the plainest person; while, at the same time, the generality have very little discernment in the faces of other animals to which they are less accustomed: sheep, for example, appear to have all the same face, except to the shepherd, who knows every individual in his flock, as he does his relations and neighbours. The very populace in Athens were critics in language, in pronunciation, and even in eloquence, harangues being their daily entertainment. In Rome, at present, the most illiterate shopkeeper is a better judge of statues and of pictures, than persons of the highest education in London. These facts afford convincing evidence, that a discerning taste depends still more on experience than on nature. But these facts merit peculiar regard for another reason, that they open to us a sure method for improving our taste in the fine arts; which, with respect to those who have leisure for improvements, ought to be a powerful incitement to cultivate a taste in these arts: an occupation that cannot fail to embellish their manners, and to sweeten society.
tion, That, with respect to the fine arts, there is less difference of taste than is commonly imagined. Nature hath marked all her works with indelible characters of high or low, plain or elegant, strong or weak: these, if at all perceived, are seldom misapprehended; and the same marks are equally perceptible in works of art. A defective taste is incurable; and it hurts none but the possessor, because it carries no authority to impose upon others. I know not if there be such a thing as a taste naturally bad or wrong; a taste, for example, that prefers a groveling pleasure before one that is high and elegant: groveling pleasures are never preferred; they are only made welcome by those who know no better. Differences about objects of taste, it is true, are endless: but they generally concern trifles, or possibly matters of equal rank, where preference may be given either way with impunity: if, on any occasion, persons differ where they ought not, a depraved taste will readily be discovered on one or other side, occasioned by imitation, custom, or corrupted manners, such as are described above. And considering that every individual partakes of a common nature, what is there that should occasion any wide difference in taste or sentiment? By the principles that constitute the sensitive part of our nature, a wonderful uniformity is preserved in the emotions and feelings of the different races of men; the same object making upon every person the same impression, the same in kind, if not in degree. There have been, as above observed, aberrations from these principles; but soon or late they prevail, and restore the wanderer to the right road.

And this leads to the only remaining mean that occurs to me for ascertaining the common sense of mankind; and let it be observed, that I throw it out, not in despair, but in great confidence of success. As the taste of every individual ought to be governed by the principles above mentioned, an appeal to these principles must necessarily be decisive of every controversy that can arise upon matters of taste. In general, every doubt with relation to the common sense of man, or standard of taste, may be cleared by the same appeal: and to unfold these principles is the declared purpose of the present undertaking.
APPENDIX.

TERMS DEFINED OR EXPLAINED.

1. Every thing we perceive or are conscious of, whether a being or a quality, a passion or an action, is with respect to the perceiving person termed an object. Some objects appear to be internal, or within the mind; passion, for example, thinking, volition: some external; such as every object of sight, of hearing, of smell, of touch, of taste.

2. That act of the mind which makes known to me an external object, is termed perception. That act of the mind which makes known to me an internal object is termed consciousness. The power or faculty from which consciousness proceeds, is termed an internal sense. The power or faculty from which perception proceeds, is termed an external sense. This distinction refers to the objects of our knowledge; for the senses, whether external or internal, are all of them powers or faculties of the mind.

3. But as self is an object that cannot be termed either external or internal, the faculty by which I have knowledge of myself, is a sense that cannot properly be termed either internal or external.

4. By the eye we perceive figure, colour, motion; &c.: by the ear we perceive the different qualities of sound, high, low, loud, soft: by touch we perceive rough, smooth, hot, cold, &c.: by taste we perceive sweet, sour, bitter, &c.: by smell we perceive fragrant, fetid, &c. These qualities partake the common nature of all qualities, that they are not capable of an independent existence, but must belong to some being of which they are properties. A being with respect to its qualities is termed a subject, or substratum; because it supports its qualities, which are spread, as it were, upon it. Every substratum of visible qualities, is termed substance, and of tangible qualities, body.

5. Substance and sound are perceived existing at a distance from the organ; often at a considerable distance. But smell, touch, and taste, are perceived as existing at the organ of sense.

O 5

6. All.
6. All the objects of internal sense are attributed: witness deliberation, reasoning, resolution, willing, consenting, which are internal actions; as also passions and emotions, which are internal agitations. With regard to the former, I am conscious of being active; with regard to the latter, I am conscious of being passive.

7. Again, we are conscious of internal action as in the head; of passions and emotions as in the heart.

8. Many actions may be exerted internally, and many effects produced, of which we are not conscious: when we investigate the ultimate cause of the motion of the blood, and of other internal motions upon which life depends, it is the most probable opinion that some internal power is the cause; and if so, we are so far unconscious of the operations of that power. But consciousness being imply'd in the very meaning of deliberating, reasoning, resolving, willing, consenting, such operations cannot escape our knowledge. The same is the case of passions and emotions; for no internal agitation is denominated a passion or emotion, but what we are conscious of.

9. The mind is not always the same: by turns it is cheerful, melancholy, calm, peevish, &c. These differences may not improperly be denominated tones. An object, by making an impression, produces an emotion, or passion, which again gives the mind a certain tone suited to it.

10. Perception and sensation are commonly reckoned synonymous terms, signifying that internal act by which external objects are made known to us. Perceiving is a general term for hearing, seeing, tasting, touching, smelling; and therefore perception signifies every internal act by which we are made acquainted with external objects: thus we are said to perceive a certain animal, a certain colour, sound, taste, smell, &c. Sensation properly signifies that internal act by which we are made conscious of pleasure or pain felt at the organ of sense: thus we have a sensation of the pleasure arising from warmth, from a fragrant smell, from a sweet taste; and of the pain arising from a wound, from a fetid smell, from a disagreeable taste. In perception, my attention is fixed upon the external object: in sensation, it is fixed upon the pleasure or pain I feel.
The terms *perception* and *sensation* are sometimes employ'd to signify the objects of perception and sensation. Perception in that sense is a general term for every external thing we perceive; and sensation a general term for every pleasure and pain felt at the organ of sense.

11. Conception is different from perception. The latter includes a conviction of the reality of its object: the former does not; for I can conceive the most extravagant stories told in a romance, without having any conviction of their reality. Conception differs also from imagination. By the power of fancy I can imagine a golden mountain, or an ebony ship with sails and ropes of silk. When I describe a picture of that kind to another, the idea he forms of it is termed a conception. Imagination is active, conception is passive.

12. Feeling, besides denoting one of the external senses, is a general term, signifying that internal act by which we are made conscious of our pleasures and our pains; for it is not limited, as sensation is, to any one sense. Thus, feeling being the genus of which sensation is a species, their meaning is the same when apply'd to pleasure and pain felt at the organ of sense; and accordingly we say indifferently, "I feel pleasure from heat, and pain from cold," or, "I have a sensation of pleasure from heat, and of pain from cold." But the meaning of feeling, as is said, is much more extensive: it is proper to say, I feel pleasure in a sumptuous building, in love, in friendship; and pain in losing a child, in revenge, in envy: sensation is not properly apply'd to any of these.

The term *feeling* is frequently used in a less proper sense to signify what we feel or are conscious of; and in that sense it is a general term for all our passions and emotions, and for all our other pleasures and pains.

13. That we cannot perceive an external object till an impression be made upon our body, is probable from reason, and is ascertained by experience. But it is not necessary that we be made sensible of the impression: in touching, it is true, in tasting, and in smelling, we are sensible of the impression; but not in seeing and hearing. We know indeed from experiments, that before
fore we perceive a visible object, its image is spread upon the retina tunica; and that before we perceive a sound, an impression is made upon the drum of the ear: but we are not conscious either of the organic image or of the organic impression; nor are we conscious of any other operation preparatory to the act of perception: all we can say, is, that we see that river, or hear that trumpet.*

4. Objects once perceived may be recalled to the mind by the power of memory. When I recall an object of sight in that manner, it appears to me precisely as in the original survey, only more faint and obscure. For example, having seen yesterday a spreading oak growing on the brink of a river, I endeavour to recall these objects to my mind. How is this operation performed? Do I endeavour to form in my mind a picture of them or a representative image? Not so. I transport myself ideally to the place where I saw the tree and river yesterday; upon which I have a perception of these objects, similar in all respects to the perception I had when I viewed them with my eyes, only more obscure. And in this recollection, I am not conscious of a picture or a representative image, more than in the original survey: the perception is of the tree and river themselves, as at first. I confirm this by another experiment. After attentively surveying a fine statue, I close my eyes. What follows? The same object continues, without...
OR EXPLAINED.

without any difference but that it is less distinct than formerly *. This indistinct secondary perception of an object, 

* This experiment, which every one may make and reiterate till entire satisfaction be obtained, is of greater importance than at first view may appear; for it strikes at the root of a celebrated doctrine that for more than two thousand years has misled many philosophers. This doctrine as delivered by Aristotle is in substance, "That of every object of thought there must be in the mind some form, phantasm, or species; that things sensible are perceived and remembered by means of sensible phantasms, and things intelligible by intelligible phantasms; and that these species or phantasms have the form of the object without the matter, as the impression of a seal upon wax has the form of the seal without its matter." The followers of Aristotle add, "That the sensible and intelligible forms of things, are sent forth from the things themselves, and make impressions upon the passive intellect, which impressions are perceived by the active intellect." This notion differs very little from that of Epicurus, which is, "That all things send forth, constantly and in every direction, slender ghosts or films of themselves, (tenuia simulacra, as expressed by his commentator Lucretius); which striking upon the mind, are the means of perception, dreaming," &c. Des Cartes, bent to oppose Aristotle, rejects the doctrine of sensible and intelligible phantasms; maintaining however the same doctrine in effect, viz. That we perceive nothing external but by means of some image either in the brain or in the mind: and these images he terms ideas. According to these philosophers, we perceive nothing immediately but phantasms or ideas; and from these we infer, by reasoning, the existence of external objects. Locke, adopting this doctrine, employs almost the whole of his book about ideas. He holds, that we cannot perceive, remember, nor imagine, any thing, but by having an idea or image of it in the mind. He agrees with Des Cartes, that we can have no knowledge of things external but what we acquire by reasoning upon their ideas or images in the mind;
object, is termed an idea. And therefore the precise and accurate definition of an idea, in contradistinction to an original perception, is, "That perception of a
real mind; taking it for granted, that we are conscious of these ideas or images, and of nothing else. Those who talk the most intelligibly explain the doctrine thus: When I see in a mirror a man standing behind me, the immediate object of my sight is his image, without which I could not see him: in like manner, when I see a tree or a house, there must be an image of these objects in my brain or in my mind; which image is the immediate object of my perception; and by means of that image I perceive the external object.

One would not readily suspect any harm in this ideal system, other than the leading us into a labyrinth of metaphysical errors in order to account for our knowledge of external objects, which is more truly and more simply accounted for by direct plain perception. And yet some late writers have been able to extract from it death and destruction to the whole world, levelling all down to a mere chaos of ideas. Dr Berkeley, upon authority of the philosophers named, taking for granted that we cannot perceive any object but what is in the mind, discovered, that the reasoning employ'd by Des Cartes and Locke to infer the existence of external objects, is inconclusive; and upon that discovery ventured, against common sense, to annihilate totally the material world. And a later writer discovering that Berkeley's arguments might with equal success be applied against immaterial beings, ventures still more boldly to reject by the lump the immaterial world as well as the material; leaving nothing in nature but images or ideas floating in vacuo, without affording them a single mind for shelter or support.

When such wild and extravagant consequences can be drawn from the ideal system, it might have been expected, that no man who is not crazy would have ventured to erect such a superstructure, till he should first be certain beyond all doubt of a solid foundation. And yet upon examination, we find the foundation of this terrible doctrine:
real object which is raised in the mind by the power "of memory." Every thing we have any knowledge of, whether internal or external, passions, emotions, thinking

doctrine to be no better than a shallow metaphysical argument, viz. "That no being can act but where it is; "and, consequently, that it cannot act upon any sub-
"ject at a distance." This argument possestes indeed one eminent advantage, that its obscurity, like that of an oracle, is apt to impose upon the reader, who is willing to consider it as a demonstration, because he does not clearly see the fallacy. The best way to give it a fair trial, is to draw it out of its obscurity, and to state it in a clear light, as follows. "No subject can be perceived "unless it act upon the mind; but no distant subject can "act upon the mind, because no being can act but "where it is; and, therefore, the immediate object of "perception must be something united to the mind, so "as to be able to act upon it." Here the argument completed in all its parts seems to be justly stated; and from it is derived the supposed necessity of phantasms or ideas united to the mind, as the only objects of perception. It is singularly unlucky for this argument, that it concludes directly against the very system of which it is the only foundation; for how can phantasms or ideas be raised in the mind by things at a distance, if things at a distance cannot act upon the mind? I say more, that it assumes a proposition as true, without evidence, viz. That no distant subject can act upon the mind. This proposition undoubtedly requires evidence, for it is not intuitively certain. And, therefore, till the proposition be demonstrated, every man without scruple may rely upon the conviction of his senses, that he hears and sees things at a distance.

But I venture a bolder stroke, which is, to shew that the proposition is false. Admitting that no being can act but where it is, is there any thing more simple or more common, than the acting upon subjects at a distance by intermediate means? This holds in fact with respect both to seeing and hearing. When I see a tree, for example, rays of light are reflected from the tree to my eye,
Terms defined

thinking, resolving, willing, heat, cold, &c. as well as external objects, may be recalled as above, by the power of memory *.

15. The original perceptions of external objects, are either simple or complex. Some sounds are so simple as not to be resolvable into parts, and the perception of such eye, forming a picture upon the retina tunica: but the object perceived is the tree itself, not the rays of light, nor the picture. In this manner distant objects are perceived, without any action of the object upon the mind, or of the mind upon the object. Hearing is in a similar case: the air put in motion by thunder, makes an impression upon the drum of the ear; but this impression is not what I hear, it is the thunder itself by means of that impression.

With respect to vision in particular, we are profoundly ignorant by what means and in what manner the picture on the retina tunica contributes to produce a sight of the object. One thing only is clear, that as we have no knowledge of that picture, it is as natural to conceive that it should be made the instrument of discovering the external object, and not itself, as of discovering itself only, and not the external object.

Upon the chimerical consequences drawn from the ideal system, I shall make but a single reflection. Nature determines us necessarily to rely on the veracity of our senses; and upon their evidence the existence of external objects is to us a matter of intuitive knowledge and absolute certainty. Vain therefore is the attempt of Dr. Berkeley and of his followers, to deceive us, by a metaphorical subtilty, into a disbelief of what we cannot entertain even the slightest doubt.

* From this definition of an idea, the following proposition must be evident, That there can be no such thing as an innate idea. If the original perception of an object be not innate, which is obvious, it is not less obvious, that the idea or secondary perception of that object cannot be innate. And yet, to prove this self-evident proposition, Locke has belaboured a whole book of his treatise upon human understanding. So necessary it is to give:
such sounds must be equally so: the like with respect to the perception of certain tastes and smells. A perception of touch, is generally compounded of the more simple perceptions of hardness or softness, joined with smoothness or roughness, heat or cold, &c. But of all the perceptions of external sense, that of a visible object is the most complex; because the eye takes in more particulars than any other organ. A tree is composed of a trunk, branches, leaves; it has colour, figure, size.

Every one of these separately produceth a perception in the mind of the spectator, which are all combined into the complex perception of the tree.

16. The original perception of an object of sight, is more complete, lively, and distinct, than that of any other object. And for that reason, an idea or secondary perception of a visible object, is also more complete, lively, and distinct, than that of any other object. A fine passage in music, may, for a moment, be recalled to the mind with tolerable accuracy; but, after the shortest interval, it becomes not less obscure than the ideas of the other objects mentioned.

17. As the range of an individual is commonly within narrow bounds of space, it rarely happens, that every thing necessary to be known comes under our own perceptions; which therefore are a provision too scanty for the purposes of life. Language is an admirable contrivance for supplying that deficiency; for by language every man may communicate his perceptions to all; and the same may be done by painting and other imitative arts. The facility of communication is in proportion to the liveliness of the ideas; especially in language, which hitherto has not arrived at greater perfection than to express clear and lively ideas: and hence it is, that poets and orators, who are extremely successful in describing objects of sight, find objects of the other
give accurate definitions, and so preventive of dispute are definitions when accurate. Dr Berkeley has taken great pains to prove another proposition equally evident, That there can be no such thing as a general idea: all our original perceptions are of particular objects, and our secondary perceptions or ideas must be equally so.
other senses too faint and obscure for language. An idea thus acquired of an object at second hand, ought to be distinguished from an idea of memory, though their resemblance has occasioned the same term idea to be apply'd to both; which is to be regretted, because ambiguity in the signification of words is a great obstruction to accuracy of conception. Thus Nature hath furnished the means of multiplying ideas without end, and of providing every individual with a sufficient stock to answer, not only the necessities, but even the elegancies of life.

18. Further, man is endued with a sort of creative power: he can fabricate images of things that have no existence. The materials employ'd in this operation, are ideas of sight, which he can take to pieces and combine into new forms at pleasure: their complexity and vivacity make them fit materials. But a man hath no such power over any of his other ideas, whether of the external or internal senses: he cannot, after the utmost effort, combine these into new forms, being too obscure for that operation. An image thus fabricated cannot be called a secondary perception, not being derived from an original perception: the poverty of language however, as in the case immediately above mentioned, has occasioned the same term idea to be apply'd to all. This singular power of fabricating images without any foundation in reality, is distinguished by the name imagination.

19. As ideas are the chief materials employ'd in reasoning and reflecting, it is of consequence that their nature and differences be understood. It appears now, that ideas may be distinguished into three kinds; first, Ideas derived from original perceptions, properly termed ideas of memory; second, Ideas communicated by language or other signs; and, third, Ideas of imagination. These ideas differ from each other in many respects; but chiefly in respect that they proceed from different causes: the first kind is derived from real existences that have been objects of our senses: language is the cause of the second, or any other sign that has the same power with language: and a man's imagination is to himself the cause of the third. It is scarce necessary to
to add, that an idea, originally of imagination, being convey'd to others by language, or any other vehicle, becomes in their mind an idea of the second kind; and again, that an idea of this kind, being afterwards recalled to the mind, becomes in that circumstance an idea of memory.

20. We are not so constituted as to perceive objects with indifferentness: these, with very few exceptions, appear agreeable or disagreeable; and at the same time raise in us pleasant or painful emotions. With respect to external objects in particular, we distinguish those which produce organic impressions, from those which affect us from a distance. When we touch a soft and smooth body, we have a pleasant feeling as at the place of contact; which feeling we distinguish not, at least not accurately, from the agreeableness of the body itself; and the same holds in general with regard to all organic impressions. It is otherwise in hearing and seeing: a sound is perceived as in itself agreeable, and raises in the hearer a pleasant emotion; an object of sight appears in itself agreeable, and raises in the spectator a pleasant emotion. These are accurately distinguished: the pleasant emotion is felt as within the mind; the agreeableness of the object is placed upon the object, and is perceived as one of its qualities or properties. The agreeable appearance of an object of sight, is termed beauty; and the disagreeable appearance of such an object is termed ugliness.

21. But though beauty and ugliness, in their proper and genuine signification, are confined to objects of sight; yet in a more lax and figurative signification, they are apply'd to objects of the other senses: they are sometimes apply'd even to abstract terms; for it is not unusual to say, a beautiful theorem, a beautiful constitution of government.

22. A line composed by a single rule, is perceived and said to be regular: a straight line, a parabola, a hyperbola, the circumference of a circle, and of an ellipse, are all of them regular lines. A figure composed by a single rule, is perceived and said to be regular: a circle, a square, a hexagon, an equilateral triangle, are regular figures, being composed by a single rule that determines
determines the form of each. When the form of a line or of a figure is ascertained by a single rule that leaves nothing arbitrary, the line and the figure are said to be perfectly regular; which is the case of the figures now mentioned, and the case of a straight line and of the circumference of a circle. A figure and a line that require more than one rule for their construction, or that have any of their parts left arbitrary, are not perfectly regular: a parallelogram and a rhomb are less regular than a square; the parallelogram being subjected to no rule as to the length of sides, other than that the opposite sides be equal; the rhomb being subjected to no rule as to its angles, other than that the opposite angles be equal: for the same reason, the circumference of an ellipse, the form of which is susceptible of much variety, is less regular than that of a circle.

23. Regularity, properly speaking, belongs, like beauty, to objects of sight: and, like beauty, it is also apply'd figuratively to other objects: thus we say, a regular government, a regular composition of music, and, regular discipline.

24. When two figures are composed of similar parts, they are said to be uniform. Perfect uniformity is where the constituent parts of two figures are equal: thus two cubes of the same dimensions are perfectly uniform in all their parts. Uniformity less perfect is, where the parts mutually correspond, but without being equal: the uniformity is imperfect between two squares or cubes of unequal dimensions; and still more so between a square and a parallelogram.

25. Uniformity is also applicable to the constituent parts of the same figure. The constituent parts of a square are perfectly uniform: its sides are equal and its angles are equal. Wherein then differs regularity from uniformity? for a figure composed of uniform parts must undoubtedly be regular. Regularity is predicated of a figure considered as a whole composed of uniform parts: uniformity is predicated of these parts as related to each other by resemblance: we say, a square is a regular, not an uniform, figure; but with respect to the constituent parts of a square, we say not, that they are regular, but that they are uniform.
26 In things destined for the same use, as legs, arms, eyes, windows, spoons, we expect uniformity. Proportion ought to govern parts intended for different uses: we require a certain proportion between a leg and an arm; in the bale, the shaft, the capital of a pillar; and in the length, the breadth, the height of a room: some proportion is also required in different things intimately connected, as between a dwelling house, the garden, and the stables: but we require no proportion among things lightly connected, as between the table a man writes on and the dog that follows him. Proportion and uniformity never coincide: things equal are uniform; but proportion is never applied to them: thy four sides and angles of a square are equal and perfect, uniform; but we say not that they are proportionate. Thus, proportion always implies inequality or difference; but then it implies it to a certain degree only: the most agreeable proportion resembles a maximum in mathematics; a greater or less inequality or difference is less agreeable.

27. Order regards various particulars. First, in tracing or surveying objects, we are directed by a sense of order: we perceive it to be more orderly, that we should pass from a principal to its accessories, and from a whole to its parts, than in the contrary direction. Next, with respect to the position of things, a sense of order directs us to place together things intimately connected. Thirdly, in placing things that have no natural connexion, that order appears the most perfect where the particulars are made to bear the strongest relation to each other that position can give them. This parallelism is the strongest relation that position can bestow upon straight lines; if they be so placed as by production to intersect, the relation is less perfect. A large body in the middle, and two equal bodies of less size, one on each side, is an order that produces the strongest relation the bodies are susceptible of by position: the relation between the two equal bodies would be stronger by juxtaposition; but they would not both have the same relation to the third.

28. The beauty or agreeableness of a visible object, is perceived as one of its qualities; which holds, not only
only in the original perception, but also in the secondary perception or idea: and hence the pleasure that arises from the idea of a beautiful object. An idea of imagination is also pleasant, though in a lower degree than an idea of memory, where the objects are of the same kind; for an evident reason, that the former is more distinct and lively than the latter. But this inferiority in ideas of imagination, is more than compensated by their greatness and variety, which are boundless; for the imagination acting without control, can fabricate ideas of finer visible objects, of more noble and heroic actions, of greater wickedness, of more surprising events, than ever in fact existed; and in communicating such ideas by words, painting, sculpture, &c. the influence of the imagination is not less extensive than great.

29. In the nature of every man, there is somewhat original, that serves to distinguish him from others, that tends to form a character, and to make him meek or fiery, candid or deceitful, resolute or timorous, cheerful or morose. This original bent, termed disposition, must be distinguished from a principle: the latter, signifying a law of human nature, makes part of the common nature of man; the former makes part of the nature of this or that man. Propensity is a name common to both; for it signifies a principle as well as a disposition.

30. Affection, signifying a settled bent of mind toward a particular being or thing, occupies a middle place between disposition on the one hand, and passion on the other. It is clearly distinguishable from disposition, which being a branch of one's nature originally, must exist before there can be an opportunity to exert it upon any particular object; whereas affection can never be original, because having a special relation to a particular object, it cannot exist till the object have once at least been presented. It is not less clearly distinguishable from passion, which depending on the real or ideal presence of its object, vanishes with its object; whereas affection, once settled on a person, is a lasting connection; and, like other connections, subsists even when we do not think of the person. A familiar example will clear the whole. There may be in my mind a dif-
a disposition to gratitude, which, through want of an object, happens never to be exerted; and which therefore is never discovered even by myself. Another who has the same disposition, meets with a kindly office that makes him grateful to his benefactor: an intimate connection is formed between them, termed affection; which, like other connections, has a permanent existence, though not always in view. The affection, for the most part, lies dormant, till an opportunity offer of exerting it: in that circumstance, it is converted into the passion of gratitude; and the opportunity is greedily seized for testifying gratitude in the warmest manner.

31. Aversion, I think, is opposed to affection, and not to desire, as it commonly is. We have an affection to one person; we have an aversion to another: the former disposes us to do good to its object, the latter to do ill.

32. What is a sentiment? It is not a perception; for a perception signifies the act by which we become conscious of external objects. It is not consciousness of an internal action, such as thinking, suspending thought, inclining, resolving, willing, &c. Neither is it the conception of a relation amongst objects; a conception of that kind being termed opinion. The term sentiment is appropriated to such thoughts as are prompted by passion.

33. Attention is that state of mind which prepares one to receive impressions. According to the degree of attention, objects make a stronger or weaker impression*. Attention is requisite even to the simple act of seeing: the eye can take in a considerable field at one look; but no

* Bacon, in his natural history, makes the following observations. Sounds are meliorated by the intention of the sense, where the common sense is collected most to the particular sense of hearing, and the sight suspended. Therefore sounds are sweeter, as well as greater, in the night than in the day; and I suppose they are sweeter to blind men than to others: and it is manifest, that between sleeping and waking, when all the senses are bound and suspended, music is far sweeter than when one is fully waking.
no object in the field is seen distinctly, but that singly which fixes the attention; in a profound reverie that totally occupies the attention, we scarce see what is directly before us. In a train of perceptions, no particular object makes such a figure as it would do single and apart: for when the attention is divided among many objects, no particular object is intitled to a large share. Hence, the stillness of night contributes to terror, there being nothing to divert the attention:

Horror ubique animos, simul ipsa silentia terrent.

Aeneid. ii.

Zara. Silence and solitude are ev'ry where! Through all the gloomy ways and iron doors That hither lead, nor human face nor voice Is seen or heard. A dreadful din was wont. To grate the sense, when enter'd here, from groans And howls of slaves condemn'd, from clink of chains, And crash of rusty bars and creaking hinges: And ever and anon the night was dash'd With frightful faces and the meagre looks Of grim and ghastly executioners. Yet more this stillness terrifies my soul Than did that scene of complicated horrors. Mourning Bride, act 5. sc. 8.

And hence it is, that an object seen at the termination of a confined view, is more agreeable than when seen in a group with the surrounding objects:

The crow doth sing as sweetly as the lark When neither is attended; and, I think, The nightingale, if she should sing by day, When ev'ry goose is cackling, would be thought No better a musician than the wren. Merchant of Venice.

34. In matters of slight importance, attention is most- ly directed by will; and for that reason, it is our own fault if trifling objects make any deep impression. Had we power equally to with-hold our attention from matters of importance, we might be proof against any deep impression. But our power fails us here: an interesting object
object seizes and fixes the attention beyond the possibility of control; and while our attention is thus forcibly attached to one object, others may solicit for admission; but in vain, for they will not be regarded. Thus a small misfortune is scarce felt in presence of a greater:

Lear. Thou think'st 'tis much, that this contentious storm
Invades us to the skin; so 'tis to thee;
But where the greater malady is fix'd,
The lesser is scarce felt. Thou'dst then a bear;
But if thy flight lay tow'rd the roaring sea,
Thou'dst meet the bear i' th' mouth. When the mind's free,
The body's delicate: the tempest in my mind
Doth from my senses take all feeling else,
Save what beats there.

King Lear, act 3. sc. 5.

35. Genus, species, modification, are terms invented to distinguish beings from each other. Individuals are distinguished by their qualities: a number of individuals considered with respect to qualities that distinguish them from others, is termed a species: a plurality of species considered with respect to their distinguishing qualities, is termed a genus. That quality which distinguishes one genus, one species, or even one individual, from another, is termed a modification: thus the same particular that is termed a property or quality when considered as belonging to an individual, or a class of individuals, is termed a modification when considered as distinguishing the individual or the class from another: a black skin and soft curled hair, are properties of a negro: the same circumstances considered as marks that distinguish a negro from a man of a different species, are denominated modifications.

36. Objects of sight, being complex, are distinguishable into the several particulars that enter into the composition: these objects are all of them coloured; and they all have length, breadth, and thickness. When I behold a spreading oak, I distinguish in that object, size, figure, colour, and sometimes motion: viewing a flow-
Terms defined

ing river, I distinguish colour, figure, and constant motion: a dye has colour, black spots, six plain surfaces, all equal and uniform: Objects of touch have all of them extension: some of them are felt rough, some smooth: some of them are hard, some soft. With respect to the other senses, some of their objects are simple, some complex: a sound, a taste, a smell, may be so simple as not to be distinguishable into parts; others are perceived to be compounded of different sounds, different tastes, and different smells.

37. The eye at one look can grasp a number of objects, as of trees in a field, or men in a crowd: as these objects are distinct from each other, each having a separate and independent existence, they are distinguishable in the mind as well as in reality; and there is nothing more easy than to abstract from some and to confine our contemplation to others. A large oak with its spreading branches, fixes our attention upon itself, and abstracts us from the shrubs that surround it. In the same manner, with respect to compound sounds, tastes, or smells, we can fix our thoughts upon any one of the component parts, abstracting our attention from the rest. But the power of abstraction is not confined to objects that are separable in reality as well as mentally: it also takes place where there can be no real separation; the size, the figure, the colour, of a tree, are inseparably connected, and have no independent existence; the same of length, breadth, and thickness; and yet we can mentally confine our observations to one of these, neglecting or abstracting from the rest. Here abstraction takes place where there cannot be a real separation.

38. This power of abstraction is of great utility. A carpenter considers a log of wood with regard to hardness, firmness, colour, and texture: a philosopher, neglecting these properties, makes the log undergo a chemical analysis; and examines its taste, its smell, and its component principles: the geometrician confines his reasoning to the figure, the length, breadth, and thickness. In general, every artist, abstracting from all other properties, confines his observations to those which have a more immediate connection with his profession.

39. Hence
39. Hence clearly appears the meaning of an abstract term, and abstract idea. If in viewing an object we can abstract from some of its parts or properties and attach ourselves to others, there must be the same facility when we recall this object to the mind in idea. This leads directly to the definition of an abstract idea, viz. "A partial idea of a complex object, limited to " one or more of the component parts or properties, " laying aside or abstracting from the rest." A word that denotes an abstract idea, is called an abstract term.

40. The power of abstraction is bestowed upon man, for the purpose solely of reasoning. It tends greatly to the facility as well as clearness of any process of reasoning, that, withdrawing from every other circumstance, we can confine our attention to the single property we desire to investigate.

41. Abstract ideas, may, I think, be distinguished into three different kinds, all equally subservient to the reasoning faculty. Individuals appear to have no end; and did we not possess the faculty of distributing them into classes, the mind would be lost in an endless variety, and no progress be made in knowledge. It is by the faculty of abstraction that we distribute beings into genera and species: finding a number of individuals connected by certain qualities common to all, we give a name to these individuals considered as thus connected, which name, by gathering them together into one class, serves in a curt manner to express the whole of these individuals as distinct from others. Thus the word animal serves to denote every being which hath self-motion; and the words man, horse, lion, &c. answer similar purposes. This is the first and most common sort of abstraction; and it is of the most extensive use, by enabling us to comprehend in our reasoning whole kinds and sorts, instead of individuals without end. The next sort of abstract ideas and terms comprehends a number of individual objects considered as connected by some occasional relation. A great number of persons collected together in one place, without any other relation but merely that of contiguity, are denominated a crowd: in forming this term, we abstract from sex, from age, from condition, from dress, &c. A number of persons connected.
Terms defined, &c.

Connected by being subjected to the same laws and to the same government, are termed a nation: and a number of men subjected to the same military command, are termed an army. A third sort of abstraction is, where a single property or part, which may be common to many individuals, is selected to be the subject of our contemplation; for example, whiteness, heat, beauty, length, roundness, head, arm.

42. Abstract terms are a happy invention: it is by their means chiefly, that the particulars which we make the subject of our reasoning are brought into close union, and separated from all others however naturally connected. Without the aid of such terms, the mind could never be kept steady to its proper subject, but be perpetually in hazard of assuming foreign circumstances, or neglecting what are essential. We can, without the aid of language, compare real objects by intuition, when these objects are present; and, when absent, we can compare them in idea. But when we advance farther, and attempt to make inferences, and draw conclusions, we always employ abstract terms, even in thinking: it would be as difficult to reason without them, as to perform operations in algebra without signs; for there is scarce any reasoning without some degree of abstraction, and we cannot abstract to purpose without making use of abstract terms. Hence it follows, that without language man would scarce be a rational being.

43. The same thing, in different respects, has different names. With respect to certain qualities, it is termed a substance; with respect to other qualities, a body; and with respect to qualities of all sorts, a subject. It is termed a passive subject with respect to an action exerted upon it; an object with respect to a percipient; a cause with respect to the effect it produces; and an effect with respect to its cause.

A REPORT of some Proceedings on the Commission of Oyer and Terminer and Goal Delivery, for the Trial of the Rebels in the Year 1746, in the County of Surry, and of other Crown Causes. To which are added, Discourses upon a few Branches of the Crown Law. By Sir Michael Foster, Knt.

"The Subject of this Book is equally useful to the Law-Student, and entertaining to the Scholar or Gentleman. The Reports and Cases are stated with great Clearness and Brevity; and the judicious Compiler's Observations such as evince his Knowledge of the Crown-Law, and profound Reflection. The Discourses annexed to the Reports especially, demonstrate a Fund of good Sense and Knowledge; and the Remarks on some Passages in the History of the Crown Pleas, by the justly esteemed Lord Chief Justice Hale, are such as ought to be carefully perused by all who have been seduced into Notions unfavourable to the Principles of the present happy Establishment, by the Authority of so great a Writer and Lawyer.

"We cannot sufficiently recommend the learned Author's Discourses on High Treason, Manslaughter, Accomplices in Treason, or Aiders and Abettors in Felony, as opening all the Sources of Common and Statute Law, of the Laws of Nature, Principles of Morality and sound Reason.

"With Respect to the Utility of the Subject, he observes justly and modestly in his Preface, that it is calculated to remind Gentlemen of Rank and Character in the Profession, of what their own Reading and Experience may have suggested; and, at
at the same Time, to lead young Gentlemen into a right Method of arranging their Ideas, and reducing what they read or hear to the well known Principles of Law and sound Policy. We acknowledge ourselves throughout the Whole to have been much entertained and instructed in the Perusal, many of the Reports and Cases being of such a Nature, as cannot but strongly interest the Passions."

**Critical Review.**

The Life of Pope Sixtus the Fifth. (One of the most remarkable and entertaining Lives that is to be met with in Antient or Modern History). In which is included the State of England, France, Spain, Italy, the Swifs Cantons, Germany, Poland, Russia, Sweden, and the Low Countries, at that Time. With an Account of St. Peter's, the Conclave, and Manner of Chusing a Pope; the Vatican Library, the many Grand Obelisks, Aqueducts, Bridges, Hospitals, Palaces, Streets, Towns, and other noble Edifices, begun or finish'd by him. The Whole interspers'd with several Curious Incidents and Anecdotes, not to be met with in any other Author. Translated from the Italian of Gregorio Leti. With a Preface and Notes. By Ellis Farneworth, M. A. some time of Jesus College in Cambridge, and Chaplain to several of his Majesty's Ships, during the late War.
